NEW QUESTION: 1

In a use case, which is one of the two commonly used relationships?

- A. Inherit
- B. Identify
- C. Distribute
- D. Extend

Answer: D (LEAVE A REPLY)

There are two commonly used relationships between use cases:

Extend: allows for the insertion of additional behavior into a use case. The use case that is being extended must be completely functional in its own right and must not depend on the extending use case for its successful execution. This relationship may be used to show that an alternate flow has been added to an existing use case (representing new requirements).

Include: allows for the use case to make use of functionality present in another use case. The included use case does not need to be a complete use case in its own right if it is not directly triggered by an actor. This relationship is most often used either when some shared functionality is required by several use cases or to abstract out a complex piece of logic.

NEW QUESTION: 2

If a business analyst (BA) asks questions during the job shadowing with a subject matter expert, which approach is being used?

- A. Contextual Inquiry Observation
- B. Active Observation Approach
- C. Passive Observation Approach
- D. Inactive Observation Approach

Answer: B (LEAVE A REPLY)

NEW QUESTION: 3

Which technique would the business analyst (BA) consider to show the transformation of data?

- A. Sequence diagram
- B. Data flow diagram
- C. Data modelling
- D. Flowchart

Answer: B (LEAVE A REPLY)

A data flow diagram illustrates the movement and transformation of data between externals (entities) and processes. The output from one external or process is the input to another. The data flow diagram also illustrates the temporary or permanent repositories (referred to as data stores or terminators) where data is stored within a system or an organization. The data defined should be described in a data dictionary.

NEW QUESTION: 4

Inputs to prepare for elicitation include:

- A. information management approach and solution scope.
- B. needs and stakeholder engagement approach.
- C. future state description and risk analysis results.
- D. requirements and designs.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 11

When planning business analysis information management, what are the factors that influence storage and access decisions?

- A. Organizational values and procurement strategy
- B. Business rules and change strategy
- C. Business policies and methodology adopted

D. Organizational standards and tool availability

Answer: ([SHOW ANSWER](#))

Business analysis information can be stored in many ways. Storage decisions depend on many factors such as who must access the information, how often they need to access it, and what conditions must be present for access. Organizational standards and tool availability also influence storage and access decisions. The business analysis approach defines how various tools will be used on the initiative and how the information will be captured and stored within those tools. Tools may shape the selection of business analysis techniques, notations to be used, and the way that information is organized.
