### NEW QUESTION: 3

Fill in the blank: Permanent VPN tunnels can be set on all tunnels in the community, on all tunnels for specific gateways, or \_\_\_\_\_.

- A. On all satellite gateway to satellite gateway tunnels
- B. On specific tunnels for specific gateways
- C. On specific tunnels in the community
- D. On specific satellite gateway to central gateway tunnels

**Answer:** C ([LEAVE A REPLY](#))

Each VPN tunnel in the community may be set to be a Permanent Tunnel. Since Permanent Tunnels are constantly monitored, if the VPN tunnel is down, then a log, alert, or user defined action, can be issued. A VPN tunnel is monitored by periodically sending "tunnel test" packets. As long as responses to the packets are received the VPN tunnel is considered "up." If no response is received within a given time period, the VPN tunnel is considered "down." Permanent Tunnels can only be established between Check Point Security Gateways. The configuration of Permanent Tunnels takes place on the community level and:

**NEW QUESTION: 145**

Which product correlates logs and detects security threats, providing a centralized display of potential attack patterns from all network devices?

- A. SmartDashboard
- B. SmartEvent
- C. SmartView Monitor
- D. SmartUpdate

**Answer: (SHOW ANSWER)**

SmartEvent correlates logs from all Check Point enforcement points, including end-points, to identify suspicious activity from the clutter. Rapid data analysis and custom event logs immediately alert administrators to anomalous behavior such as someone attempting to use the same credential in multiple geographies simultaneously. **NEW QUESTION: 146**

Vanessa is attempting to log into the Gaia Web Portal. She is able to login successfully. Then she tries the same username and password for SmartConsole but gets the message in the screenshot image below. She has checked that the IP address of the Server is correct and the username and password she used to login into Gaia is also correct.

What is the most likely reason?

- A. SmartConsole Authentication is not allowed for Vanessa until a Super administrator has logged in first and cleared any other administrator sessions.
- B. Authentication failed because Vanessa's username is not allowed in the new Threat Prevention console update checks even though these checks passed with Gaia.
- C. Check Point Management software authentication details are not automatically the same as the Operating System authentication details. Check that she is using the correct details.
- D. Check Point R80 SmartConsole authentication is more secure than in previous versions and Vanessa requires a special authentication key for R80 SmartConsole. Check that the correct key details are used.

#### **NEW QUESTION: 147**

Which statement describes what Identity Sharing is in Identity Awareness?

- A. Management servers can acquire and share identities with Security Gateways
- B. Users can share identities with other users
- C. Security Gateways can acquire and share identities with other Security Gateways
- D. Administrators can share identities with other administrators

**Answer:** ([SHOW ANSWER](#))

Identity Sharing

Best Practice - In environments that use many Security Gateways and AD Query, we recommend that you set only one Security Gateway to acquire identities from a given Active Directory domain controller for each physical site. If more than one Security Gateway gets identities from the same AD server, the AD server can become overloaded with WMI queries.

Set these options on the Identity Awareness > Identity Sharing page of the Security Gateway object:
