

Cisco.300-740.v2025-01-02.q47

Exam Code:	300-740
Exam Name:	Designing and Implementing Secure Cloud Access for Users and Endpoints
Certification Provider:	Cisco
Free Question Number:	47
Version:	v2025-01-02
# of views:	400
# of Questions views:	470
https://www.freepdfdumps.com/Cisco.300-740.v2025-01-02.q47.html	

NEW QUESTION: 1

Cisco Secure Firewall provides advanced threat defense capabilities through:

- A. Focusing solely on internal traffic and ignoring external threats
- B. Only allowing traffic from trusted IP addresses
- C. Integrating with other security solutions for comprehensive protection
- D. Implementing basic firewall rules that do not adapt over time

Answer: C (LEAVE A REPLY)

NEW QUESTION: 2

Open Telemetry is used for:

- A. Gathering and exporting telemetry data in a vendor-agnostic way
- B. Reducing the visibility into application performance
- C. Limiting the scope of security investigations
- D. Increasing the dependency on proprietary tools

Answer: A (LEAVE A REPLY)

NEW QUESTION: 3

Endpoint posture policies are implemented to ensure that:

- A. Users can access any resource without restrictions
- B. All users have administrative access
- C. Devices are charged before use
- D. Devices meet certain security criteria before accessing resources

Answer: (SHOW ANSWER)

NEW QUESTION: 4

After containing a cybersecurity threat, the next step is to _____ the damage or vulnerability to prevent future incidents.

- A. remediate
- B. overlook
- C. escalate
- D. exacerbate

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 5

A converged multicloud policy allows organizations to:

- A. Avoid using public cloud services
- B. Implement different security policies for each cloud provider
- C. Focus solely on on-premises security
- D. Achieve consistent security and compliance across multiple cloud environments

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 6

The primary purpose of using a web application firewall (WAF) is to:

- A. Increase website loading times
- B. Protect web applications from vulnerabilities and attacks like SQL injection and XSS
- C. Limit the number of users accessing a web application
- D. Monitor the content that users post on the web application

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 7

In the context of cloud security, which of the following is a recommended mitigation strategy against account takeover attacks?

- A. Implementation of multi-factor authentication (MFA)
- B. Use of simple passwords
- C. Regularly decreasing permissions and access rights
- D. Sharing credentials among team members for convenience

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 8

The use of Cisco Secure Analytics and Logging is essential for:

- A. Limiting organizational visibility into threats
- B. Reducing the effectiveness of incident response
- C. Increasing the complexity of compliance reporting
- D. Combining log management with security analytics for enhanced threat detection

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 9

_____ policies are crucial for restricting access to network resources based on the security health of a device.

- A. Password
- B. Encryption
- C. Network segmentation
- D. Endpoint posture

Answer: (SHOW ANSWER)

NEW QUESTION: 10

The main benefit of Cisco Secure Network Analytics in diagnosing access issues is its ability to:

- A. Focus solely on past security incidents without real-time analysis
- B. Limit data collection to avoid privacy concerns
- C. Encourage a reactive rather than proactive security posture
- D. Provide deep visibility into network traffic for anomaly detection and troubleshooting

Answer: D (LEAVE A REPLY)

NEW QUESTION: 11

The SAFE architectural framework's Key structure is beneficial for:

- A. Providing a holistic view of network security based on specific areas and domains
- B. Limiting the security focus to user authentication
- C. Designing network topologies
- D. Only specifying the types of security devices to be used

Answer: A (LEAVE A REPLY)

NEW QUESTION: 12

Network protocol blocking, such as FTP and BitTorrent, is crucial for:

- A. Simplifying network configuration
- B. Enhancing the performance of cloud applications
- C. Preventing data exfiltration and limiting malware spread
- D. Allowing unrestricted data transfer

Answer: C (LEAVE A REPLY)

NEW QUESTION: 13

Advanced app control mechanisms are essential for SaaS applications because they:

- A. Reduce the overall security posture by focusing only on user experience
- B. Simplify compliance with data protection regulations
- C. Allow all user actions without logging
- D. Enable granular control over app functionality and user actions

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 14

Cisco Umbrella provides visibility and assurance by:

- A. Offering DNS-layer security to prevent access to malicious domains
- B. Limiting its functionality to on-premises solutions
- C. Focusing exclusively on email security
- D. Reducing the scope of security monitoring to non-web traffic

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 15

Telemetry reports are essential for:

- A. Identifying suspicious activities and potential threats within a network
- B. Decreasing network performance
- C. Manual analysis of all network data
- D. Ignoring minor security incidents

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 16

For enforcing application policy at the network security edge, which of the following are critical?

- A. Integrating endpoint security for comprehensive network protection
- B. Enforcing uniform policies without considering individual application requirements
- C. Implementing dynamic security policies based on application behavior and user context
- D. Ignoring encrypted traffic as it is considered secure

Answer: A,C ([LEAVE A REPLY](#))

Valid 300-740 Dumps shared by Actual4test.com for Helping Passing 300-740 Exam! Actual4test.com now offer the **newest 300-740 exam dumps**, the Actual4test.com 300-740 exam **questions have been updated** and **answers have been corrected** get the **newest** Actual4test.com 300-740 dumps with Test Engine here:

NEW QUESTION: 17

Implementing _____ via identity certificates is a secure method to verify the identities of users and devices accessing network resources.

- A. endpoint protection
- B. user and device authentication

C. network segmentation

D. data encryption

Answer: B (LEAVE A REPLY)

NEW QUESTION: 18

Multifactor authentication enhances security by requiring:

A. Only a simple password

B. A single security question

C. A username only for identification

D. Multiple verification methods before granting access

Answer: D (LEAVE A REPLY)

NEW QUESTION: 19

Determining security policies for cloud platform security should involve:

A. Focusing solely on perimeter defense mechanisms

B. Assessing the specific features and capabilities of the cloud platform

C. Assuming default configurations are always secure

D. Ignoring the shared responsibility model

Answer: B (LEAVE A REPLY)

NEW QUESTION: 20

When determining security policies for network security edge to enforce application policy, which of the following considerations are important?

A. The ability to inspect encrypted traffic

B. The integration of threat intelligence for real-time decision making

C. The need to implement a simple, one-size-fits-all policy

D. The use of static rules that do not adapt to changing threat landscapes

Answer: A,B (LEAVE A REPLY)

NEW QUESTION: 21

The process of analyzing telemetry reports helps in:

A. Determining the scope and impact of a security threat

B. Ignoring critical security alerts

C. Focusing solely on external threats

D. Reducing the efficiency of security operations

Answer: A (LEAVE A REPLY)

NEW QUESTION: 22

Using Duo for verifying user access to applications and data is effective because it:

A. Provides multifactor authentication to ensure only authorized users gain access

B. Encourages the use of weak passwords

- C. Ignores the principle of least privilege
- D. Decreases the security of user logins

Answer: A (LEAVE A REPLY)

NEW QUESTION: 23

Converged multicloud policy ensures:

- A. Separate policies for each cloud environment
- B. Increased complexity in security management
- C. Consistent security policies across all cloud environments
- D. Decreased reliance on cloud security

Answer: C (LEAVE A REPLY)

NEW QUESTION: 24

Cisco Secure Cloud Analytics helps in:

- A. Complicating compliance reporting
- B. Decreasing visibility into cloud infrastructure
- C. Identifying potential security threats across cloud environments
- D. Solely managing on-premises network traffic

Answer: C (LEAVE A REPLY)

NEW QUESTION: 25

Advanced app control policies are implemented to:

- A. Increase the speed of cloud applications
- B. Allow all applications equally without any restrictions
- C. Distinguish between and control individual application actions
- D. Limit the bandwidth usage of applications

Answer: C (LEAVE A REPLY)

NEW QUESTION: 26

In the event of a security breach, it's crucial to _____ the incident to the relevant stakeholders and authorities.

- A. delete
- B. ignore
- C. fabricate
- D. report

Answer: D (LEAVE A REPLY)

NEW QUESTION: 27

The main advantage of implementing user and device authentication via identity certificates is:

- A. The reduction in the need for physical security controls

- B. The provision of a secure method to verify identities
- C. The increase in the speed of network connections
- D. The elimination of passwords for all users

Answer: B (LEAVE A REPLY)

NEW QUESTION: 28

The SAFE architectural framework is designed to:

- A. Address only cloud security concerns
- B. Provide guidelines for comprehensive security across different network environments
- C. Focus solely on physical security measures
- D. Only secure on-premises environments

Answer: B (LEAVE A REPLY)

NEW QUESTION: 29

Which of the following is true about multifactor authentication for devices?

- A. It can include something you know, something you have, and something you are
- B. It decreases security by simplifying access
- C. It makes devices easier to hack
- D. It only applies to mobile devices

Answer: A (LEAVE A REPLY)

NEW QUESTION: 30

Endpoint posture policies are used to assess:

- A. The user's personal preferences for software
- B. The security readiness of a device before granting network access
- C. The speed of the network connection
- D. The user's physical location

Answer: B (LEAVE A REPLY)

NEW QUESTION: 31

Mitigation strategies for cloud security attacks include:

- A. Ignoring security alerts
- B. Implementing strict identity and access management controls
- C. Limiting data encryption
- D. Reducing the use of cloud services

Answer: B (LEAVE A REPLY)

300-740 exam **questions have been updated** and **answers have been corrected** get the **newest** Actual4test.com 300-740 dumps with Test Engine here:

NEW QUESTION: 32

The benefits of utilizing visibility and logging tools such as SIEM include:

- A. Improved incident detection and response times
- B. Centralized logging and analysis of security data
- C. Increased manual workload for security teams
- D. Decreased need for encryption

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 33

Automated response actions based on telemetry reports can include:

- A. Blocking IP addresses associated with malicious activity
- B. Decreasing the sensitivity of intrusion detection systems
- C. Removing all forms of access control
- D. Unconditionally trusting all internal network traffic

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 34

The purpose of reporting a cybersecurity incident includes:

- A. Decreasing transparency within the organization
- B. Sharing sensitive details with the public
- C. Ensuring that all stakeholders are informed and necessary legal requirements are met
- D. Causing unnecessary panic

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 35

Cisco Secure Network Analytics is beneficial for:

- A. Providing detailed visibility into network traffic patterns for baseline and compliance analysis
- B. Ignoring encrypted traffic
- C. Reducing the amount of stored network logs
- D. Detecting unusual network traffic that could indicate a security threat

Answer: A,D ([LEAVE A REPLY](#))

NEW QUESTION: 36

Zero-trust network access is based on the principle of:

- A. Using traditional perimeter-based security models

- B. Never verifying user or device identity
- C. Trusting no one and verifying everything
- D. Trusting all devices inside the network

Answer: C (LEAVE A REPLY)

NEW QUESTION: 37

Cisco Secure Cloud Analytics specializes in:

- A. Detecting threats in cloud and hybrid environments by analyzing traffic patterns
- B. Reducing the amount of actionable security intelligence
- C. Encouraging a siloed approach to cloud security
- D. Only managing physical network devices

Answer: A (LEAVE A REPLY)

NEW QUESTION: 38

In the context of network protocol blocking, which of the following statements is true?

- A. Protocol blocking is an outdated practice that reduces network efficiency
- B. All network protocols should be allowed to ensure maximum compatibility
- C. Blocking protocols like BitTorrent can limit the spread of malware
- D. Blocking protocols like FTP can prevent unauthorized data transfers

Answer: C,D (LEAVE A REPLY)

NEW QUESTION: 39

When determining security policies for application enforcement, which of the following is a key consideration?

- A. The popularity of the application among users
- B. The sensitivity of the data being accessed or stored by the application
- C. The programming language used to develop the application
- D. The color scheme of the application interface

Answer: B (LEAVE A REPLY)

NEW QUESTION: 40

The term Security Services Edge (SSE) refers to:

- A. Physical security measures at the perimeter of a network
- B. A decrease in security measures for edge devices
- C. An outdated security model no longer used in modern networks
- D. A comprehensive security solution that combines multiple functions like SWG, CASB, and ZTNA

Answer: D (LEAVE A REPLY)

NEW QUESTION: 41

Which component of the Cisco Security Reference Architecture focuses on identifying and analyzing threats?

- A. Threat intelligence
- B. User/device security
- C. Security operations toolset
- D. Network security

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 42

What does the term "workload" refer to in the context of cloud security?

- A. The amount of data processed by the cloud
- B. Applications and processes running in cloud environments
- C. The user's responsibility in managing cloud security
- D. The physical servers in a data center

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 43

Security audit reports are used to:

- A. Justify the removal of all security measures
- B. Determine the effectiveness of existing security policies and identify areas for improvement
- C. Increase the complexity of security infrastructure
- D. Decrease organizational transparency

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 44

In the context of cloud security, NIST framework primarily provides:

- A. Network performance metrics
- B. Data encryption algorithms
- C. Standards and guidelines for cybersecurity practices
- D. Physical security guidelines

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 45

Benefits of using visibility and logging tools like SIEM include:

- A. Centralized view of security data across the network
- B. Decreased data storage needs
- C. Enhanced detection of advanced threats
- D. Increased complexity in security management

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 46

Which industry security frameworks are mentioned as part of cloud security architecture?

- A. IEEE
- B. NIST
- C. CISA
- D. DISA

Answer: B,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 47

Which of the following is a use case for visibility and assurance automation?

- A. Automating the response to security incidents
- B. Decreasing the speed of security operations
- C. Reducing the accuracy of threat detection
- D. Increasing manual intervention in security processes

Answer: A ([LEAVE A REPLY](#))
