Microsoft.MS-100.v2023-03-17.q167

Exam Code:	MS-100
Exam Name:	Microsoft 365 Identity and Services
Certification Provider:	Microsoft
Free Question Number:	167
Version:	v2023-03-17
# of views:	2710
# of Questions views:	1670
https://www.freepdfdumps.com/Microsoft.MS-100.v2023-03-17.q167.html	

NEW QUESTION: 1
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has 3,000 users. All the users are assigned Microsoft 365 E3 licenses.
Some users are assigned licenses for all Microsoft 365 services. Other users are assigned licenses for only certain Microsoft 365 services.
You need to determine whether a user named User1 is licensed for Exchange Online only.
Solution: You launch the Azure portal, and then review the Licenses blade.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
In the Licenses blade, click All Products then select the E3 License. This will display a list of all users assigned an E3 license. Select User1. You'll see how many services are assigned in the Enabled Services column. Click on the number in the Enabled Services column for User1 and you'll be taken to the licenses page for that user. Click on the number in the Enabled Services column for User1 again and a page will open which shows you exactly which services are enabled or disabled.
Alternatively, you can go into the user account properties directly then select Licenses. This will display the licenses blade for that user. You can then click on the number in the Enabled Services column for the user and a page will open which shows you exactly which services are enabled or disabled.

NEW QUESTION: 2
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Microsoft 365 subscription.
You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.
Solution: From the Device Management admin center, you a trusted location and compliance policy.
Does this meet the goal?
A. Yes

B. No

Answer: B (LEAVE A REPLY)

Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access.

Reference:

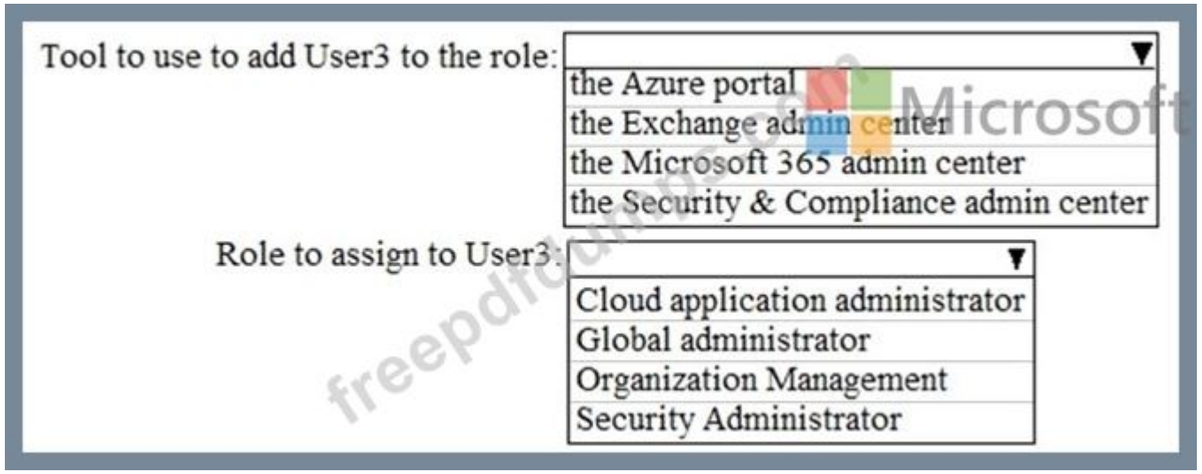
https://techcommunity.microsoft.com/t5/Microsoft-SharePoint-Blog/Conditional-Access-in-SharePoint-Onlineand-OneDrive-for/ba-p/46678

NEW QUESTION: 3

You need to meet the security requirements for User3. The solution must meet the technical requirements.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:

Reference:

https://docs.microsoft.com/en-us/office365/SecurityCompliance/eop/feature-permissions-in-eop

NEW QUESTION: 4

You have a Microsoft 365 subscription and a hybrid Microsoft Exchange Online deployment.

You plan to deploy iOS devices that will use Outlook for iOS and Hybrid Modem Authentication (HMA).

You need to ensure that HMA is configured correctly.

What should you use?

A. Microsoft Support and Recovery Assistant
B. Apple Configurator
C. Microsoft Diagnostics and Recovery Toolset (DaRT)
D. Microsoft Remote Connectivity Analyzer
Answer: (SHOW ANSWER)

NEW QUESTION: 5
Your company uses on-premises Windows Server File Classification Infrastructure 9FCI). Some documents on the on-premises file servers are classifies as Confidential.
You migrate the files from the on-premises file servers to Microsoft SharePoint Online.
You need to ensure that you can implement data loss prevention (DLP) policies for the uploaded files based on the Confidential classification.
What should you do first?
A. From the SharePoint admin center, create a managed property.
B. From the SharePoint admin center, configure hybrid search.
C. From the Security & Compliance Center PowerShell, run the
New-DlpComplianceRule cmdlet.
D. From the Security & Compliance Center PowerShell, run the
New-DataClassification cmdlet.
Answer: A (LEAVE A REPLY)
Your organization might use Windows Server FCI to identify documents with personally identifiable information (PII) such as social security numbers, and then classify the document by setting the Personally Identifiable Information property to High, Moderate, Low, Public, or Not PII based on the type and number of occurrences of PII found in the document. In Office 365, you can create a DLP policy that identifies documents that have that property set to specific values, such as High and Medium, and then takes an action such as blocking access to those files.
Before you can use a Windows Server FCI property or other property in a DLP policy, you need to create a managed property in the SharePoint admin center.
Reference:
https://docs.microsoft.com/en-us/microsoft-365/compliance/protect-documents-that-have-fci-or-other-properties

NEW QUESTION: 6
You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.

Name	Member of	Multi-Factor Auth Status
User1	Group1	Disabled
User2	Group1	Required

Multi-factor authentication (MFA) is configured to use 131.107.50/24 for trusted IPs.
The tenant contains the named locations shown in the following table.

Name	IP address range	Trusted location
Location 1	131.107.20.0/24	Yes
Location 2	131.107.50.0/24	Yes

You create a conditional access policy that has the following configurations:
Users and groups assignment: All users
Cloud apps assignment: App1
Conditions: Include all trusted locations

Grant access: require multi-factor authentication

For each of the following statements, select Yes if the statement is true. otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
When User1 connects to App1 from a device that has an IP address of 131.107.50.10, User1 must use MFA.	○	○
When User2 connects to App1 from a device that has an IP address of 131.107.50.15, User2 must use MFA.	○	○
When User2 connects to App1 from a device that has an IP address of 131.107.5.5, User2 must use MFA.	○	○

Answer:

Statements	Yes	No
When User1 connects to App1 from a device that has an IP address of 131.107.50.10, User1 must use MFA.	○	○
When User2 connects to App1 from a device that has an IP address of 131.107.50.15, User2 must use MFA.	○	○
When User2 connects to App1 from a device that has an IP address of 131.107.5.5, User2 must use MFA.	○	○

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition

NEW QUESTION: 7

Your network contains an Active Directory forest named local.

You have a Microsoft 365 subscription. You plan to implement a directory synchronization solution that will use password hash synchronization.

From the Microsoft 365 admin center, you verify the contoso.com domain name. You need to prepare the environment foe the planned directory synchronization solution.

What should you do first?

A. From the public DNS zone of contoso.com, add a new mail exchanger (MX) record.

B. From Active Directory Domains and Trusts, add contoso.com as a UPN suffix

C. From the Microsoft 365 admin center, verify the contoso.com domain name.

D. From Active Directory Users and Computers, modify the UPN suffix for all users.

Answer: B (LEAVE A REPLY)

The on-premise Active Directory domain is named contoso.local. Therefore, all the domain users accounts will have a UPN suffix of contoso.local by default.

To enable directory synchronization that will use password hash synchronization, you need to configure the domain user accounts to have the same UPN suffix as the verified domain (contoso.com in this case). Before you can change the UPN suffix of the domain user accounts to contoso.com, you need to add contoso.com as a UPN suffix in the domain.

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/hybrid/plan-connect-userprincipalname

NEW QUESTION: 8
Your company has 10 offices.
The network contains an Active Directory domain named contoso.com. The domain contains 500 client computers. Each office is configured as a separate subnet.
You discover that one of the offices has the following:
Computers that have several preinstalled applications
Computers that use nonstandard computer names
Computers that have Windows 10 preinstalled
Computers that are in a workgroup
You must configure the computers to meet the following corporate requirements:
All the computers must be joined to the domain.
All the computers must have computer names that use a prefix of CONTOSO.
All the computers must only have approved corporate applications installed.
You need to recommend a solution to redeploy the computers. The solution must minimize the deployment time.
A. a provisioning package
B. wipe and load refresh
C. Windows Autopilot
D. an in-place upgrade
Answer: A (LEAVE A REPLY)
By using a Provisioning, IT administrators can create a self-contained package that contains all of the configuration, settings, and apps that need to be applied to a device.
Incorrect Answers:
C: With Windows Autopilot the user can set up pre-configure devices without the need consult their IT administrator.
D: Use the In-Place Upgrade option when you want to keep all (or at least most) existing applications.
Reference:
https://docs.microsoft.com/en-us/windows/deployment/windows-10-deployment-scenarios
https://docs.microsoft.com/en-us/windows/deployment/windows-autopilot/windows-autopilot

NEW QUESTION: 9
You have a Microsoft 365 subscription.
You add a domain named contoso.com.
When you attempt to verify the domain, you are prompted to send a verification email to admin@contoso.com.
D18912E1457D5D1DDCBD40AB3BF70D5D
You need to change the email address used to verify the domain.
What should you do?
A. From the domain registrar, modify the contact information of the domain
B. Add a TXT record to the DNS zone of the domain
C. Modify the NS records for the domain
D. From the Microsoft 365 admin center, change the global administrator of the Microsoft 365 subscription
Answer: (SHOW ANSWER)
The email address that is used to verify that you own the domain is the email address listed with the domain registrar for the registered contact for the domain.
Reference:

https://docs.microsoft.com/en-us/microsoft-365/admin/setup/add-domain?view=o365-worldwide

NEW QUESTION: 10
Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains a user named User1.
You suspect that an imposter is signing in to Azure AD by using the credentials of User1.
You need to ensure that an administrator named Admin1 can view all the sign in details of User1 from the past
24 hours.
To which three roles should you add Admin1? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.
A. Security administrator
B. Password administrator
C. User administrator
D. Compliance administrator
E. Reports reader
F. Security reader
Answer: A,E,F (LEAVE A REPLY)
Users in the Security Administrator, Security Reader, Global Reader, and Report Reader roles can view the sign in details.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-sign-ins

NEW QUESTION: 11
You have a single-page application (SPA) named TodoListSPA and a server-based web app named TodoUstServKe.
The permissions for the TodoListSPA API are configured as shown in the TodoUstSPA exhibit (Click the TodoUstSPA tab) The permissions for the TodoUstService API are configured as shown m the TodoListService exhibit (Click the TodoUstService tab.) You need to ensure that TodoUstService can access a Microsoft OneDnve file of the signed-in user. The solution must use the principle of least privilege.
Which permission request should you configure?
A. the sites.Read.All delegated permission for TodoUstService
B. the sites.Read.All application permission for TodoUstSPA
C. the sites.Read.All application permission for TodoUstService
D. thesites.Read.All delegated permission for TodoListSPA
Answer: A (LEAVE A REPLY)

NEW QUESTION: 12
Your network contains an Active Directory domain and a Microsoft Azure Active Directory (Azure AD) tenant.
The network uses a firewall that contains a list of allowed outbound domains.
You began to implement directory synchronization.
You discover that the firewall configuration contains only the following domain names in the list of allowed domains:
* *.microsof.com
* *.office.com
Directory synchronization fails.
You need to ensure that directory synchronization completes successfully.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.
A. From the firewall, allow the IP address range of the Azure data center for outbound communication.
B. From Azure AD Connect, mo dify the Customize synchronization options task
C. Deploy an Azure AD Connect sync server in staging mode.
D. From the firewall, create a list of allowed inbound domains.
E. From the firewall, modify the list of allowed outbound domains.
Answer: (SHOW ANSWER)
Azure AD Connect needs to be able to connect to various Microsoft domains such as login.microsoftonline.com. Therefore, you need to modify the list of allowed outbound domains on the firewall.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/reference-connect-ports

NEW QUESTION: 13
You have an on-premises Microsoft Exchange Server organization that contains 500 mailboxes and a third-party email archive solution.
You have a Microsoft 365 tenant that contains a user named User1.
You plan to use the User1 account to perform a PST import of the archive mailboxes to the tenant.
Which two roles does User1 require to perform the import? The solution must use the principle of least privilege. Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.
A. Mail Recipients
B. Exchange admin
C. Records Management
D. Mailbox Import Export
E. eDiscovery Manager
Answer: A,D (LEAVE A REPLY)
Reference:
https://docs.microsoft.com/en-us/microsoft-365/compliance/importing-pst-files-to-office-365?view=o365-worldwide

NEW QUESTION: 14
You have a hybrid deployment of Microsoft 365 that contains the users shown in the following table.

Name	Azure Active Directory (Azure AD) role	On-premises Active Directory group membership
User1	Cloud application administrator	*None*
User2	Application administrator	*None*
User3	Service administrator	*None*
User4	*None*	Domain Admins

You plan to provide access to an on-premises app named App1 by using Azure AD Application Proxy. App1 will be managed by User4.
You need to identify which user can install the Application Proxy connector.
Which user should you identify?
A. User1
B. User2
C. User3

D. User4
Answer: (SHOW ANSWER)
https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-add-on-premisesapplication

NEW QUESTION: 15
Your company has 10,000 users who access all applications from an on-premises data center.
You plan to create a Microsoft 365 subscription and to migrate data to the cloud.
You plan to implement directory synchronization.
User account and group accounts must sync to Microsoft Azure Directory (Azure AD) successfully.
You discover that several user accounts fail to sync to Azure AD.
You need to identify which user accounts failed to sync. You must resolve the issue as quickly as possible.
What should you do?
A. From Active Directory Administrative Center, search for all the users, and then modify the properties of the user accounts.
B. Run idfix.exe, and then click Complete.
C. From Windows PowerShell, run the Start-AdSyncSyncCycle -PolicyType Delta command.
D. Run idfix.exe, and then click Edit.
Answer: (SHOW ANSWER)
IdFix is used to perform discovery and remediation of identity objects and their attributes in an on-premises Active Directory environment in preparation for migration to Azure Active Directory. IdFix is intended for the Active Directory administrators responsible for directory synchronization with Azure Active Directory.
Reference:
https://docs.microsoft.com/en-us/office365/enterprise/prepare-directory-attributes-for-synch-with-idfix
https://www.microsoft.com/en-gb/download/details.aspx?id=36832

NEW QUESTION: 16
Your company has 20 employees, Each employees has a mailbox hosted in Outlook.com.
The company purchases a Microsoft 365 subcription.
You plan to migrate all the mailboxes to Microsoft 365.
You need to recommend which type of migration to use for the mailboxes.
What should recommend?
A. Cutover migration
B. Staged migration
C. IMAP migration
D. Minimal hybrid migration
Answer: C (LEAVE A REPLY)
To migrate mailboxes from Outlook.com to Office 365, you need to use the IMAP migration method.
After you've added your users to Office 365, you can use Internet Message Access Protocol (IMAP) to migrate email for those users from their IMAP-enabled email servers.
In the Microsoft 365 admin center, go to Setup > Data migration to start migrating IMAP enabled emails. The email migrations page is pre-configured for migrations from Gmail, Outlook, Hotmail and Yahoo. You can also enter your own IMAP server name and connection parameters to migrate from an email service that is not listed.
Reference:
https://docs.microsoft.com/en-us/exchange/mailbox-migration/migrating-imap-mailboxes/imap-migration-in-the-admin-center

NEW QUESTION: 17
Which migration solution should you recommend for Project1?
A. From the Exchange admin center, start a migration and select Staged migration.
B. From the Microsoft 365 admin center, start a data migration and click Exchange as the data service.
C. From the Microsoft 365 admin center, start a data migration and click Outlook as the data service.
D. From the Exchange admin center, start a migration and select Cutover migration.
Answer: (SHOW ANSWER)
Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.
Fabrikam does NOT plan to implement identity federation.
All users must be able to exchange email messages successfully during Project1 by using their current email address.
During Project1, some users will have mailboxes in Microsoft 365 and some users will have mailboxes in Exchange on-premises. To enable users to be able to exchange email messages successfully during Project1 by using their current email address, we'll need to configure hybrid Exchange.
A new way to migrate mailboxes in a hybrid Exchange configuration is to use the Microsoft 365 data migration service. The data migration service can migrate Exchange, SharePoint and OneDrive. Therefore, we need to start a data migration and click Exchange as the service to be migrated.
Reference:
https://docs.microsoft.com/en-us/fasttrack/O365-data-migration
https://docs.microsoft.com/en-us/exchange/hybrid-deployment/move-mailboxes This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.
Overview

NEW QUESTION: 18
Your network contains two Active Directory forests. Each forest contains two domains. All client computers run Windows 10 and are domain-joined.
You plan to configure Hybrid Azure AD join for the computers.
You create Microsoft Azure Active Directory (Azure AD) tenant.
You need to ensure that the computers can discover the Azure AD tenant.
What should you create?

A. a new computer account for each computer
B. a new service connection point (SCP) for each domain
C. a new trust relationship for each forest
D. a new service connection point (SCP) for each forest
Answer: D (LEAVE A REPLY)
Your devices use a service connection point (SCP) object during the registration to discover Azure AD tenant information. In your on-premises Active Directory instance, the SCP object for the hybrid Azure AD joined devices must exist in the configuration naming context partition of the computer's forest. There is only one configuration naming context per forest. In a multi-forest Active Directory configuration, the service connection point must exist in all forests that contain domain-joined computers.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/devices/hybrid-azuread-join-manual

NEW QUESTION: 19
You have a web app that uses the Microsoft identity Platform.
You extend the application manifest to implement the following role-based access control (RBAC).

```
"appId": "8763f1c4-f988-489c-a51e-158e9ef97d6a",
"appRoles": [
    {
      "allowedMemberTypes": [
        "User"
      ],
      "displayName": "Read user access",
      "id": "9e46db32-d022-4e98-84cc-520a55ff9ba0",
      "isEnabled": true,
      "description": "Readers have the ability to read tasks.",
      "value": "Readers"
    },
    {
      "allowedMemberTypes": [
        "User"
      ],
      "displayName": "Write user access",
      "id": "9e46db32-d022-4e98-84cc-520a55ff9ba0",
      "isEnabled": false,
      "description": "Writers have the ability to write tasks."
      "value": "Writers"
    }
  ],
"availableToOtherTenants": false,
```

When you attempt to save the manifest you receive a validation error. Which key value pair should you modify to resolve the error?
A. appId
B. isEnabled
C. allowedMamberType
D. id
Answer: B (LEAVE A REPLY)

NEW QUESTION: 20

Which migration solution should you recommend for Project1?

A. From Exchange Online PowerShell, run the New-MaiboxImportRequest cmdlet.

B. From Exchange Online PowerShell, run the New-MaiboxExportRequest cmdlet.

C. From the Microsoft 365 admin center, start a data migration and click Upload PSST as the data service.

D. From the Exchange admin center, start a migration and select Remote move migration

Answer: (SHOW ANSWER)

During Project1, some users will have mailboxes in Microsoft 365 and some users will have mailboxes in Exchange on-premises. To enable users be able to exchange email messages successfully during Project1 by using their current email address, we'll need to configure hybrid Exchange.

To migrate mailboxes in a hybrid Exchange configuration, you use Exchange admin center perform Remote move migrations.

Reference:

https://docs.microsoft.com/en-us/exchange/hybrid-deployment/move-mailboxes

NEW QUESTION: 21

You have a hybrid deployment of Microsoft 365 and an Azure Active Directory (Azure AD) tenant. The tenant contains the users shown in the following table.

Name	Type	Source
User1	Member	Azure AD
User2	Member	Windows Server Active Directory
User3	Guest	Microsoft account

Password protection in Azure AD is configured as shown in the following exhibit.

Which users will be prevented from using the word "Contoso" as part of their password?

A. User1 only

B. User1 and User2 only

C. User1 and User3 only

D. User1, User2, and User3

Answer: D (LEAVE A REPLY)

Reference:

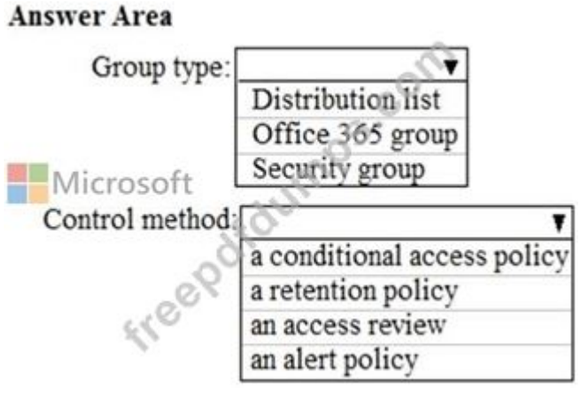
https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad

NEW QUESTION: 22

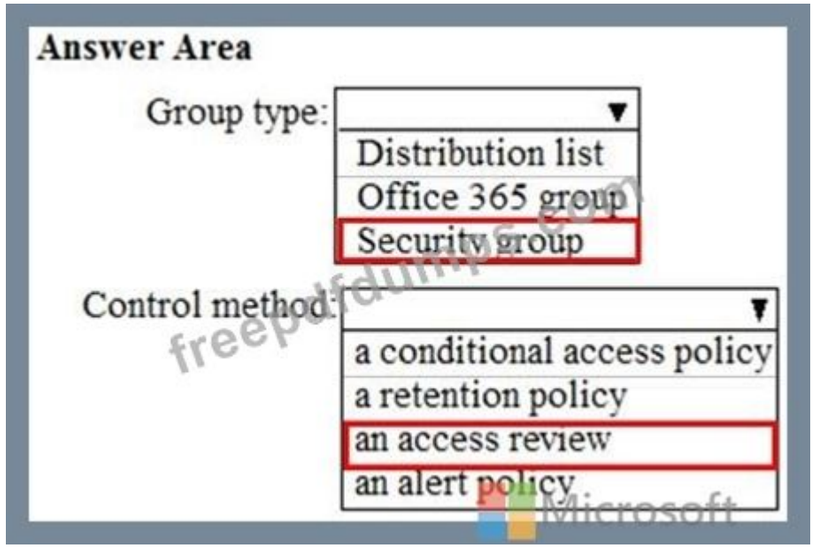
You need to create the UserLicenses group. The solution must meet the security requirements.

Which group type and control method should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:



Reference:

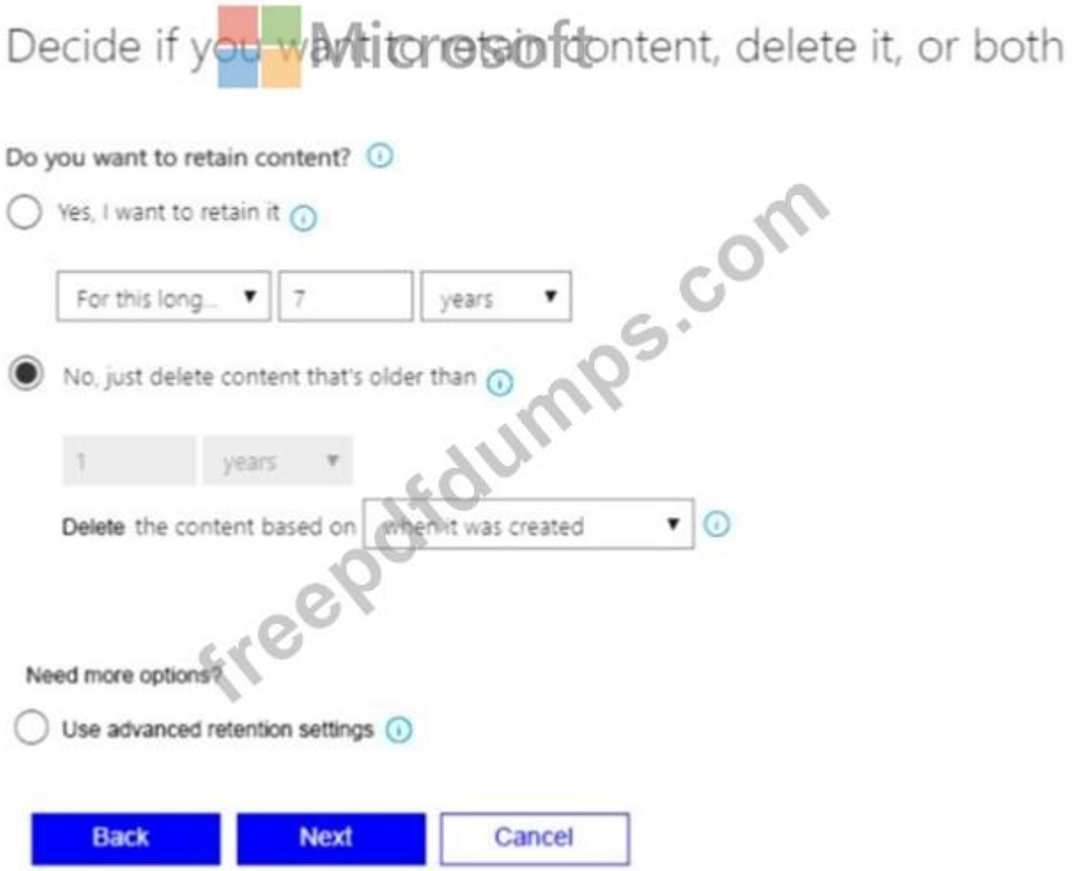
https://docs.microsoft.com/en-us/azure/active-directory/governance/access-reviews-overview

NEW QUESTION: 23

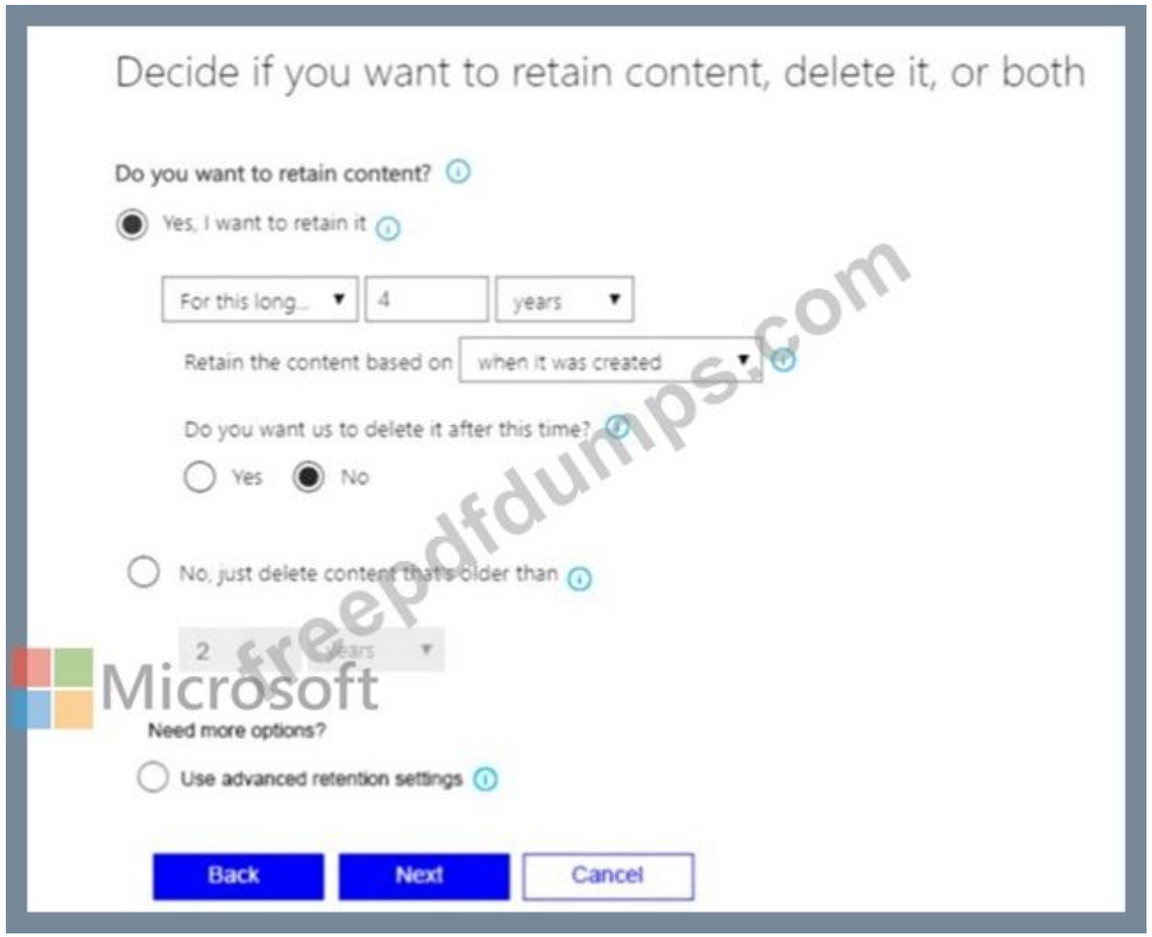
You have retention policies in Microsoft 365 as shown in the following table.

Name	Location
Policy1	OneDrive accounts
Policy2	Exchange email, Exchange public folders, Office 365 groups, OneDrive accounts, SharePoint sites

Policy1 is configured as shown in the Policy1 exhibit. (Click the Policy1 tab.) Policy1



Policy1 is configured as shown in the Policy2 exhibit. (Click the Policy2 tab.) Policy2

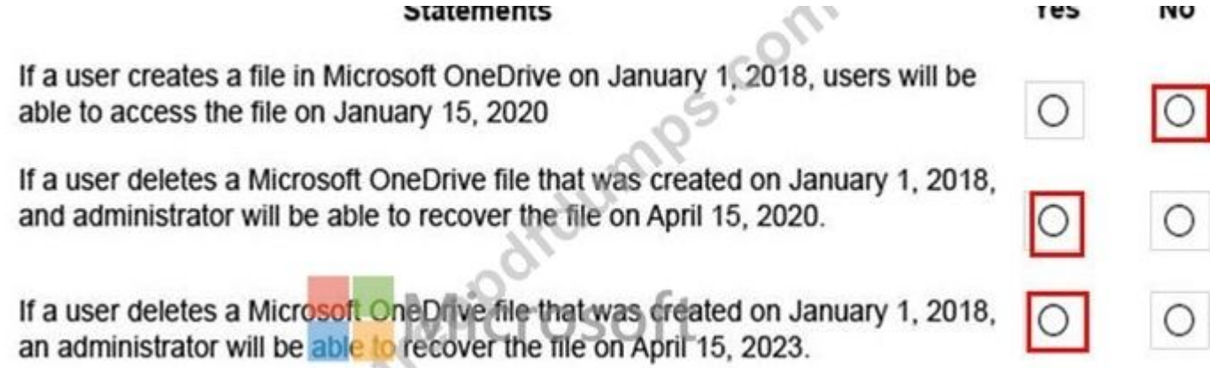


For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
If a user creates a file in Microsoft OneDrive on January 1, 2018, users will be able to access the file on January 15, 2020	○	○
If a user deletes a Microsoft OneDrive file that was created on January 1, 2018, and administrator will be able to recover the file on April 15, 2020.	○	○
If a user deletes a Microsoft OneDrive file that was created on January 1, 2018, an administrator will be able to recover the file on April 15, 2023.	○	○

Answer:



Reference:
https://docs.microsoft.com/en-us/office365/securitycompliance/retention-policies#the-principles-of-retention-or-what-takes-precedence

NEW QUESTION: 24
Your network contains an Active Directory domain. The domain contains a server named Server1 that runs Windows Server 2016. Server1 has a share named Share1.
You have a hybrid deployment of Microsoft 365.
You need to migrate the content in Share1 to Microsoft OneDrive.
What should you use?
A. Windows Server Migration Tools
B. Microsoft SharePoint Migration Tool
C. Storage Migration Service
Answer: B (LEAVE A REPLY)
Reference:
https://docs.microsoft.com/en-us/sharepointmigration/migrating-content-to-onedrive-for-business

NEW QUESTION: 25
Your company has a sales system that emails an alert to all the members of the sales department when a new sale is made.
You need to ensure that a notification is posted to a team channel when a new sale is made. The solution must minimize development effort.
Which two actions should you perform? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.
A. Set the configurationUrl property of a connector in the manifest
B. Get an incoming webhook for the channel
C. Post XML to the webhook URL from the existing sales system.
D. Post JSON to the webhook URL from the existing sales system.
Answer: (SHOW ANSWER)

NEW QUESTION: 26
You have an on-premises call center and a Microsoft 365 E5 tenant.
You plan to implement Microsoft Phone System Direct Routing and Microsoft Teams.
What should you include m the solution?
A. Azure AD Connect
B. a local number port order request

C. a Session Border Controller (SBC)
D. Skype for Business Cloud Connector Edition
Answer: (SHOW ANSWER)

NEW QUESTION: 27
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company plans to deploy several Microsoft Office 365 services.
You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:
* Users must be able to authenticate during business hours only.
* Authentication requests must be processed successfully if a single server fails.
* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO. The solution contains two servers that have an Authentication Agent installed.
A. Yes
B. No
Answer: B (LEAVE A REPLY)

NEW QUESTION: 28
Your on-premises network contains a Microsoft Exchange Server 2019 organization.
You purchase a Microsoft 365 E5 subscription.
You need to integrate the on-premises network and Exchange Online.
What should you do first?
A. install an Azure Active Directory (Azure AD) Application Proxy connector.
B. Add a connector in Exchange Online.
C. Run the Hybrid Configuration wizard
D. implement Azure AD Connect.
Answer: D (LEAVE A REPLY)

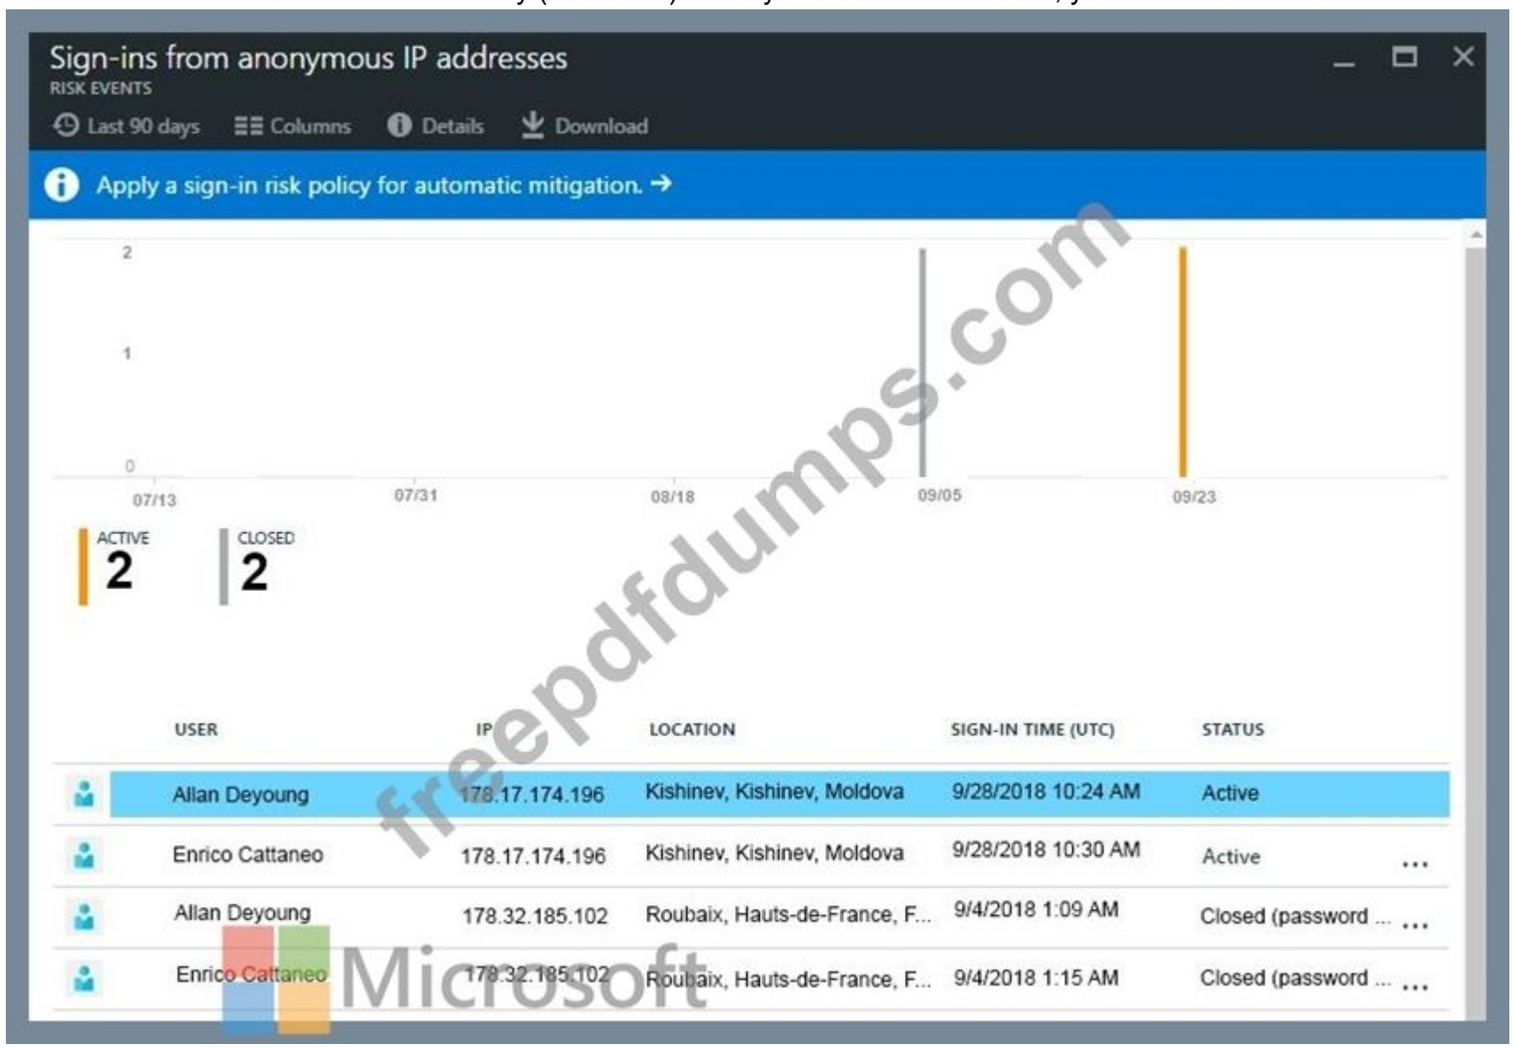
NEW QUESTION: 29
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has a Microsoft Office 365 tenant.
You suspect that several Office 365 features were recently updated.
You need to view a list of the features that were recently updated in the tenant.
Solution: You use Reports from the Microsoft 365 compliance center.
Does this meet the goal?
A. Yes

B. No

Answer: (SHOW ANSWER)

NEW QUESTION: 30

From the Microsoft Azure Active Directory (Azure AD) Identity Protection dashboard, you view the risk events shown in the exhibit. (Click the Exhibit tab.)



You need to reduce the likelihood that the sign-ins are identified as risky.

What should you do?

A. From the Security & Compliance admin center, add the users to the Security Readers role group.

B. From the Conditional access blade in the Azure Active Directory admin center, create named locations.

C. From the Azure Active Directory admin center, configure the trusted IPs for multi-factor authentication.

D. From the Security & Compliance admin center, create a classification label.

Answer: (SHOW ANSWER)

A named location can be configured as a trusted location. Typically, trusted locations are network areas that are controlled by your IT department. In addition to Conditional Access, trusted named locations are also used by Azure Identity Protection and Azure AD security reports to reduce false positives for risky sign-ins.

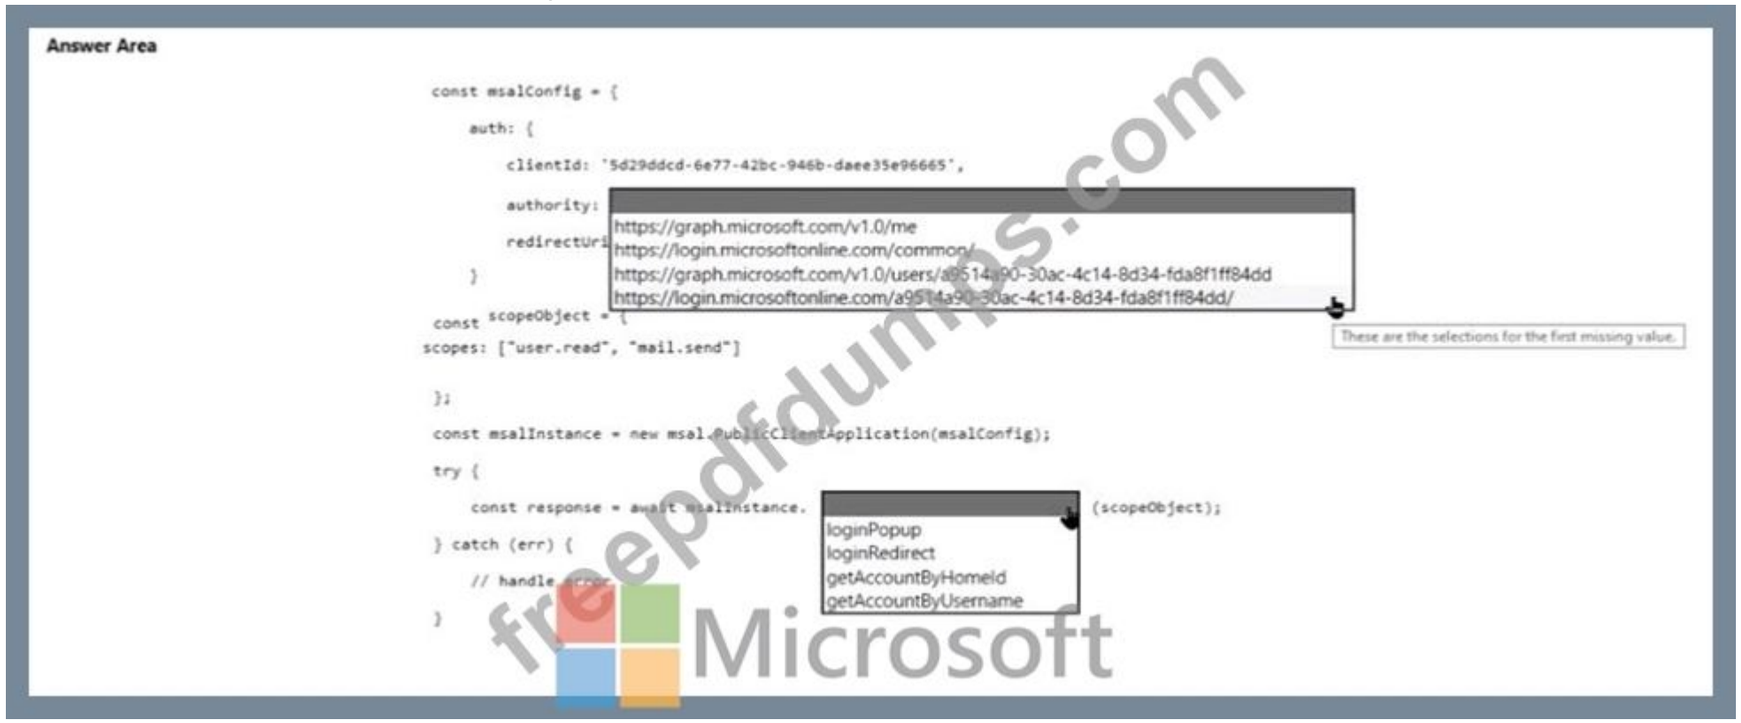
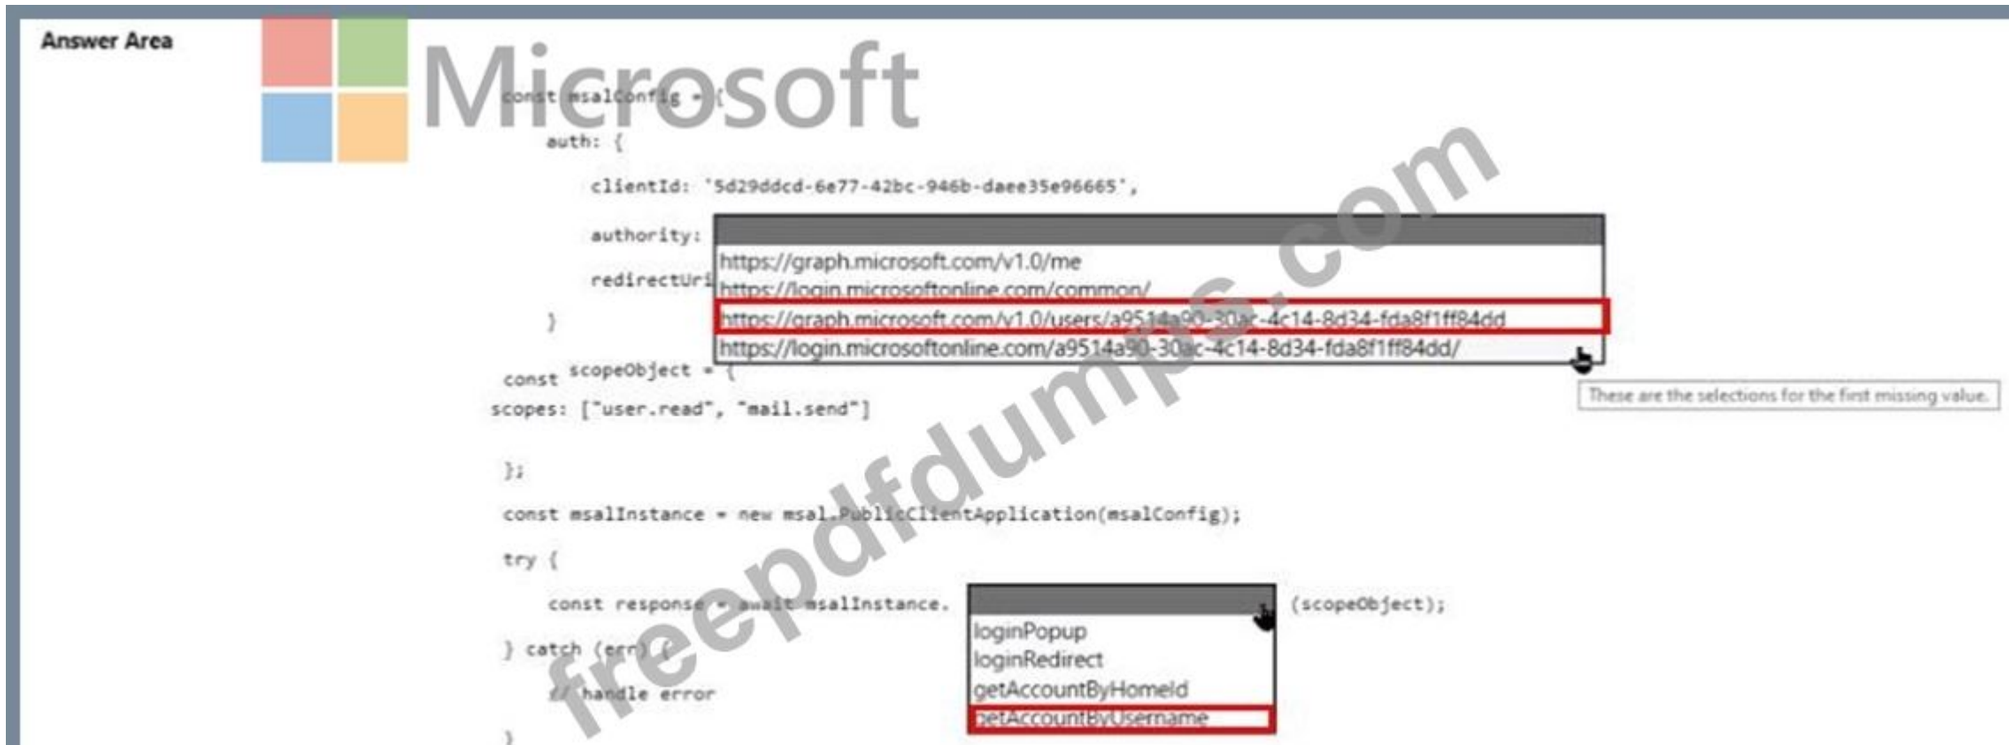
https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition

NEW QUESTION: 31
You have a multitenant app named App1.
You need to ensure that App1 supports token acquisition when a user accesses the app by using a web browser that has a popup blocker extension enabled. How should you complete the Microsoft Authentication Library (MSAL) for JavaScript v2.0 code? To answer, select the appropriate options m the answer are a.
NOTE: Each correct selection is worth one point.



Answer:

Answer Area



NEW QUESTION: 32
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Microsoft 365 subscription.
You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.
Solution: From the Azure Active Directory admin center, you create a trusted location and a conditional access policy.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition

https://techcommunity.microsoft.com/t5/Microsoft-SharePoint-Blog/Conditional-Access-in-SharePoint-Onlineand-OneDrive-for/ba-p/46678

NEW QUESTION: 33
You have an Azure Active Directory (Azure AD) tenant named contoso.com that contains the users shown in the following table.
User1 is the owner of Group1, User2 is the owner of Group2.
You create an access review that contains the following configurations:
* Users to review, Member of a group
* Scope Everyone
* Group: Group1 and Group2
* Review Group owners
For each of the following statements, select Yes if the statement is true. Otherwise select No.
NOTE: Each correct selection is worth one point.

NEW QUESTION: 34
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory forest.
You deploy Microsoft 365.
You plan to implement directory synchronization.
You need to recommend a security solution for the synchronized identities. The solution must meet the following requirements:
* Users must be able to authenticate successfully to Microsoft 365 services if Active Directory becomes unavailable.
* User passwords must be 10 characters or more.
Solution: Implement pass-through authentication and modify the password settings from the Default Domain Policy in Active Directory.
Does this meet the goal?
A. Yes

B. No

Answer: B (LEAVE A REPLY)

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-password-hash-synchronization

Topic 3, Litware inc

General Overview

Litware, Inc. is a consulting company that has a main office in Montreal and a branch office in Seattle.

Litware collaborates with a third-party company named ADatum Corporation.

Environment

On-Premises Environment

The network of Litware contains an Active Directory domain named litware.com. The domain contains three organizational units (OUs) named LitwareAdmins, Montreal Users, and Seattle Users and the users shown in the following table.

Name	OU
Admin1	LitwareAdmins
Admin2	LitwareAdmins
Admin3	LitwareAdmins
Admin4	LitwareAdmins

The domain contains 2,000 Windows 10 Pro devices and 100 servers that run Windows Server 2019.

Cloud environment

Litware has a pilot Microsoft 365 subscription that includes Microsoft Office 365 Enterprise E3 licenses and Azure Active Directory Premium Plan 2 licenses.

The subscription contains a verified DNS domain named litware.com.

Azure AD Connect is installed and has the following configurations:

Password hash synchronization is enabled.

Synchronization is enabled for the LitwareAdmins OU only.

Users are assigned the roles shown in the following table.

Name	Role
Admin1	Global Administrator
Admin2	Helpdesk admin
Admin3	Security admin
Admin4	User Administrator

Self-service password reset (SSPR) is enabled.

The Azure Active Directory (Azure AD) tenant has Security defaults enabled.

Requirements

Planned Changes

Litware identifies the following issues:

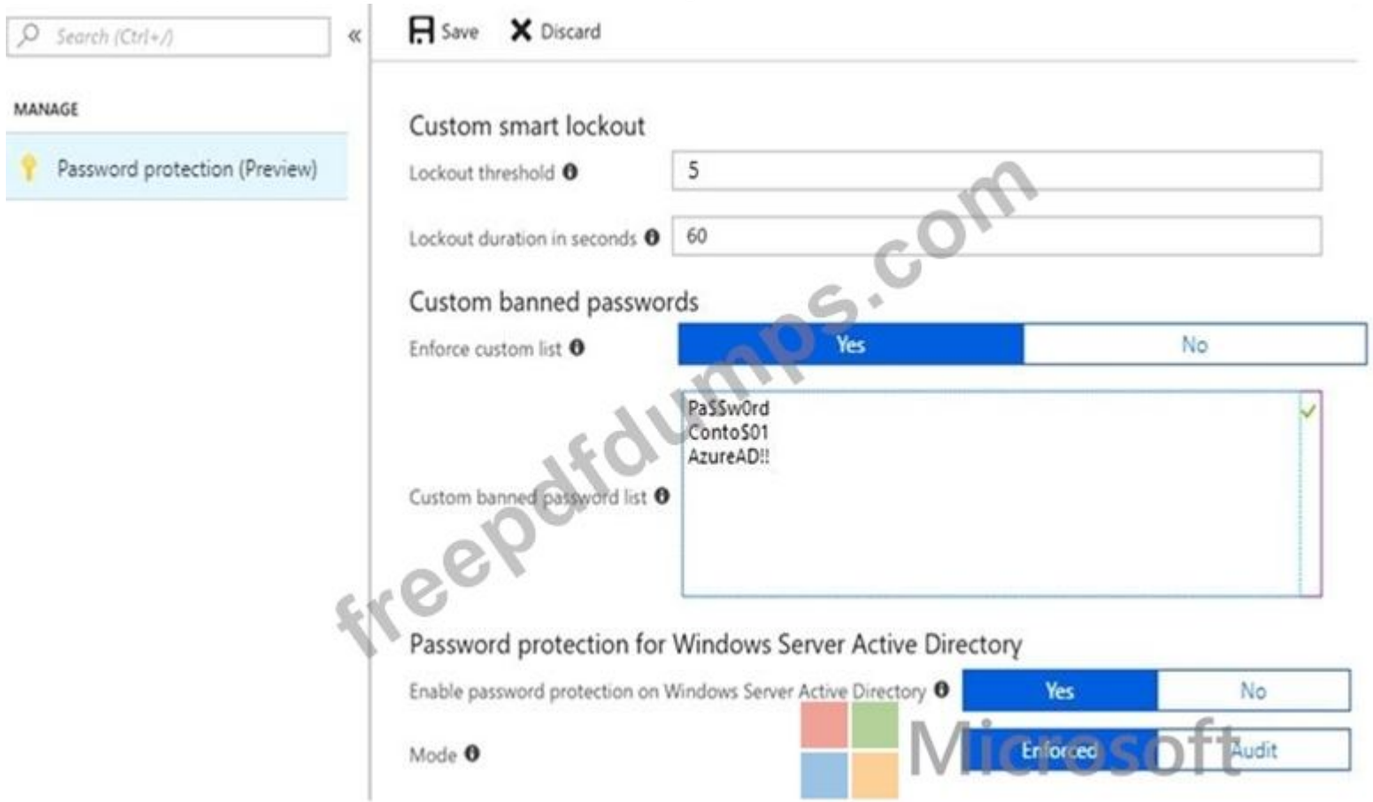
Admin1 cannot create conditional access policies.

Admin4 receives an error when attempting to use SSPR.

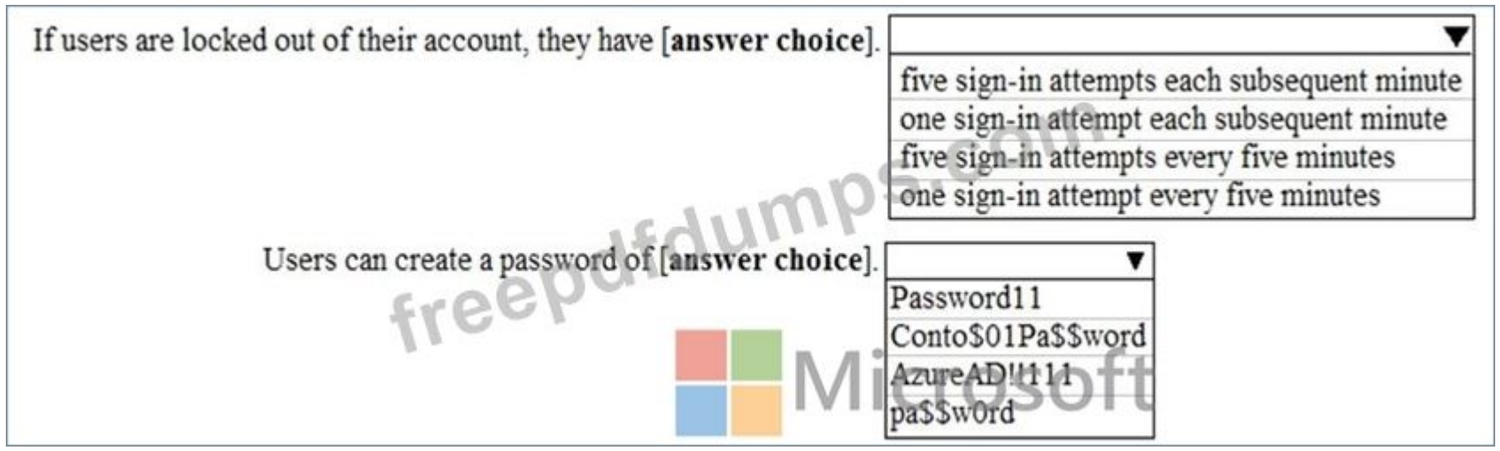
Users access new Office 365 service and feature updates before the updates are reviewed by Admin2.

Technical Requirements
Litware plans to implement the following changes:
Implement Microsoft Intune.
Implement Microsoft Teams.
Implement Microsoft Defender for Office 365.
Ensure that users can install Office 365 apps on their device.
Convert all the Windows 10 Pro devices to Windows 10 Enterprise E5.
Configure Azure AD Connect to sync the Montreal Users OU and the Seattle Users OU.

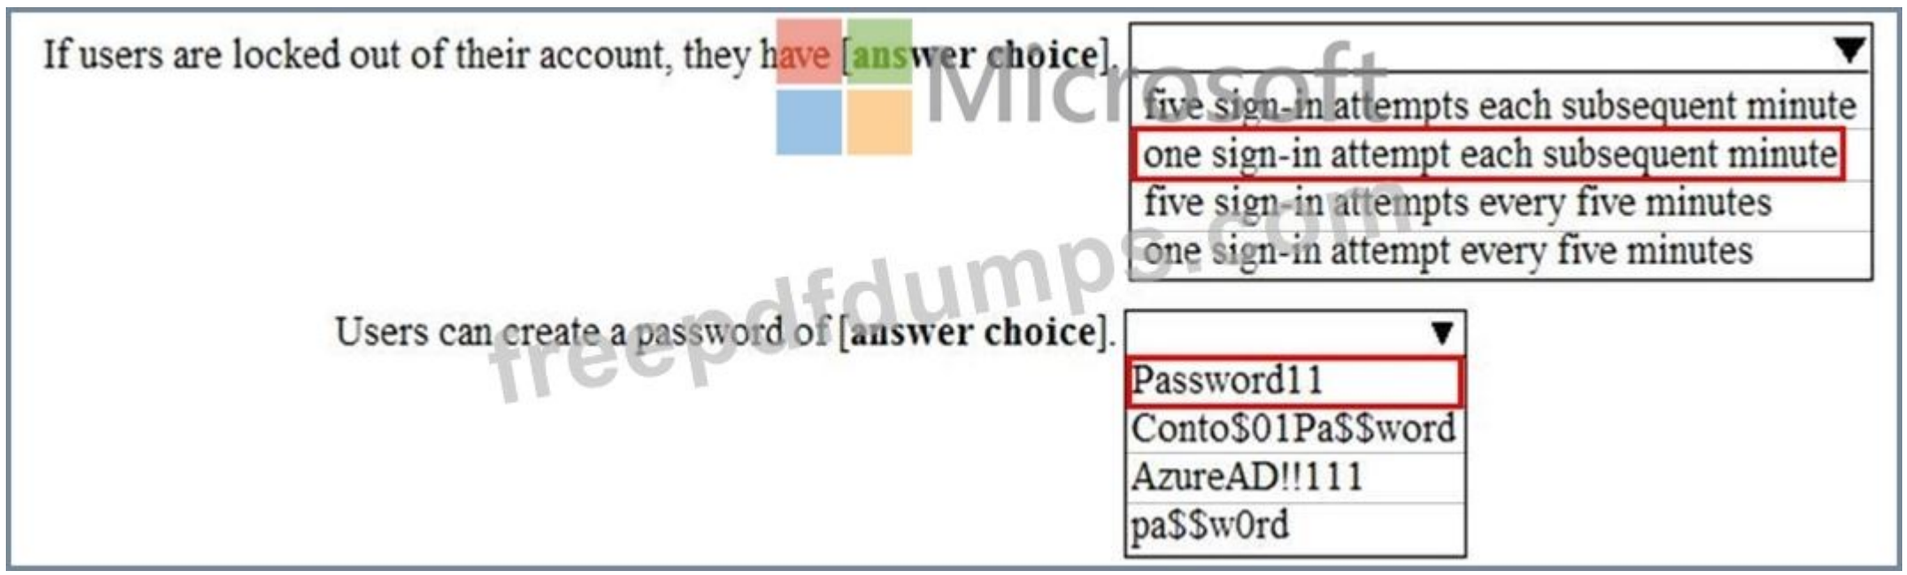
NEW QUESTION: 35
You have a Microsoft 365 Enterprise subscription.
You create a password policy as shown in the following exhibit.



Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad
https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-smart-lockout

NEW QUESTION: 36
You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).
Currently, App1 can read user profile information.
You need to allow App1 to read the user's calendar.
Solution: Perform a POST request against https://graph.microsoft.com/v1.0/me/events.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)

NEW QUESTION: 37

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.
You may now click next to proceed to the lab.
Lab information
Use the following login credentials as needed:
To enter your username, place your cursor in the Sign in box and click on the username below.
To enter your password, place your cursor in the Enter password box and click on the password below.
Microsoft 365 Username:
admin@M365x981607.onmicrosoft.com
Microsoft 365 Password: *yfLo7Ir2&y-
If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.
The following information is for technical support purposes only:
Lab Instance: 10811525
Your organization plans to open an office in New York, and then to add 100 users to the office. The city attribute for all new users will be New York.
You need to ensure that all the new users in the New York office are licensed for Microsoft Office 365 automatically.

Answer:

You need create a dynamic group based on the city attribute. You then need to assign a license to the group. User accounts with the city attribute set to 'New York will automatically be added to the group. Anyone who is added to the group will automatically be assigned the license that is assigned to the group.
1. Go to the Azure Active Directory admin center.
2. Select Azure Active Directory then select Groups.
3. Click on the New Group link.
4. Give the group a name such as New York Users.
5. Select Users as the membership type.
6. Select 'Add dynamic query'.
7. Select 'City' in the Property drop-down box.
8. Select 'Equals' in the Operator drop-down box.
9. Enter 'New York' as the Value. You should see the following text in the Expression box: user.city -eq "New York"
10. Click Save to create the group.
11. In the Groups list, select the new group to open the properties page for the group.
12. Select 'Licenses'.
13. Select the '+ Assignments' link.
14. Tick the box to select the license.
15. Click the Save button to save the changes.
Reference:

https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/groups-dynamic-membership
https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign

NEW QUESTION: 38
Your company has 500 client computers that run Windows 10.
You plan to deploy Microsoft Office 365 ProPlus to all the computers.
You create the following XML file for the planned deployment.

```
<Configuration>
 <Add OfficeClientEdition="64" Channel="Broad" ForceUpgrade="TRUE">
     <Product ID="0365ProPlusRetail">
          <Language ID="en-us"/>
          <ExcludeApp ID="Groove"/>
          <ExcludeApp ID="Publisher"/>
     </Product>
 </Add>
 <Updates Enabled="TRUE" Channel="Broad" Deadline="03/31/2019, 00:00"
UpdatePath="\\sccm\updates"/>
 <Display Level="Full" AcceptEULA="TRUE"/>
 <Property Name="FORCEAPPSHUTDOWN" Value="TRUE"/>
 <Property Name="SharedComputerLicensing" Value="0"/>
 <Property Name="PinIconsToTaskbar" Value="TRUE"/>
</Configuration>
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.
NOTE: Each correct selection is worth one point.

When the installation is complete [**answer choice**].
- all users will be prompted to accept the EULA
- all users will be prompted to install several updates
- all semi-channel updates will be installed automatically

Office 365 ProPlus will [**answer choice**].
- include Microsoft OneDrive for Business and Microsoft Outlook only
- be installed on all the computers
- be installed only on the computers that run a 64-bit version of Windows 10

Answer:

When the installation is complete [**answer choice**].
- all users will be prompted to accept the EULA
- all users will be prompted to install several updates
- all semi-channel updates will be installed automatically

Office 365 ProPlus will [**answer choice**].
- include Microsoft OneDrive for Business and Microsoft Outlook only
- be installed on all the computers
- be installed only on the computers that run a 64-bit version of Windows 10

https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool

NEW QUESTION: 39

Your network contains an on premises Active Directory domain named contoso.com. The domain contains five domain controllers.

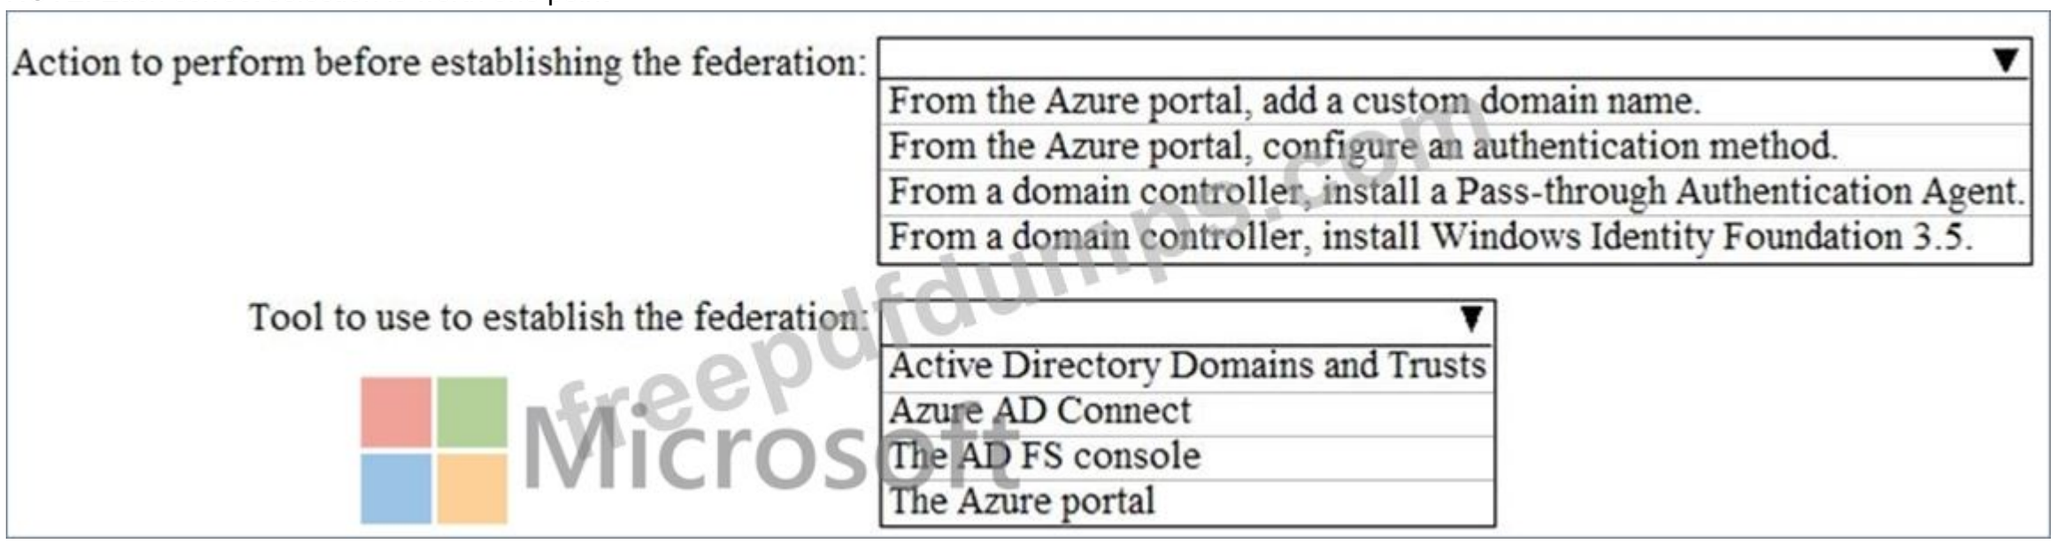
Your company purchases Microsoft 365 and creates a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

You plan to establish federation authentication between on premises Active Directory and the Azure AD tenant by using Active Directory Federation Services (AD FS).

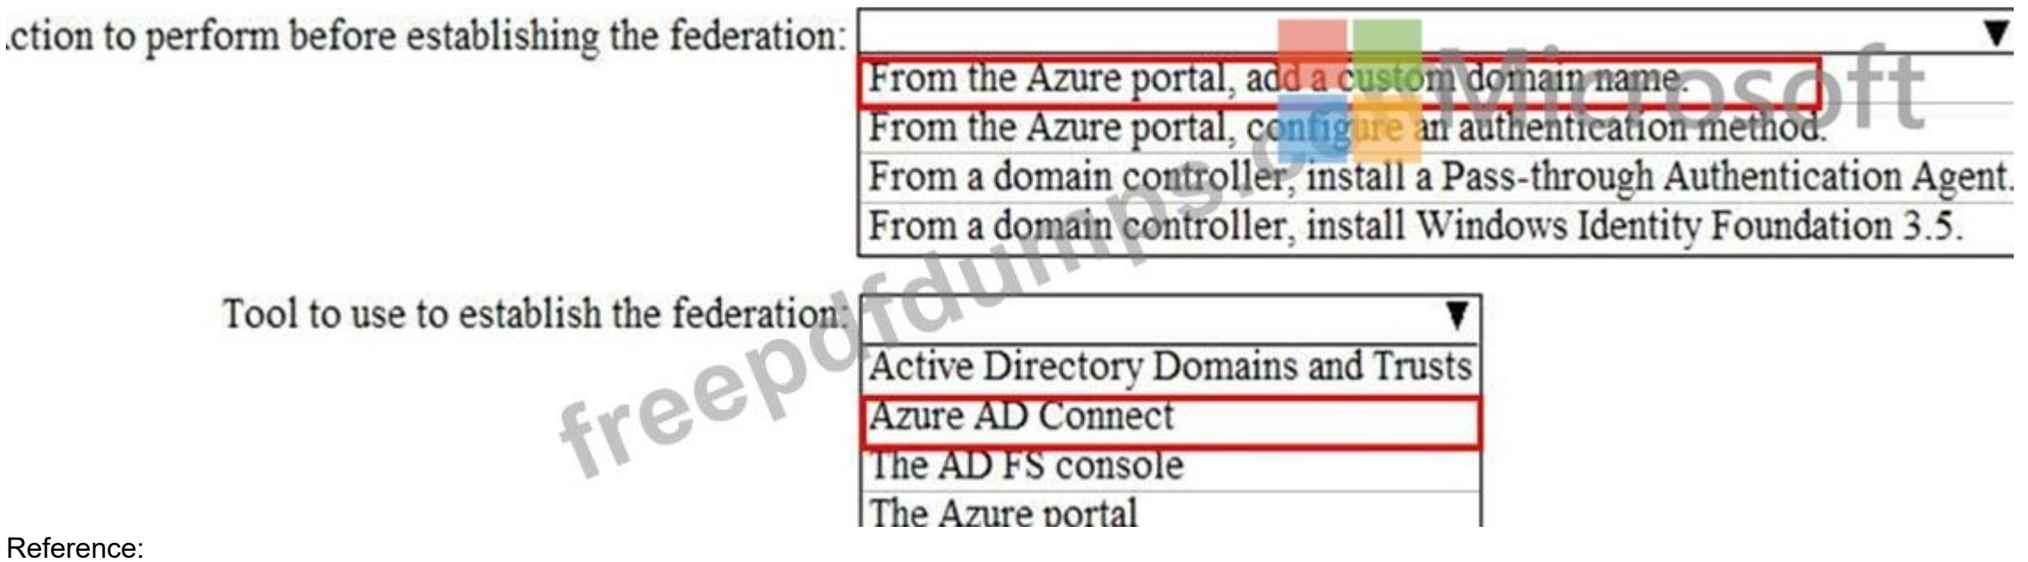
You need to establish the federation.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point



Answer:



Reference:

https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom#configuring-federation-with-ad-fs

NEW QUESTION: 40

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

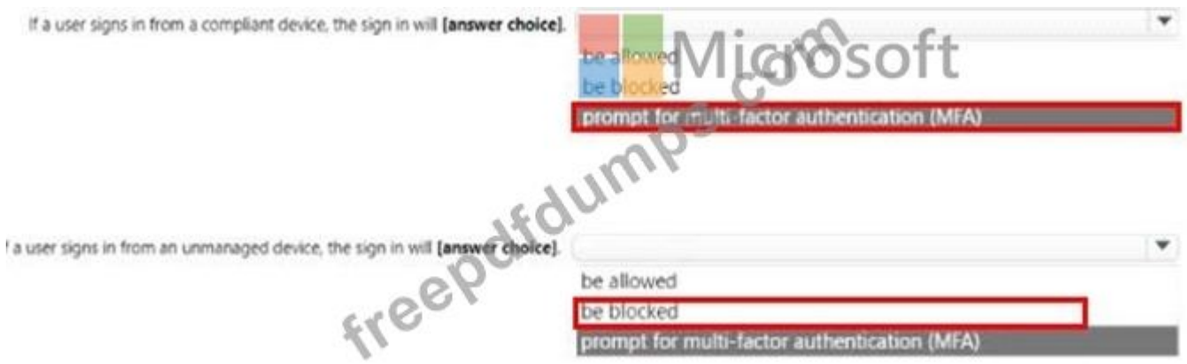
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company plans to deploy several Microsoft Office 365 services.
You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:
* Users must be able to authenticate during business hours only.
* Authentication requests must be processed successfully if a single server fails.
* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
Solution: You design an authentication strategy that contains a pass-through authentication model. You install an Authentication Agent on three servers and configure seamless SSO.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
This solution meets all the requirements:
Users must be able to authenticate during business hours only. (This can be configured by using Logon Hours in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory) Authentication requests must be processed successfully if a single server fails. (We have Authentication Agents running on three servers) When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in. (This can be configured in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory) Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically. (This goal is met by seamless SSO) Reference:
https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn

NEW QUESTION: 41
Your company has an Azure Active Directory (Azure AD) tenant named contoso.com that contains 10,000 users.
The company has a Microsoft 365 subscription.
You enable Azure Multi-Factor Authentication (MFA) for all the users in contoso.com.
You run the following query.
search "SigninLogs" | where ResultDescription == "User did not pass the MFA challenge." The query returns blank results.
You need to ensure that the query returns the expected results.
What should you do?
A. From the Azure Active Directory admin center, configure the diagnostics settings to archive logs to an Azure Storage account.
B. From the Security & Compliance admin center, turn on auditing.
C. From the Security & Compliance admin center, enable Office 365 Analytics.
D. From the Azure Active Directory admin center, configure the diagnostics settings to send logs to an Azure Log Analytics workplace.
Answer: D (LEAVE A REPLY)
You can now send audit logs to Azure Log Analytics. This gives you much easier reporting on audit events and the ability to perform queries such as the one in this question.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/howto-integrate-activity-logs-with-log-analytics

NEW QUESTION: 42
You have a Microsoft 365 subscription that has Conditional Access policy named Policy1. Policy1 is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

Answer:



NEW QUESTION: 43

You have three devices enrolled in Microsoft Intune as shown in the following table.

Name	Platform	BitLocker Drive Encryption (BitLocker)	Member of
Device1	Windows 10	Disabled	Group3
Device2	Windows 10	Disabled	Group2, Group3
Device3	Windows 10	Disabled	Group2

The device compliance policies in Intune are configured as shown in the following table.

Name	Platform	Require BitLocker	Assigned
Policy1	Windows 10 and later	Require	Yes
Policy2	Windows 10 and later	Not configured	Yes
Policy3	Windows 10 and later	Require	No

The device compliance policies have the assignment shown in the following table.

Name	Assigned to
Policy1	Group3
Policy2	Group2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
Device1 is compliant.	○	○
Device2 is compliant.	○	○
Device3 is compliant.	○	○

Answer:

Statements	Yes	No
Device1 is compliant.	○	○
Device2 is compliant.	○	○
Device3 is compliant.	○	○

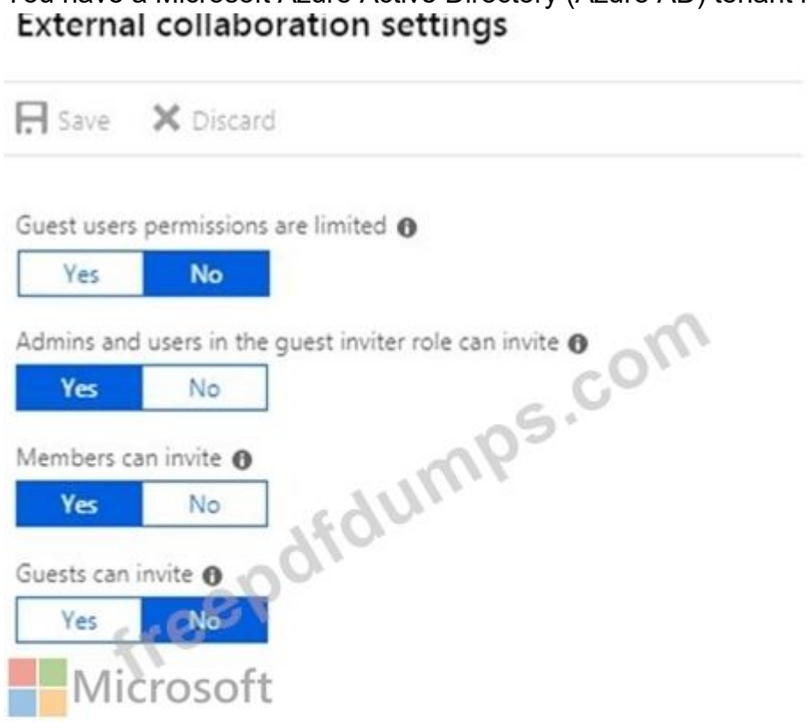
Reference:

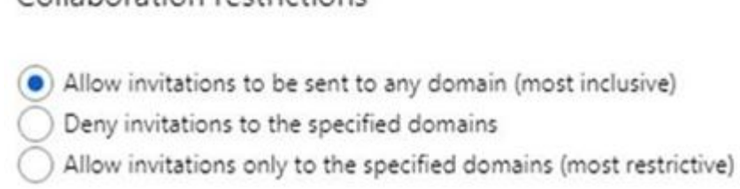
https://blogs.technet.microsoft.com/cbernier/2017/07/11/windows-10-intune-windows-bitlocker-management-yes/

NEW QUESTION: 44

You have a Microsoft 365 subscription that contains a guest user named User1. User1 is assigned the User administrator role.

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. Contoso.com is configured as shown in the following exhibit.





Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

User1 can [**answer choice**].

- open the Azure portal only
- open the Azure portal and view users only
- open the Azure portal, view users, and create new guest users only
- open the Azure portal, view users, create new users, and create new guest users

All other guest users can [**answer choice**].

- open the Azure portal only
- open the Azure portal and view users only
- open the Azure portal, view users, and create new guest users only
- open the Azure portal, view users, create new users, and create new guest users

Answer:

https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations
https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/users-default-permissions

NEW QUESTION: 45
You have a Microsoft 365 subscription that uses an Azure Directory (Azure AD) tenant named Contoso.com. The tenant contains the users shown in the following table.

Name	Role
User1	Exchange administrator
User2	User administrator
User3	Global administrator
User4	*None*

You add another user named user5 to the User administrator role.
You need to identify which management tasks User5 can perform.
Which two tasks should you identify? Each correct answer presents a complete solution.
A. Reset the password of any user in Azure AD.
B. Delete any user in Azure AD.
C. Reset the password of User2 and User4 only.
D. Reset the password of User4 only.
E. Delete User1, User2, and User4 only.
F. Delete User2 and User4 only.
Answer: (SHOW ANSWER)
Users with the User Administrator role can create users and manage all aspects of users with some restrictions (see below).
Only on users who are non-admins or in any of the following limited admin roles:
Directory Readers
Guest Inviter
Helpdesk Administrator
Message Center Reader
Reports Reader
User Administrator
Reference:

https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory-assign-admin-roles#available-roles

NEW QUESTION: 46

You have a Microsoft 365 subscription that uses an Azure AD tenant named contoso.com. The tenant contains the user's shown in the following table.

Name	Role
User1	Report reader
User2	User administrator
User3	Security administrator
User4	Global administrator

From the Sign-ins blade of the Azure Active Directory admin center, for which users can User1 and User2 view the sign-ins? To answer, select the appropriate options in the answer area.

Answer Area

Answer:

Answer Area

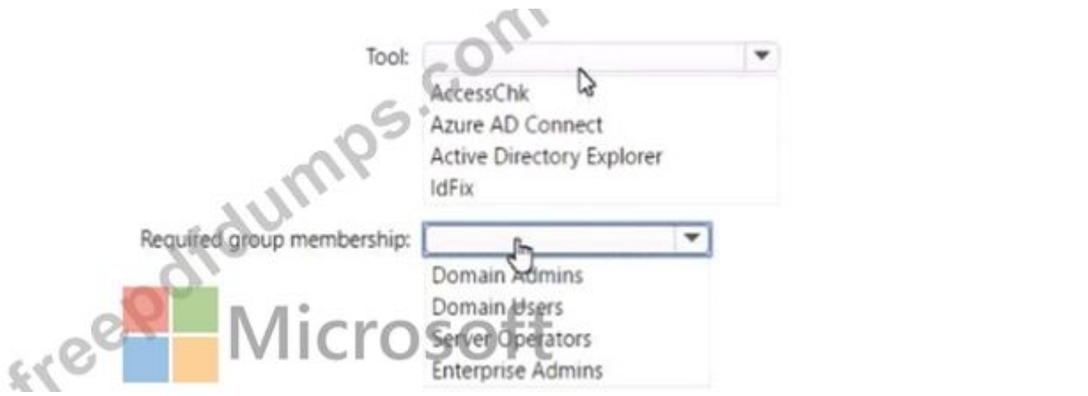
NEW QUESTION: 47
You are developing an interactive invoicing application mat will be used by end users. The application will have the following features:
* Save invoices generated by a user to the user s OneDrive for Business.
* Email daily automated reminders.
You need to identify which permissions to grant for the application features. The solution must use the principle of least privilege. Which permission type should you grant for each feature? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 48
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.
You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.
You need to be notified if the SharePoint policy is modified in the future.
Solution: From the SharePoint admin center, you modify the sharing settings.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
You need to create a threat management policy in the Security & Compliance admin center.

NEW QUESTION: 49
Your network contains an on-premises Active Directory domain.
You have a Microsoft 365 E5 subscription.
You plan to implement directory synchronization.
You need to identify potential synchronization issues for the domain. The solution must use the principle of least privilege What should you use? To answer, select the appropriate options in the answer area.



Answer:
Answer Area

NEW QUESTION: 50

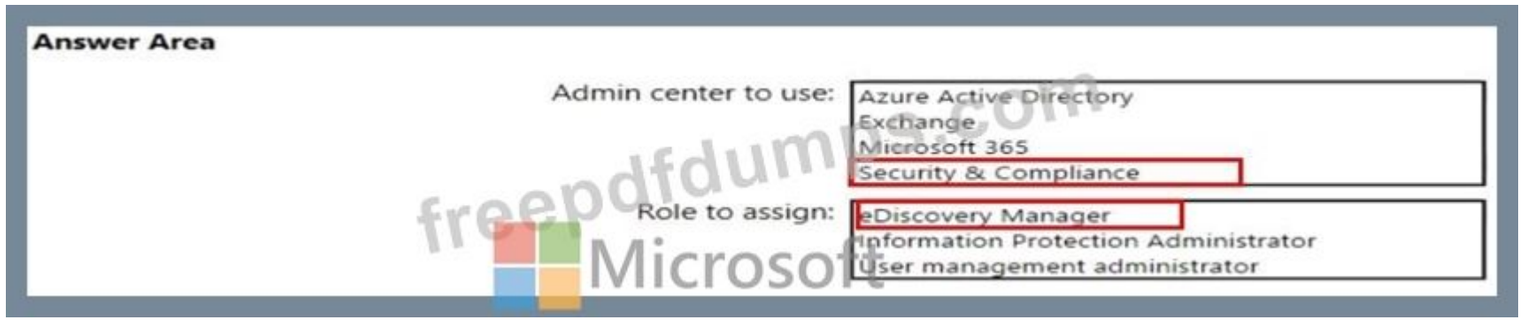
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.

Name	Type	Source
User1	User	Azure Active Directory (Azure AD)
User2	User	Windows Server Active Directory
Group1	Group	Cloud
Group2	Group	Windows Server Active Directory

Azure AD Connect has the following settings:
Password Hash Sync: Enabled
Password writeback: Enabled
Group writeback: Enabled
You need to add User2 to Group 2.
Solution: You use the Azure Active Directory admin center.
Does this meet the goal?
A. No
B. Yes
Answer: B (LEAVE A REPLY)

NEW QUESTION: 51
You have a Microsoft 365 subscription.
You need to provide an administrator named Admin1 with the ability to place holds on mailboxes, SharePoint Online sites, and OneDrive for Business locations. The solution must use the principle of least privilege.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.
Answer Area

Answer:



Reference:
https://docs.microsoft.com/en-us/office365/securitycompliance/permissions-in-the-security-and-compliance-center

NEW QUESTION: 52
You have a Microsoft 365 E5 subscription linked to an Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com. You plan to import the Microsoft Power Platform Center of Excellence (CoE) Starter Kit You need to configure the HTTP with Azure AD connection. Which base resource URL should you use?
A. https://login.microsoftonline.com/contoso.onmicrosoft.com
B. https://login.Microsoftonlinc.com/common/v2.0/oauth2/token
C. https://graph.microsoft.com
D. https://contoso.onmicrosoft.com
Answer: A (LEAVE A REPLY)

NEW QUESTION: 53
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an on-premises Active Directory forest named contoso.com. The forest contains the following domains:
* Contoso.com
* East.contoso.com
An Azure AD Connect server is deployed to contoso.com. Azure AD Connect syncs to an Azure Active Directory (Azure AD) tenant.
You deploy a new domain named west.contoso.com to the forest.
You need to ensure that west.contoso.com syncs to the Azure AD tenant.
Solution: You install a new Azure AD Connect server in west.contoso.com and set AD Connect to active mode.
Does this meet the goal?
A. No
B. Yes
Answer: B (LEAVE A REPLY)

NEW QUESTION: 54
Your company has a Microsoft 365 subscription.
You plan to move several archived PST files to Microsoft Exchange Online mailboxes.
You need to create an import job for the PST files.
Which three actions should you perform before you create the import job? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.
A. Create a Microsoft Azure Storage account.
B. From Security & Compliance, retrieve the SAS key.
C. Run azcopy.exe to copy the PST files to Microsoft Azure Storage
D. Use Microsoft Azure Storage Explorer to copy the PST files to Azure Storage.
E. Create a PST import mapping file.
Answer: B,C,E (LEAVE A REPLY)
The first step is to download and install the Azure AzCopy tool, which is the tool that you run in Step 2 to upload PST files to Office 365. You also copy the SAS URL for your organization. This URL is a combination of the network URL for the Azure Storage location in the Microsoft cloud for your organization and a Shared Access Signature (SAS) key. This key provides you with the necessary permissions to upload PST files to your Azure Storage location.
Now you're ready to use the AzCopy.exe tool to upload PST files to Office 365. This tool uploads and stores them in an Azure Storage location in the Microsoft cloud.
After the PST files have been uploaded to the Azure Storage location for your Office 365 organization, the next step is to create a comma-separated value (CSV) file that specifies which user mailboxes the PST files will be imported to. You'll submit this CSV file when you create a PST Import job.
Reference:
https://docs.microsoft.com/en-us/office365/securitycompliance/use-network-upload-to-import-pst-files

NEW QUESTION: 55
You need to configure the Office 365 service status notifications and limit access to the service and feature updates. The solution must meet the technical requirements.
What should you configure in the Microsoft 365 admin center? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:

Reference:
https://docs.microsoft.com/en-us/briefing/be-admin
https://docs.microsoft.com/en-us/microsoft-365/admin/manage/release-options-in-office-365?view=o365-worldwide Overview This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.
To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.
At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.
To start the case study
To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the question. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, n..... that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to ret..... to the question.

NEW QUESTION: 56
Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.
You sign up for Microsoft Store for Business.
The tenant contains the users shown in the following table.

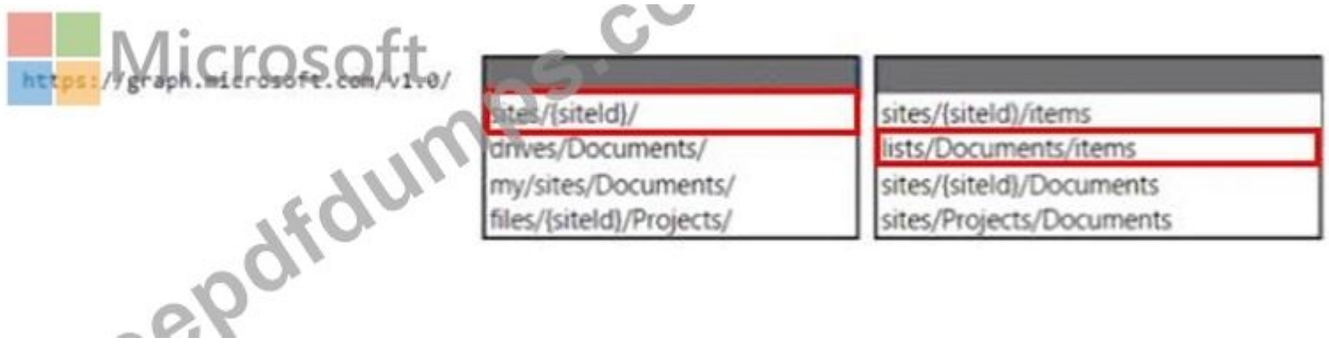
Name	Microsoft Store for Business role	Azure AD role
User1	Purchaser	*None*
User2	Basic Purchaser	*None*
User3	*None*	Application administrator
User4	*None*	Cloud application administrator
User5	*None*	*None*

Microsoft Store for Business has the following Shopping behavior settings:
Allow users to shop is set to On.
Make everyone a Basic Purchaser is set to Off.
You need to identify which users can install apps from the Microsoft for Business private store.
Which users should you identify?
A. user1, User2, User3, User4, and User5

B. User1 only
C. User1 and User2 only
D. User3 and User4 only
E. User1, User2, User3, and User4 only
Answer: C (LEAVE A REPLY)
Allow users to shop controls the shopping experience in Microsoft Store for Education. When this setting is on, Purchasers and Basic Purchasers can purchase products and services from Microsoft Store for Education.
Reference:
https://docs.microsoft.com/en-us/microsoft-store/acquire-apps-microsoft-store-for-business

NEW QUESTION: 57
You have a Microsoft 365 tenant that contains a Microsoft SharePoint Online site named Projects. You need to get a list of documents in the Documents library by using the Microsoft Graph API. How should you complete the query? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer:
Answer Area



NEW QUESTION: 58
Your on-permission network contains the web application shown in the following table.

Name	Hosted on server
App1	Web1
App2	Web1
App3	Web2
App4	Web2

You purchase Microsoft 365, and the implement directory synchronization.
You plan to publish the web applications.

You need to ensure that all the applications are accessible by using the My Apps portal. The solution must minimize administrative effort.
What should you do first?
A. Deploy one conditional access policy.
B. Deploy one Application Proxy connector.
C. Create four application registrations.
D. Create a site-to-site VPN from Microsoft Azure to the on-premises network.
Answer: (SHOW ANSWER)
The Application Proxy connector is what connects the on-premises environment to the Azure Application Proxy.
Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy
https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-connectors

NEW QUESTION: 59
Your network contains an Active Directory domain named contoso.com. The domain contains the file servers shown in the following table.

Name	IP address
Server1	192.168.1.10
Server2	192.168.2.10

A file named File1.abc is stored on Server1. A file named File2.abc is stored on Server2. Three apps named App1, App2, and App3 all open files that have the .abc file extension.
You implement Windows Information Protection (WIP) by using the following configurations:
Exempt apps: App2
Protected apps: App1
Windows Information Protection mode: Block
Network boundary: IPv4 range of 192.168.1.1-192.168.1.255
You need to identify the apps from which you can open File1.abc
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
You can open File1.abc in App1.	○	○
You can open File1.abc in App2.	○	○
You can open File1.abc in App3.	○	○

NEW QUESTION: 60
Your company has three main offices and one branch office. The branch office is used for research.
The company plans to implement a Microsoft 365 tenant and to deploy multi-factor authentication.
You need to recommend a Microsoft 365 solution to ensure that multi-factor authentication is enforced only for users in the branch office.
What should you include in the recommendation?
A. Microsoft Azure Active Directory (Azure AD) conditional access.
B. Microsoft Azure Active Directory (Azure AD) password protection.
C. a device compliance policy
D. a Microsoft Intune device configuration profile
Answer: A (LEAVE A REPLY)
With Azure Active Directory (Azure AD) Conditional Access, you can control how authorized users can access your cloud apps. The location condition of a Conditional Access policy enables you to tie access controls settings to the network locations of your users.
For this question, we need to configure a location condition in a conditional access policy and apply the policy to users in that location (the branch office). The conditional access policy can be required to 'Allow Access' but 'Required MFA'.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition

NEW QUESTION: 61
You plan to deploy Microsoft Teams to 2,500 users.
You need to estimate the internet bandwidth required for the deployment.
What should you use?
A. Advisor for Teams
B. Network planner
C. Skype for Business Server Remote Connectivity Test
D. Microsoft Remote Connectivity Analyzer
Answer: (SHOW ANSWER)
From: https://docs.microsoft.com/en-us/microsoftteams/network-planner
Network Planner is a new tool that is available in the Teams admin center. It can be found by going to Planning > Network planner. In just a few steps, the Network Planner can help you determine and organize network requirements for connecting Microsoft Teams users across your organization. When you provide your network details and Teams usage, the Network Planner calculates your network requirements for deploying Teams and cloud voice across your organization's physical locations.

NEW QUESTION: 62
You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1.
You enable Azure AD Identity Protection.
You need to ensure that User1 can review the list in Azure AD Identity Protection of users flagged for risk. The solution must use the principle of least privilege.
To which role should you add User1?
A. Security reader
B. User administrator
C. Service administrator
D. Reports reader
Answer: A (LEAVE A REPLY)
Either one of the following three roles can review the list in Azure AD Identity Protection of users flagged for risk:
Security Administrator
Global Administrator
Security Reader
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-risky-sign-ins

NEW QUESTION: 63
This question requires that you evaluate the underlined text to determine if it is correct-In Microsoft Word on Windows, before you can sideload a Microsoft Office Add-in, you must firs: upload the manifest to Microsoft OneDrive instructions: Review the underlined text. If it makes the statement correct select "No change is needed," If the statement is incorrect select the answer choice that makes the statement correct
A. deploy the manifest to an Azure website
B. No change is needed.
C. publish the manifest to a trusted network location
D. set Microsoft Edge to Developer Mode
Answer: (SHOW ANSWER)

NEW QUESTION: 64
You have a Microsoft 365 E5 subscription that contains an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains a Microsoft SharePoint Online site named Site1 and the accounts shown in the following table.

Name	Account type
UserA	User
UserB	User
GroupA	Security group

You have an on-premises server named Server1 that contains a folder named Folder1. Folder1 contains the files shown in the following table.

Name	Permission
File1	User1: Full control
File2	User2: Modify
File3	Group1: Full control

The User1, User2, and Group1 accounts have the security identifiers (SIDs) shown in the following table.

Name	SID
User1	S-1-5-21-4534338-1127018997-2609994386-1304
User2	S-1-5-21-4534338-1127018997-2609994386-1228
Group1	S-1-5-21-4534338-1127018997-2609994386-1106

You use the SharePoint Migration Tool to migrate Folder1 to Site1. You preserve the file share permissions and use the following user mapping file.

S-1-5-21-4534338-1127018997-2609994386-1304, UserA@Contoso.com, FALSE

S-1-5-21-4534338-1127018997-2609994386-1228, UserB@Contoso.com, FALSE

S-1-5-21-4534338-1127018997-2609994386-1106, GroupA, TRUE

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point

Statements	Yes	No
UserA is the owner of File1 on Site1.	○	○
UserB is the owner of File2 on Site1.	○	○
GroupA is the owner of File3 on Site1.	○	○

Answer:

Statements	Yes	No
UserA is the owner of File1 on Site1.	○	○
UserB is the owner of File2 on Site1.	○	○
GroupA is the owner of File3 on Site1.	○	○

NEW QUESTION: 65

Your company has a Microsoft 365 subscription that contains the following domains:

Contoso.onmicrosoft.com

Contoso.com

You plan to add the following domains to Microsoft 365 and to use them with Exchange Online:

Sub1.contoso.onmicrosoft.com

Sub2.contoso.com

Fabrikam.com

You need to identify the minimum number of DNS records that must be added for Exchange Online to receive inbound email messages for the three domains.

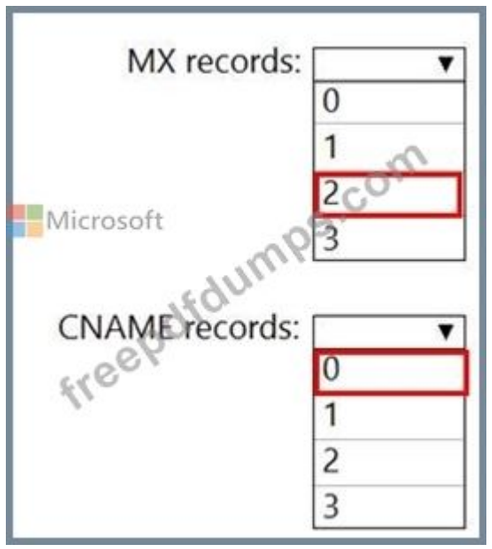
How many DNS records should you add? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

MX records: ▼
- 0
- 1
- 2
- 3

CNAME records: ▼
- 0
- 1
- 2
- 3

Answer:



NEW QUESTION: 66
You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com.
A temporary employee at your company uses an email address of user1@outlook.com.
You need to ensure that the temporary employee can sign in to contoso.com by using the user1@outlook.com account.
What should you do?
A. From the Azure Active Directory admin center, create a new user.
B. From the Microsoft 365 admin center, create a new contact.
C. From the Azure Active Directory admin center, create a new guest user.
D. From the Microsoft 365 admin center, create a new user.
Answer: C (LEAVE A REPLY)
You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.
The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator

NEW QUESTION: 67
You have a Microsoft 365 Enterprise E5 subscription.
You add a cloud-based app named App1 to the Microsoft Azure Active Directory (Azure AD) enterprise applications list.
You need to ensure that two-step verification is enforced for all user accounts the next time they connect to App1.
Which three settings should you configure from the policy? To answer, select the appropriate settings in the answer area.

NEW QUESTION: 68
You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.
In the tenant, you create a user named User1.
You need to ensure that User1 can publish retention labels from the Security & Compliance admin center. The solution must use the principle of least privilege.
To which role group should you add User1?
A. Security Administrator
B. Records Management
C. Compliance Administrator
D. eDiscovery Manager
Answer: (SHOW ANSWER)

Members of your compliance team who will create retention labels need permissions to the Security & Compliance Center. By default, your tenant admin has access to this location and can give compliance officers and other people access to the Security & Compliance Center, without giving them all of the permissions of a tenant admin. To do this, we recommend that you go to the Permissions page of the Security & Compliance Center, edit the Compliance Administrator role group, and add members to that role group.
Reference:
https://docs.microsoft.com/en-us/microsoft-365/compliance/labels#permissions

NEW QUESTION: 69
You have a Microsoft 365 subscription that uses a default named contoso.com.
Three files were created on February 1, 2019, as shown in the following table.

Name	Stored in
File1	Microsoft OneDrive
File2	A Microsoft SharePoint library
File3	Microsoft Exchange Online email

On March 1, 2019, you create two retention labels named Label1 and label2.
The settings for Label1 are configured as shown in the Label1 exhibit. (Click the Label1 tab.) Label 1

The settings for Label2 are configured as shown in the Label1 exhibit. (Click the Label2 tab.) Label 2

You apply the retention labels to Exchange email, SharePoint sites, and OneDrive accounts.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	No
File1 will be deleted automatically on February1, 2020.	○	○
If User1 does not complete the disposition review within 90 days of receiving the notification, File2 will be deleted automatically after February 1, 2021.	○	○
File3 will be deleted automatically after February 1, 2021.	○	○

Answer:

Statements	Yes	No
File1 will be deleted automatically on February1, 2020.	○	●
If User1 does not complete the disposition review within 90 days of receiving the notification, File2 will be deleted automatically after February 1, 2021.	○	●
File3 will be deleted automatically after February 1, 2021.	○	●

Reference:
https://docs.microsoft.com/en-us/office365/securitycompliance/labels
https://docs.microsoft.com/en-us/office365/securitycompliance/disposition-reviews

NEW QUESTION: 70
You receive the following JSON document when you use Microsoft Graph to query the current signed-in user.

```
{
    "@odata.context": "https://graph.microsoft.com/v1.0/$metadata#users/$entity",
    "businessPhones": [
        "+1 555 444 222"
    ],
    "displayName": "BenSmith",
    "givenName": "Ben",
    "jobTitle": "Developer",
    "mail": "ben.smith@contoso.com",
    "mobilePhone": "+1 555 444 222",
```

Answer Area

Statements	Yes	No
If you query a URI of `https://graph.microsoft.com/v1.0/me/photo/$value`, you will get the profile picture.	○	○
If you query a URI of `https://graph.microsoft.com/v1.0/users/ben.smith@contoso.com/photo/$value`, you will get the profile picture.	○	○
If you query a URI of `https://graph.microsoft.com/v1.0/users/5fa74bb7-b45b-426d-8ac7-446f090feeb5/photo/$value`, you will get the profile picture.	○	○

Answer:

NEW QUESTION: 71

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.
To enter your password, place your cursor in the Enter password box and click on the password below.
Microsoft 365 Username:
admin@LODSe426243.onmicrosoft.com
Microsoft 365 Password: 3&YWyjse-6-d
If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.
The following information is for technical support purposes only:
Lab Instance: 10887751
A user named Johanna Lorenz recently left the company. A new employee named Ben Smith will handle the tasks of Johanna Lorenz.
You need to create a user named Ben Smith. Ben Smith must be able to sign in to http://myapps.microsoft.com and open Microsoft Word Online.
Answer:
You need to create a user account and assign a license to the account. You then To create the user account and mailbox:
In the Microsoft 365 admin center, go to User management, and select Add user.
Enter the name Ben Smith in the First Name and Last Name fields.
Enter Ben.Smith in the username field and click Next.
Assign a Microsoft 365 license to the account.
Click Next.
Click Next again.
Click 'Finish adding'.

NEW QUESTION: 72
Your company has a Microsoft 365 subscription.
You need to identify all the users in the subscription who are licensed for Microsoft Office 365 through a group membership. The solution must include the name of the group used to assign the license.
What should you use?
A. the Licenses blade in the Azure portal
B. Reports in the Microsoft 365 admin center
C. Active users in the Microsoft 365 admin center
D. Report in Security & Compliance
Answer: A (LEAVE A REPLY)
In the Azure AD Admin Center, select Azure Active Directory then select Licenses to open the Licenses blade. From there you need to click on the 'Managed your purchased licenses link'. Select a license you want to view, for example Office 365 E3. This will then display a list of all users with that license. In the 'Assignment Paths' column, it will say 'Direct' for a license that has been assigned directly to a user or 'Inherited (Group Name)' for a license that has been assigned through a group.

https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign

NEW QUESTION: 73
You have a Microsoft Teams app that contains a conversational bot. The bot uses task modules to reply to users. When the hot receives a new message, the following code is executed before a response is sent back to the user to decide whether the bot should continue the conversation.

```
case "task/submit": {
    if (invokeValue.data !== undefined) {
        switch (invokeValue.data.taskResponse) {
            case "message":
                session.send("**task/submit results from the Adaptive card:**\n```" + JSON.stringify(invokeValue) + "```");
                break;
            case "continue":
                let fetchResponse = fetchTemplates.submitResponse;
                fetchResponse.task.value.card = renderACAttachment(cardTemplates.acSubmitResponse, { results: JSON.stringify(invokeValue.data) });
                cb(null, fetchResponse, 200);
                break;
```

NEW QUESTION: 74
You need to recommend which API object the SharePoint Framework (SPFx) intranet components will use to access the research department s project management solution. What should you recommend?

A. SPHttpClient
B. AadHttpClient
C. HSGraphClient
D. HttpClient

Answer: B (LEAVE A REPLY)

Reference:

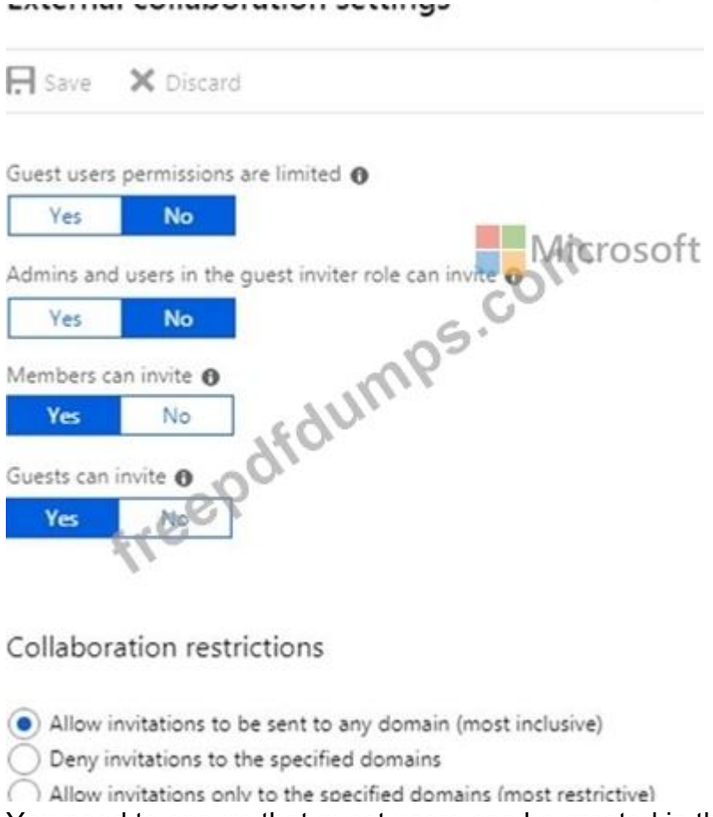
https://docs.microsoft.com/en-us/sharepoint/dev/spfx/use-aadhttpclient

NEW QUESTION: 75

You have a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. Contoso.com contains the users shown in the following table.

Name	Type	Role
User1	Member	*None*
User2	Member	Security administrator, Guest inviter
User3	Member	User administrator
User4	Guest	*None*

Contoso.com is configured as shown in the following exhibit.



You need to ensure that guest users can be created in the tenant.

Which setting should you modify?

A. Guests can invite.

B. Guest users permissions are limited.

C. Members can invite.

D. Admins and users in the guest inviter role can invite.

E. Deny invitations to the specified domains

Answer: (SHOW ANSWER)

The setting "Admins and users in the guest inviter role can invite" is set to No. This means that no one can create guest accounts because they cannot 'invite' guests. This setting needs to be changed to Yes to ensure that guest users can be created in the tenant.

Reference:
https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations

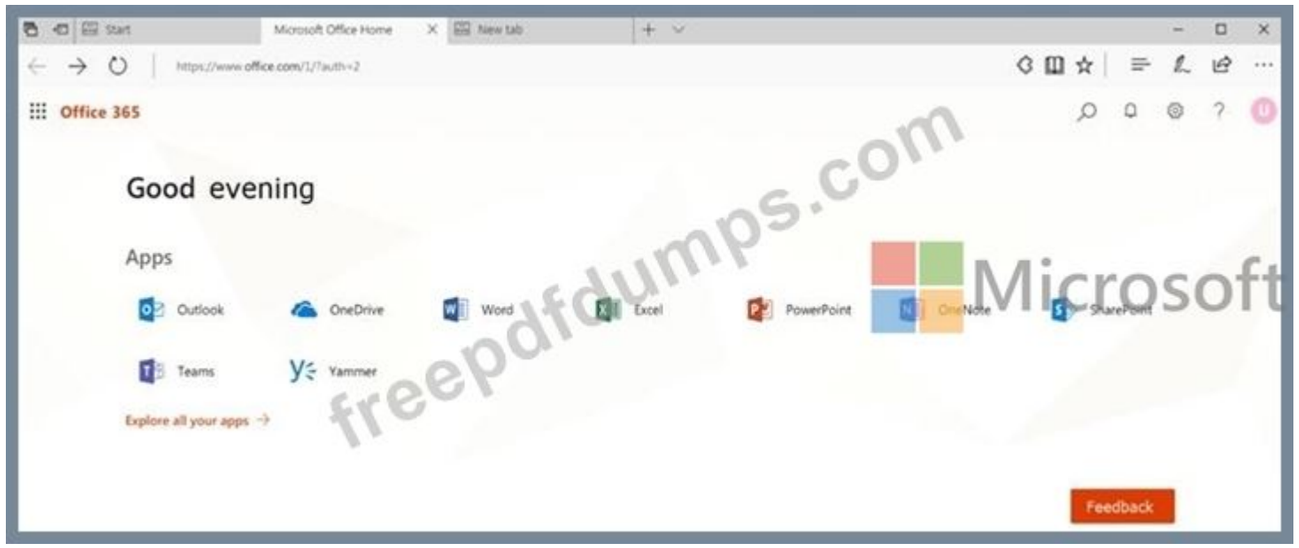
NEW QUESTION: 76
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company plans to deploy several Microsoft Office 365 services.
You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:
* Users must be able to authenticate during business hours only.
* Authentication requests must be processed successfully if a single server fails.
* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
Solution: You design an authentication strategy that contains a pass-through authentication model. The solution contains two servers that have an Authentication Agent installed and password hash synchronization configured.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
This solution meets the following goals:
Users must be able to authenticate during business hours only.
Authentication requests must be processed successfully if a single server fails.
When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
However, the following goal is not met:
Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
You would need to configure Single-sign on (SSO) to meet the last requirement.
Reference:
https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn

NEW QUESTION: 77
You have a Microsoft 365 E5 subscription.
All users are assigned a license to Microsoft 365 Apps for enterprise.
The users report that they do not have the option to install Microsoft 365 apps on their device as shown in the following exhibit.



You need to ensure that the users can install Microsoft 365 apps from the Office 365 portal.

What should you do?

A. From the Microsoft Endpoint Manager admin center, create a Microsoft 365 Apps app and assign the app to the users.

B. From the Microsoft 365 admin center, modify the Services & add-ins settings.

C. From the Microsoft Endpoint Manager admin center, create a Microsoft 365 Apps app and assign the app to the devices.

D. From the Microsoft 365 admin center, modify the user license settings.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 78

Your company has a main office and three new branch offices.

The company has a Microsoft 365 subscription.

From the Microsoft 365 admin center, you open Microsoft 365 network connectivity You need to configure the prerequisites for enabling Microsoft 365 network connectivity.

What should you do first?

A. Add location data to Microsoft 365.

B. Update organization information.

C. Enable Productivity Score.

D. Select a SD-WAN solution and the data location.

Answer: (SHOW ANSWER)

https://learn.microsoft.com/en-us/microsoft-365/enterprise/office-365-network-mac-perf-overview?view=o365-worldwide Pre-requisites for network connectivity assessments to appear To get started, turn on your location opt-in setting to automatically collect data from devices using Windows Location Services, go to your Locations list to add or upload location data, or run the Microsoft 365 network connectivity test from your office locations. These three options for office location information are detailed below. Whilst network connectivity can be evaluated across the organization, any network design improvements will need to be done for specific office locations. Network connectivity information is provided for each office location once those locations can be determined. There are three options for getting network assessments from your office locations:

NEW QUESTION: 79

Lab Instance: 11440873

Your organization plans to start a new collaborative project that will contain email and chat communications, as well as regular meetings.
You need to create a team in Microsoft Teams for the planned project. The team must have the following configurations:
Be named Project1.
Have an owner named Lee Gu.
Have a channel named Channel1.
To answer, sign in to the Microsoft 365 portal.

Answer:

You need to create a team. You can create a team in the Microsoft Teams Admin Center or in the Microsoft Teams app. However, to be able to specify the team owner when creating the team, you need to use the Teams Admin Center.

1. Go to the Microsoft Teams Admin Center.
2. In the left navigation pane, expand the Teams section and select 'Manage Teams'.
3. Click the '+ Add' link to add a new team.
4. Give the team the name Project1.
5. In the Team Owner field, remove your name which is there by default and add Lee Gu.
6. Click the 'Create a team' button to create the team.
7. In the teams list, select the Project1 team.
8. Click on 'Channels'.
9. Click the '+ Add' link to add a new channel.
10. Give the channel the name Channel1.
11. Click the Apply button to create the channel.

NEW QUESTION: 81

Your network contains an Active Directory domain.
You deploy a Microsoft Azure Active Directory (Azure AD) tenant.
Another administrator configures the domain the synchronization to Azure AD.
You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized to successfully.
You review Azure AD Connect Health and discover that all the user account synchronization completed.
You discover AD Connect Health and discover that at the user account synchronization to Azure AD.
Solution: You run idfix.exe and export the 10 user accounts.

A. No
B. Yes
Answer: (SHOW ANSWER)

NEW QUESTION: 82
You have Windows 10 devices that are managed by using Microsoft Endpoint Manager as shown in the following table.

Name	CPU	Member of	Installed apps
Device1	x86	Group1	Microsoft Office 2016
Device2	x86	Group1	None
Device3	x64	Group1	Microsoft Office 2019
Device4	x64	Group1	None

You create a Microsoft 365 Suite app as shown in the exhibit (Click the Exhibit Tab.) and assign The app to Group1. On which devices will Microsoft 365 Apps be installed?
A. Device 1 and Device2 only
B. Device1, Device2. and Device4 only
C. Device1, Device2, Device3, and Device4
D. Device2 and Device4 only
E. Device2 only
Answer: C (LEAVE A REPLY)

NEW QUESTION: 83
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company plans to deploy several Microsoft Office 365 services.
You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:
* Users must be able to authenticate during business hours only.
* Authentication requests must be processed successfully if a single server fails.

* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
Solution: You design an authentication strategy that contains a pass-through authentication model. The solution contains two servers that have an Authentication Agent installed and password hash synchronization configured.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
This solution meets the following goals:
Users must be able to authenticate during business hours only.
Authentication requests must be processed successfully if a single server fails.
When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
However, the following goal is not met:
Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
You would need to configure Single-sign on (SSO) to meet the last requirement.

Reference:
https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn

NEW QUESTION: 84
You have a Microsoft 365 subscription.
You recently configured a Microsoft SharePoint Online tenant in the subscription.
You plan to create an alert policy.
You need to ensure that an alert is generated only when malware is detected in more than five documents stored in SharePoint Online during a period of 10 minutes.
What should you do first?
A. Enable Microsoft Office 365 Cloud App Security.
B. Deploy Windows Defender Advanced Threat Protection (Windows Defender ATP).
C. Enable Microsoft Office 365 Analytics.
Answer: B (LEAVE A REPLY)
An alert policy consists of a set of rules and conditions that define the user or admin activity that generates an alert, a list of users who trigger the alert if they perform the activity, and a threshold that defines how many times the activity has to occur before an alert is triggered.
In this question, we would use the "Malware detected in file" activity in the alert settings then configure the threshold (5 detections) and the time window (10 minutes).
The ability to configure alert policies based on a threshold or based on unusual activity requires Advanced Threat Protection (ATP).
Reference:
https://docs.microsoft.com/en-us/microsoft-365/compliance/alert-policies

NEW QUESTION: 85
You need to meet the security requirement for the vendors.
What should you do?
A. From the Azure portal, add an identity provider.
B. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify the -UserPrincipalName parameter.
C. From the Azure portal, create guest accounts.
D. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify the -UserType parameter.
Answer: (SHOW ANSWER)
You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.
The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the vendors already have Microsoft accounts so they can authenticate using them.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator

NEW QUESTION: 86
You have a Microsoft 365 subscription
You have an Azure AD tenant that contains the users shown in the following table.

Name	Role
User1	Security administrator
User2	Global administrator
User3	Service support administrator

You configure Tenant properties as shown in the following exhibit

Which users will be contacted by Microsoft if the tenant experiences a data breach?

A. User3 only
B. User2 only
C. User1 and User2 only
D. User2 and User3 only
E. User1 only

Answer: (SHOW ANSWER)

NEW QUESTION: 87

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@LODSe426243.onmicrosoft.com

Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751
You hire a new Microsoft 365 administrator named Nestor Wilke. Nestor Wilke will begin working for your organization in several days.
You need to ensure that Nestor Wilke is prevented from using his account until he begins working.
Answer:
You need to sign-in status for the account to 'Blocked'. Blocking doesn't stop the account from receiving email and it doesn't delete any data.
1. On the home page of the Microsoft 365 admin center, type the user's name into the Search box.
2. Select the Nestor Wilke account in the search results.
3. In the 'Sign-in status' section of the account properties, click the Edit link.
4. Select 'Block the user from signing in' and click the Save button.

NEW QUESTION: 88
Your company has two offices. The offices are located in Seattle and New York.
The company uses a third-party email system.
You implement Microsoft 365.
You move all the users in the Seattle office to Exchange Online. You configure Microsoft 365 to successfully receive all the email messages sent to the Seattle office users.
All the users in the New York office continue to use the third-party email system.
The users use the email domains shown in the following table.

Users in	Email domain
Seattle	Contoso.com
New York	Adatum.com

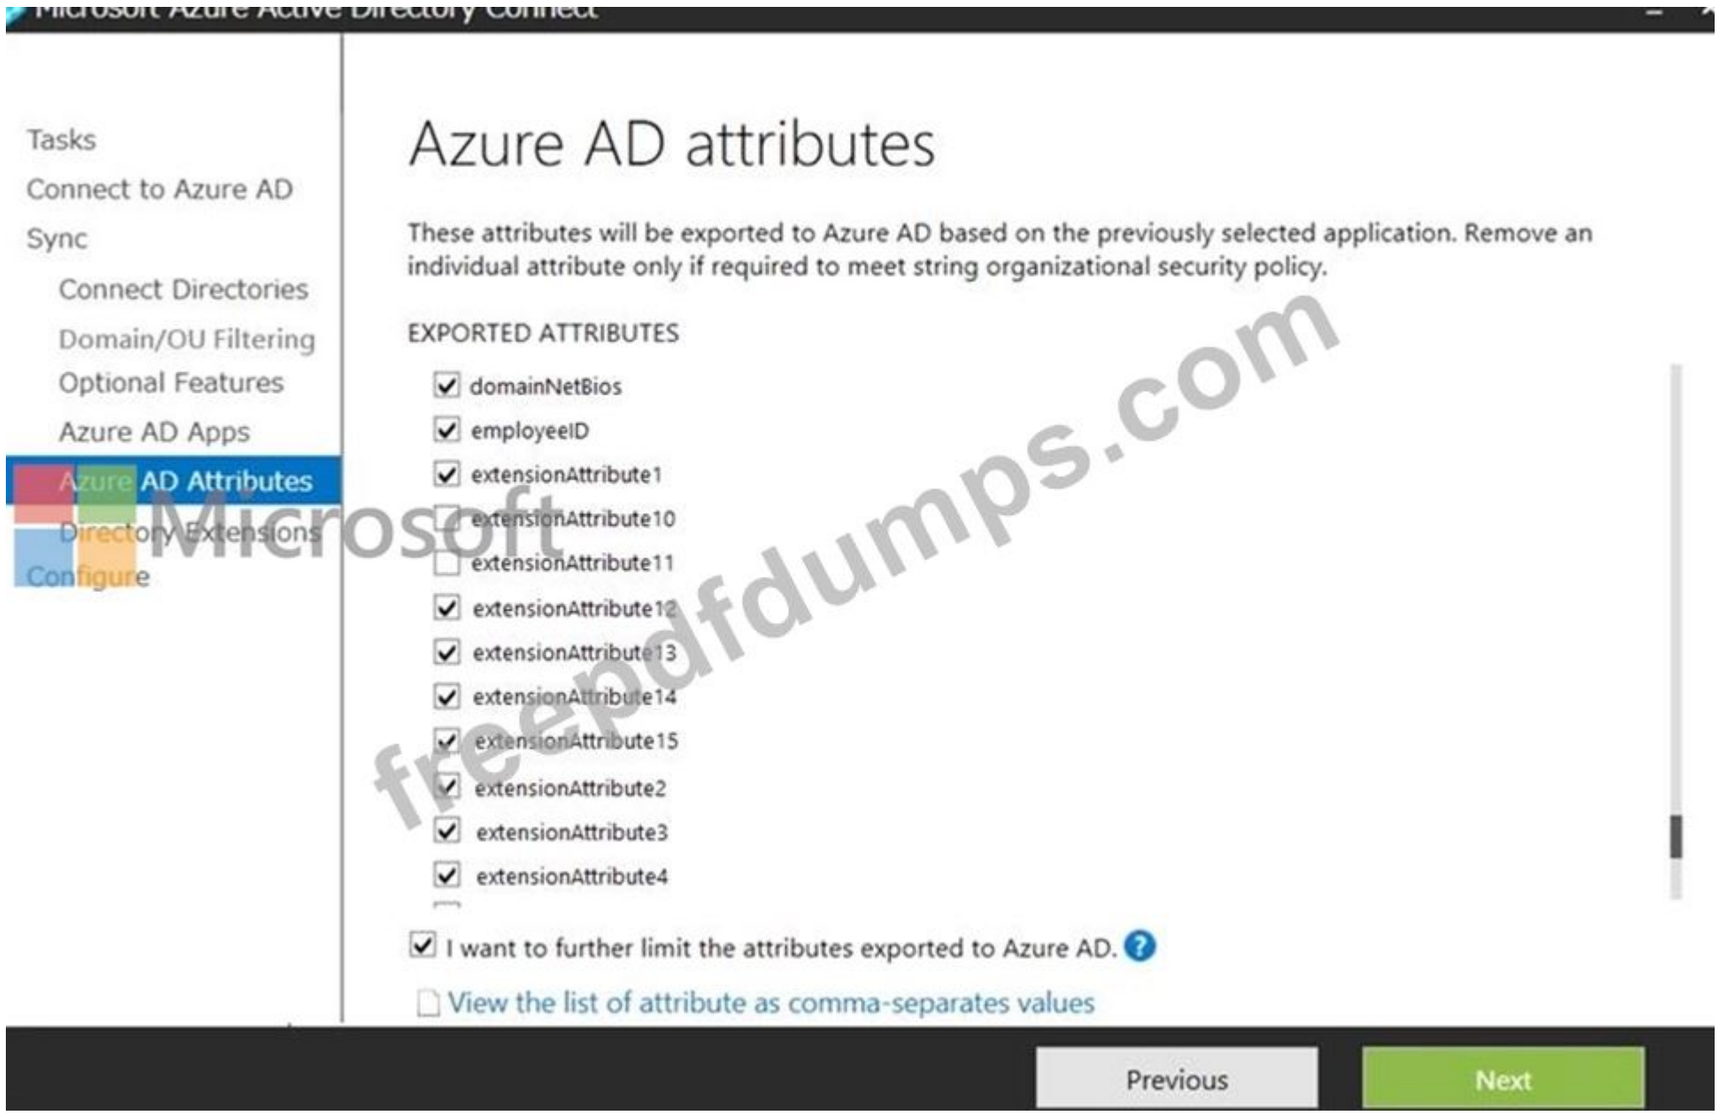
You need to ensure that all the email messages sent to the New York office users are delivered successfully. The solution must ensure that all the email messages for the users in both offices are routed through Microsoft 365.
You create the required DNS records and Send connectors.
What should you do next from Microsoft 365?
A. From Microsoft 365 admin center, set the default domain. From the Exchange admin center, create a transport rule for all the email messages sent to adatum.com.
B. From Microsoft 365 admin center, add the adatum.com domain. From the Exchange admin center, configure adatum.com as an internal relay domain.
C. From Microsoft 365 admin center, add the adatum.com domain. From the Exchange admin center, configure adatum.com as an authoritative domain.
D. From Microsoft 365 admin center, set the default domain. From the Exchange admin center, configure adatum.com as a remote domain.
Answer: (SHOW ANSWER)
The first step is to configure Exchange Online to accept emails for the adatum.com domain. To do this, we add the domain in Microsoft 365. When you add your domain to Microsoft 365, it's called an accepted domain.
The next step is to tell Exchange Online what to do with those emails. You need to configure the adatum.com domain as either an authoritative domain or an internal relay domain.
Authoritative domain means that the mailboxes for that domain are hosted in Office 365. In this question, the mailboxes for the adatum.com domain are hosted on the third-party email system. Therefore, we need to configure the adatum.com domain as an internal relay domain. For an internal relay domain, Exchange Online will receive the email for the adatum.com domain and then 'relay' (forward) the email on to the third-party email server.
Reference:
https://docs.microsoft.com/en-us/exchange/mail-flow-best-practices/manage-accepted-domains/manage-accepted-domains

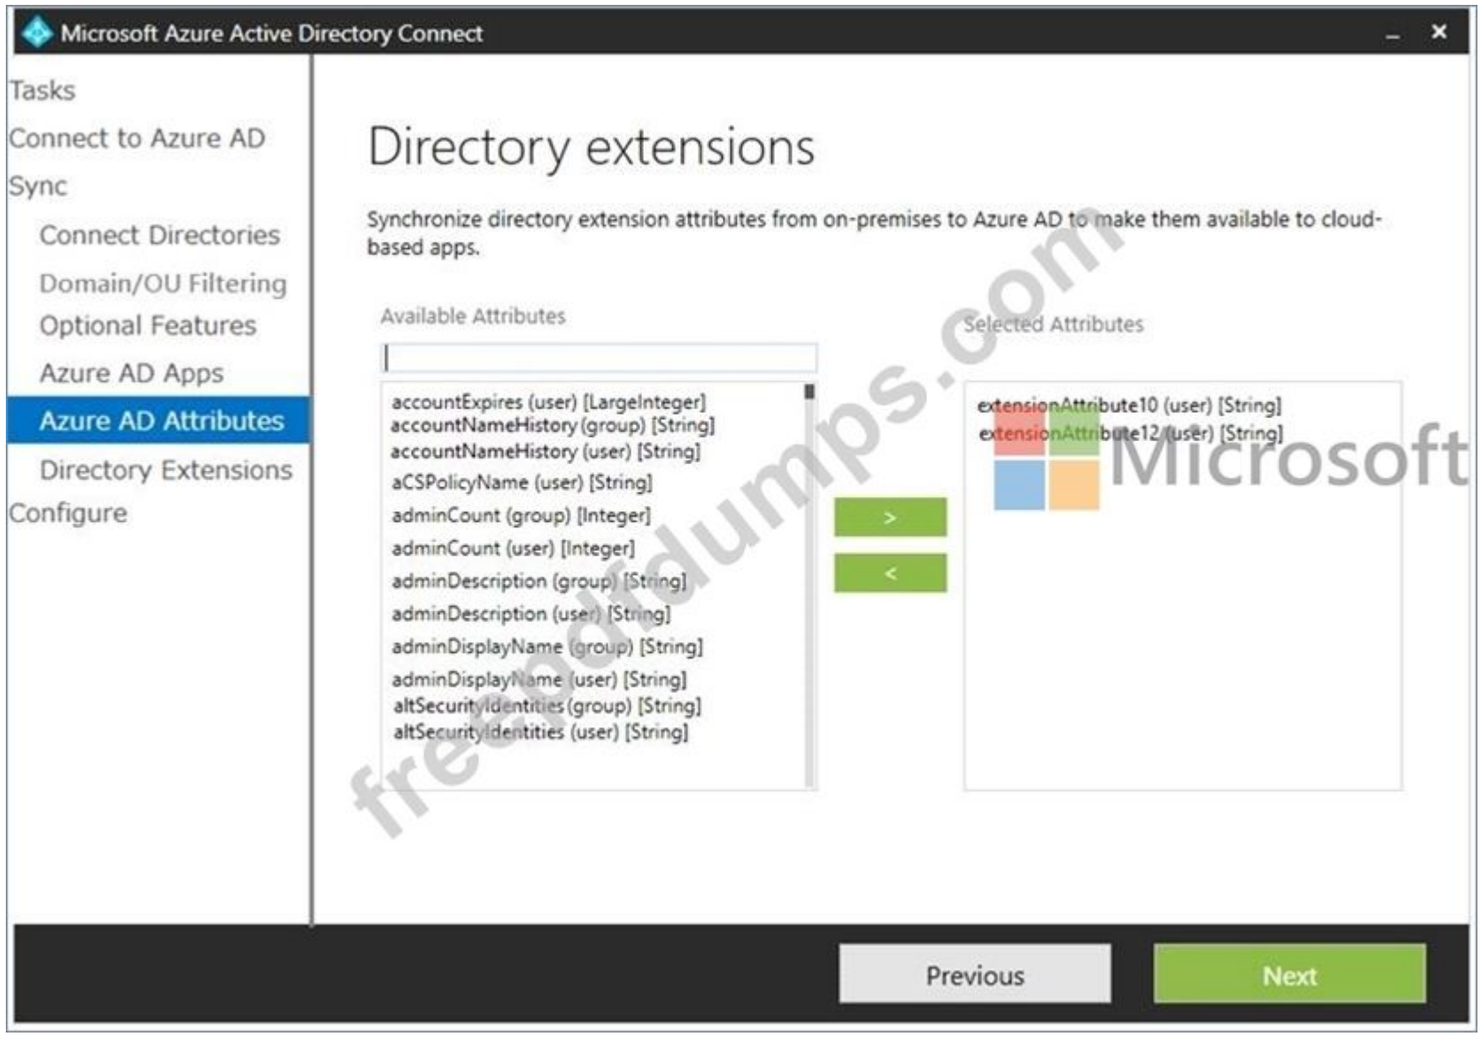
NEW QUESTION: 89

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company plans to deploy several Microsoft Office 365 services.
You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:
* Users must be able to authenticate during business hours only.
* Authentication requests must be processed successfully if a single server fails.
* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.
Solution: You design an authentication strategy that contains a pass-through authentication model. You install an Authentication Agent on three servers and configure seamless SSO.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
This solution meets all the requirements:
Users must be able to authenticate during business hours only. (This can be configured by using Logon Hours in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory) Authentication requests must be processed successfully if a single server fails. (We have Authentication Agents running on three servers) When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in. (This can be configured in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory) Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically. (This goal is met by seamless SSO) Reference:
https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn

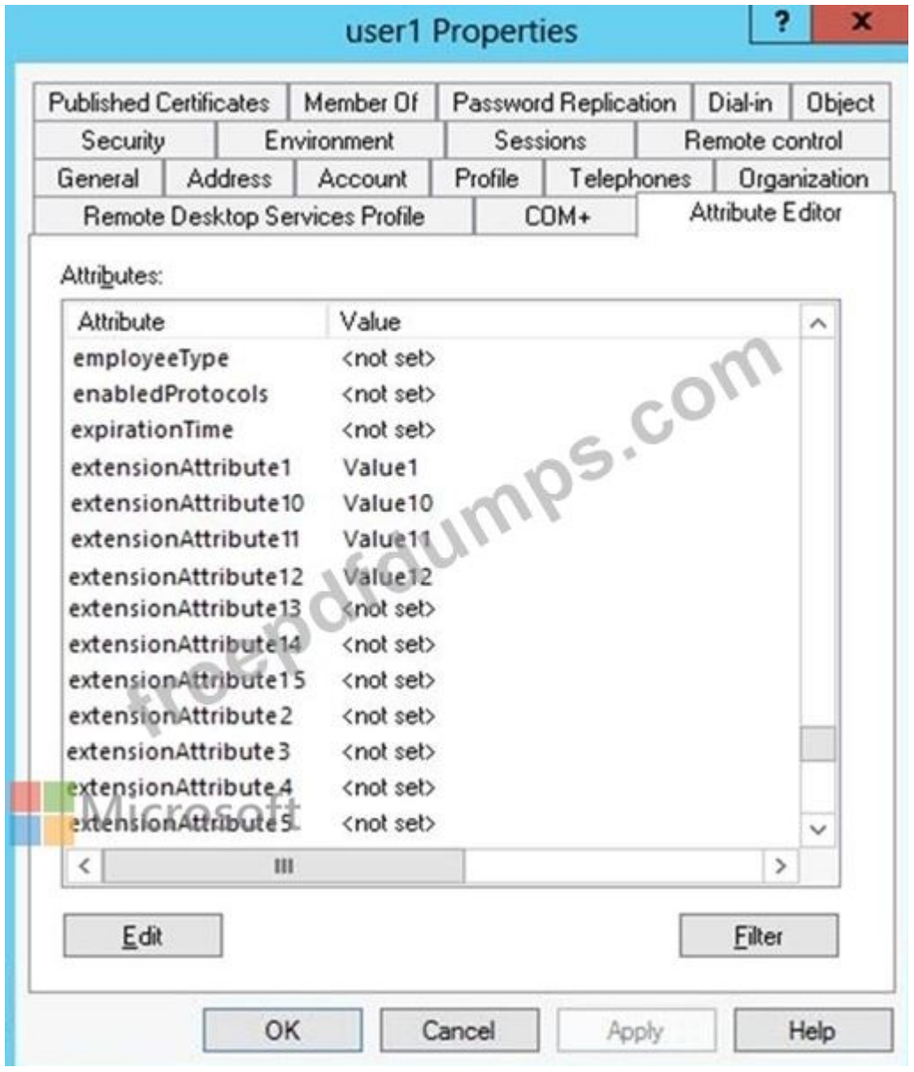
NEW QUESTION: 90
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a Microsoft 365 subscription.
You discover that some external users accessed content on a Microsoft SharePoint site. You modify the SharePoint sharing policy to prevent sharing outside your organization.
You need to be notified if the SharePoint policy is modified in the future.
Solution: From the SharePoint site, you create an alert.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
You need to create a threat management policy in the Security & Compliance admin center.

NEW QUESTION: 91
Your network contains an on-premises Active Directory domain that is synced to Microsoft Azure Active Directory (Azure AD) as shown in the following two exhibits.





You create a user named User1 in Active Directory as shown in the following exhibit.

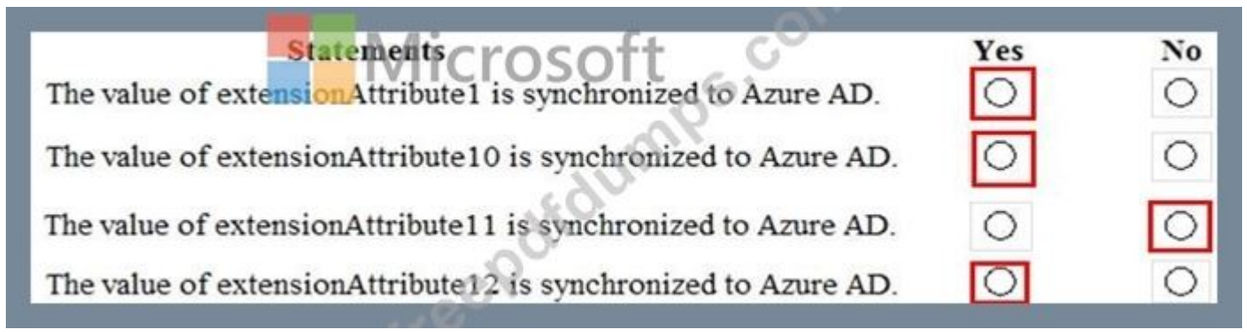


For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
The value of extensionAttribute1 is synchronized to Azure AD.	○	○
The value of extensionAttribute10 is synchronized to Azure AD.	○	○
The value of extensionAttribute11 is synchronized to Azure AD.	○	○
The value of extensionAttribute12 is synchronized to Azure AD.	○	○

Answer:



Reference:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-feature-directory-extensions
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom

NEW QUESTION: 92
You have a Microsoft 365 subscription.
You suspect that several Microsoft Office 365 applications or services were recently updated.
You need to identify which applications or services were recently updated.
What are two possible ways to achieve the goal? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.
A. From the Microsoft 365 admin center, review the Message center blade.
B. From the Office 365 Admin mobile app, review the messages.
C. From the Microsoft 365 admin center, review the Products blade.
D. From the Microsoft 365 admin center, review the Service health blade.
Answer: A,B (LEAVE A REPLY)
The Message center in the Microsoft 365 admin center is where you would go to view a list of the features that were recently updated in the tenant. This is where Microsoft posts official messages with information including new and changed features, planned maintenance, or other important announcements.
The messages displayed in the Message center can also be viewed by using the Office 365 Admin mobile app.
Reference:
https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide
https://docs.microsoft.com/en-us/office365/admin/admin-overview/admin-mobile-app?view=o365-worldwide

NEW QUESTION: 93
Your company has an on-premises Microsoft SharePoint Server environment and a Microsoft 365 subscription.
When users search for content from Microsoft 365, you plan to include content from the on-premises SharePoint Server environment in the results.
You need to add crawled metadata from the on-premises SharePoint Server content to the Microsoft Office 365 search index.
What should you do first?

A. Run the SharePoint Hybrid Configuration Wizard.
B. Create a site collection that uses the Enterprise Search Center template.
C. Create a site collection that uses the Basic Search Center template.
D. Run the SharePoint Migration Tool.
Answer: A (LEAVE A REPLY)

NEW QUESTION: 94
You have a Microsoft 365 E5 subscription that contains the users shown in the following table.

Name	Role
Admin1	Exchange Administrator
Admin2	SharePoint Administrator
Admin3	Global Reader
Admin4	Usage Summary Reports Reader

You enable Microsoft 365 usage analytics tor Microsoft Power BI.
Which users can use Power BI to connect to Microsoft 365 usage analytics and review usage analytics reports?
A. Admin 1 and Admin2 only
B. Admin3 only
C. Admin1, Admm2, and Admm3 only
D. Admin3 and Admin4 only
E. Admm1, Admm2, Admin3, and Admin4
Answer: B (LEAVE A REPLY)

NEW QUESTION: 95
A user receives the following message when attempting to sign in to https://myapps.microsoft.com:
"Your sign-in was blocked. We've detected something unusual about this sign-in. For example, you might be signing in from a new location, device, or app. Before you can continue, we need to verify your identity. Please contact your admin." Which configuration prevents the users from signing in?
A. Security & Compliance supervision policies
B. Security & Compliance data loss prevention (DLP) policies
C. Microsoft Azure Active Directory (Azure AD) conditional access policies
D. Microsoft Azure Active Directory (Azure AD) Identity Protection policies
Answer: (SHOW ANSWER)
The user is being blocked due to a 'risky sign-in'. This can be caused by the user logging in from a device that hasn't been used to sign in before or from an unknown location.
Integration with Azure AD Identity Protection allows Conditional Access policies to identify risky sign-in behavior. Policies can then force users to perform password changes or multi-factor authentication to reduce their risk level or be blocked from access until an administrator takes manual action.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/overview

NEW QUESTION: 96
You have a backend service that will access the Microsoft Graph API. The backend service is hosted on-premises. You need to configure the service to authenticate by using the most secure authentication method. What should you configure the service to use?
A. a certificate

B. a client secret
C. a hash
D. a shared key
Answer: A (LEAVE A REPLY)

NEW QUESTION: 97
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).
You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).
You configure a pilot for co-management.
You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.
You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager.
Solution: Define a Configuration Manager device collection as the pilot collection. Add Device1 to the collection.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration Manager.
To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection so that it auto-enrols in Microsoft Intune. You will then be able to manage Device1 using Microsoft Intune.
Reference:
https://docs.microsoft.com/en-us/configmgr/comanage/how-to-enable

NEW QUESTION: 98
You have a Microsoft 365 E5 subscription that contains the users shown in the following table.

Name	Member of	Multi-Factor Auth Status
User1	Group1	Disabled
User2	Group1, Group2	Enabled
User3	Group2	Disabled

You configure a multi-factor authentication (MFA) registration policy that has the following settings:
Assignments:
- Include: Group1
- Exclude: Group2
Access controls: Require Azure MFA registration
Enforce Policy: On
You create a conditional access policy that has the following settings:
Name: Policy1
Assignments:

- Include: Group2
- Exclude: Group1

Access controls:

- Grant, Require multi-factor authentication

Enable policy: On

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/identity-protection/howto-identity-protection-configure-mfa-policy

https://docs.microsoft.com/en-us/microsoft-365/admin/security-and-compliance/set-up-multi-factor-authentication?view=o365-worldwide

NEW QUESTION: 99

You need to meet the application requirement for App1.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. From the Azure Active Directory admin center, configure the application URL settings.

B. From the Azure Active Directory admin center, add an enterprise application.

C. On an on-premises server, download and install the Microsoft AAD Application Proxy connector.

D. On an on-premises server, install the Hybrid Configuration wizard.

E. From the Microsoft 365 admin center, configure the Software download settings.

Answer: A,B,C (LEAVE A REPLY)

An on-premises web application named App1 must allow users to complete their expense reports online.

Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.

In this question, we need to add an enterprise application in Azure and configure a Microsoft AAD Application Proxy connector to connect to the on-premises web application (App1).

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy#how-application-proxy-works

NEW QUESTION: 100

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Reader role.

From the Exchange admin center, you assign User2 the Help Desk role.

Does this meet the goal?

A. Yes

B. NO

Answer: B (LEAVE A REPLY)

User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Reader role can view reports but not schedule the email delivery of security and compliance reports.

The Help Desk role cannot schedule the email delivery of security and compliance reports.

Reference:

https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo

NEW QUESTION: 101

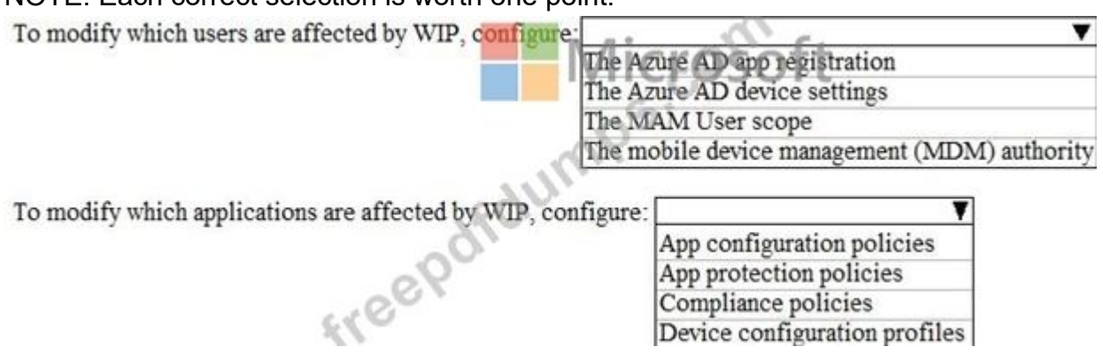
You have a Microsoft Azure Active Directory (Azure AD) tenant.

Your company implements Windows Information Protection (WIP).

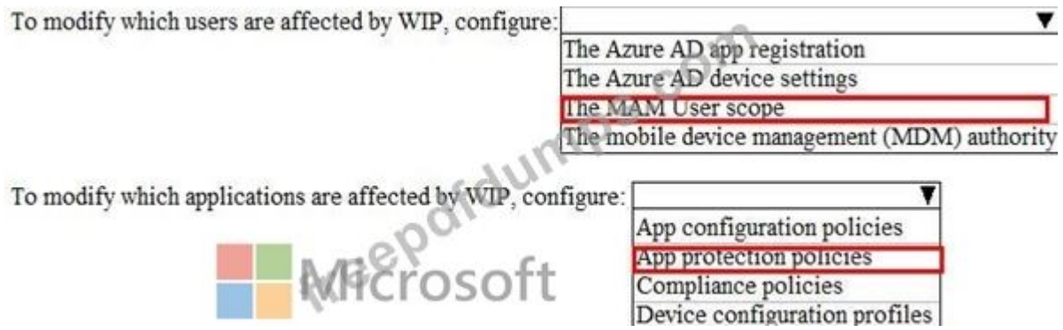
You need to modify which users and applications are affected by WIP.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

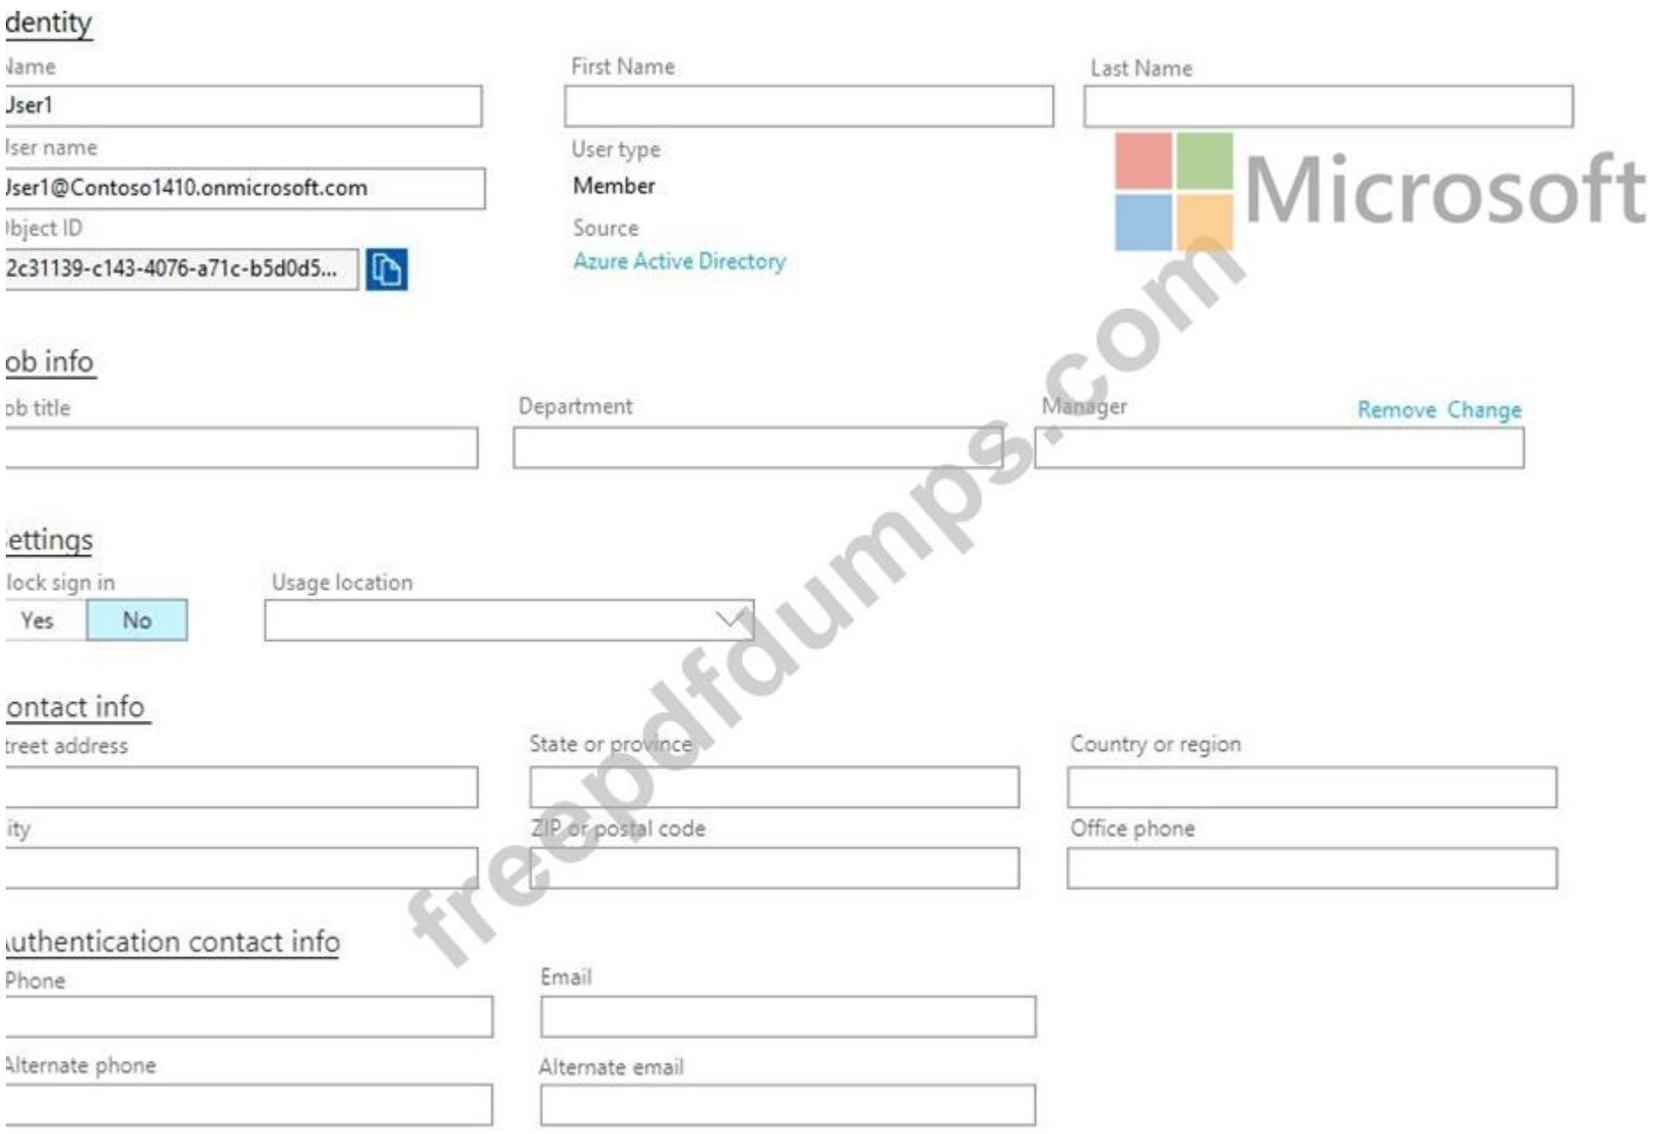


Answer:

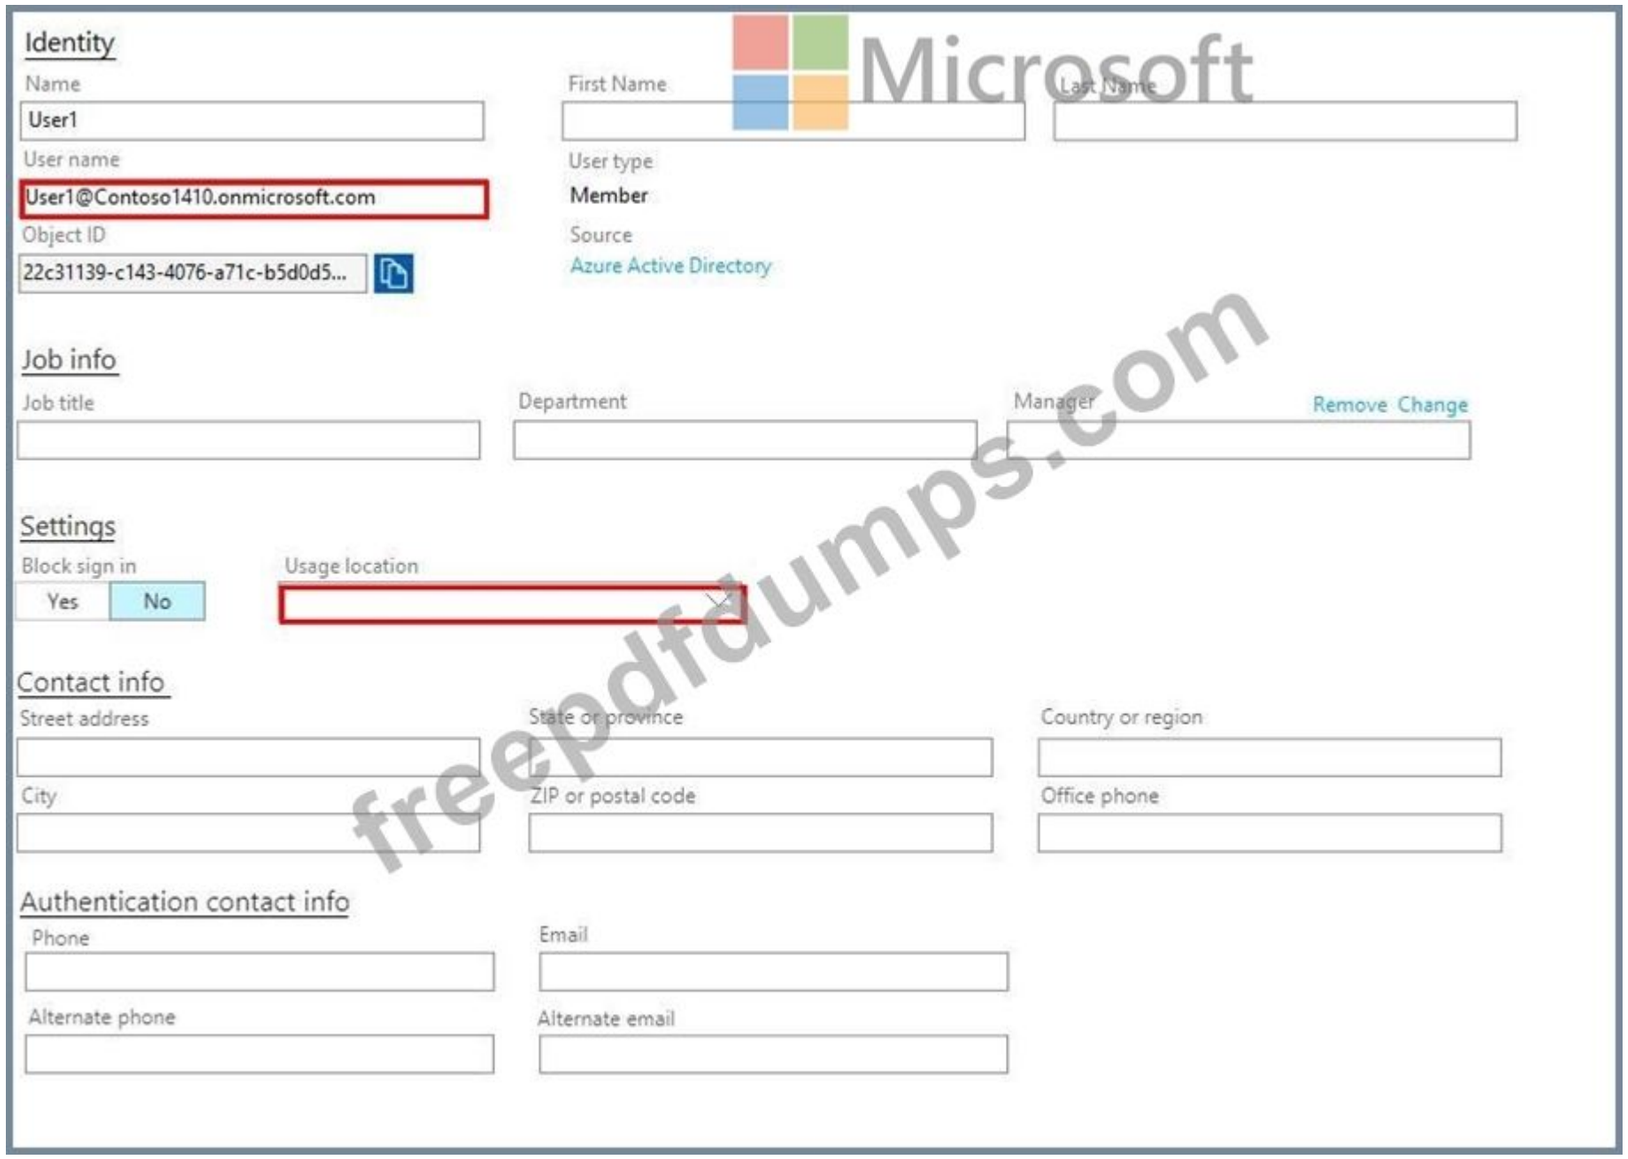


Reference:
https://docs.microsoft.com/en-us/windows/security/information-protection/windows-information-protection/create-wip-policy-using-intune-azure

NEW QUESTION: 102
You need to meet the technical requirements for the user licenses.
Which two properties should you configure for each user? To answer, select the appropriate properties in the answer area.
NOTE: Each correct selection is worth one point.



Answer:



NEW QUESTION: 103

Note This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Administrator role. From the Exchange admin center, you add User2 to the View-Only Management role.

Does this meet the goal?

A. Yes

B. NO

Answer: (SHOW ANSWER)

User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Administrator role can view reports but not schedule the email delivery of security and compliance reports.

The View-Only Organization Management role cannot schedule the email delivery of security and compliance reports.

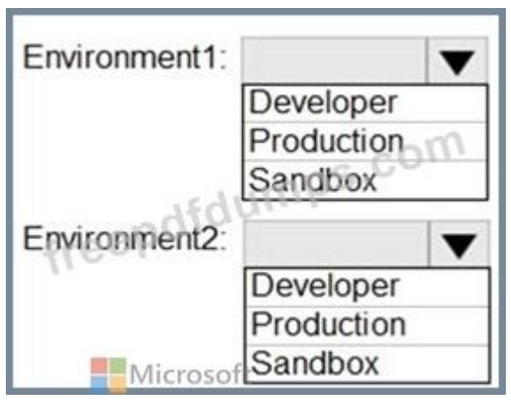
Reference:
https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo

NEW QUESTION: 104
You have a Microsoft 365 E5 subscription.
You need to ensure that users are prompted for multi-factor authentication (MFA) when they attempt to access Microsoft SharePoint Online resources. Users must NOT be prompted for MFA when they attempt to access other Microsoft 365 services.
What should you do?
A. From the Microsoft Endpoint Manager admin center, create an app protection policy.
B. From the multi-factor authentication page, configure the users settings.
C. From the Azure Active Directory admin center, create a conditional access policy.
D. From the Cloud App Security admin center, create an app access policy.
Answer: (SHOW ANSWER)
Multi-factor authentication (MFA) is configured through conditional access policies.
Reference:
https://docs.microsoft.com/en-us/appcenter/general/configuring-aad-conditional-access

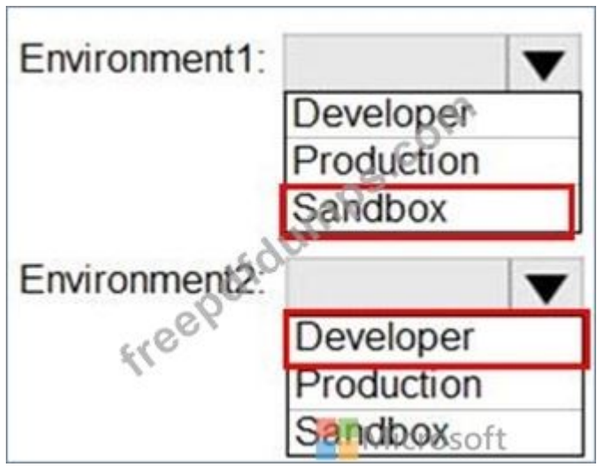
NEW QUESTION: 105
You plan to deploy two Microsoft Power Platform environments as shown in the following table.

Name	Requirement
Environment1	• Supports multiple makers that customize the environment • Supports copying other environments to Environment1 • Minimizes effort to reset the environment
Environment2	• Is a learning environment • Supports the creation of unlimited apps • Does not count against storage allocation for the tenant

Which environment type should you use for each environment? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/power-platform/admin/environments-overview

NEW QUESTION: 106
You have a Microsoft 365 tenant that contains a Microsoft Power Platform environment.
You need to ensure that only specific users can create new environments.
What should you do in the Power Platform admin center?
A. From Data policies, create a new data policy.
B. From Data integration, create a new connection set.
C. From Power Platform settings, modify the Governance settings for the environment.
D. From Environments, modify the behaviour settings for the default environment.
Answer: C (LEAVE A REPLY)
Reference:
https://docs.microsoft.com/en-us/power-platform/admin/control-environment-creation

NEW QUESTION: 107
You are building a Microsoft Office Add-in for Outlook that will use the Microsoft Graph REST API to retrieve a users documents from a Microsoft SharePoint Online site. What should the add-m provide to retrieve the documents on behalf of the user?
A. a single sign-on (SSO) token
B. a refresh token
C. an access token
D. an identity token
Answer: C (LEAVE A REPLY)

NEW QUESTION: 108

Your network contains an on-premises Active Directory domain. The domain contains the users shown in the following table.

Name	Country	Organizational unit (OU)
User1	United States	OU1
User2	Canada	OU1
User3	United States	OU2

You have a Microsoft 365 subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com. You configure Azure AD Connect to sync the on-premises domain to contoso.com as shown in the following exhibit.

Answer Area

Statements	Yes	No
User1 syncs to Azure AD.	○	○
User2 syncs to Azure AD.	○	○
User3 syncs to Azure AD.	○	○

Answer:

Statements	Yes	No
User1 syncs to Azure AD.	○	○
User2 syncs to Azure AD.	○	○
User3 syncs to Azure AD.	○	○

NEW QUESTION: 109

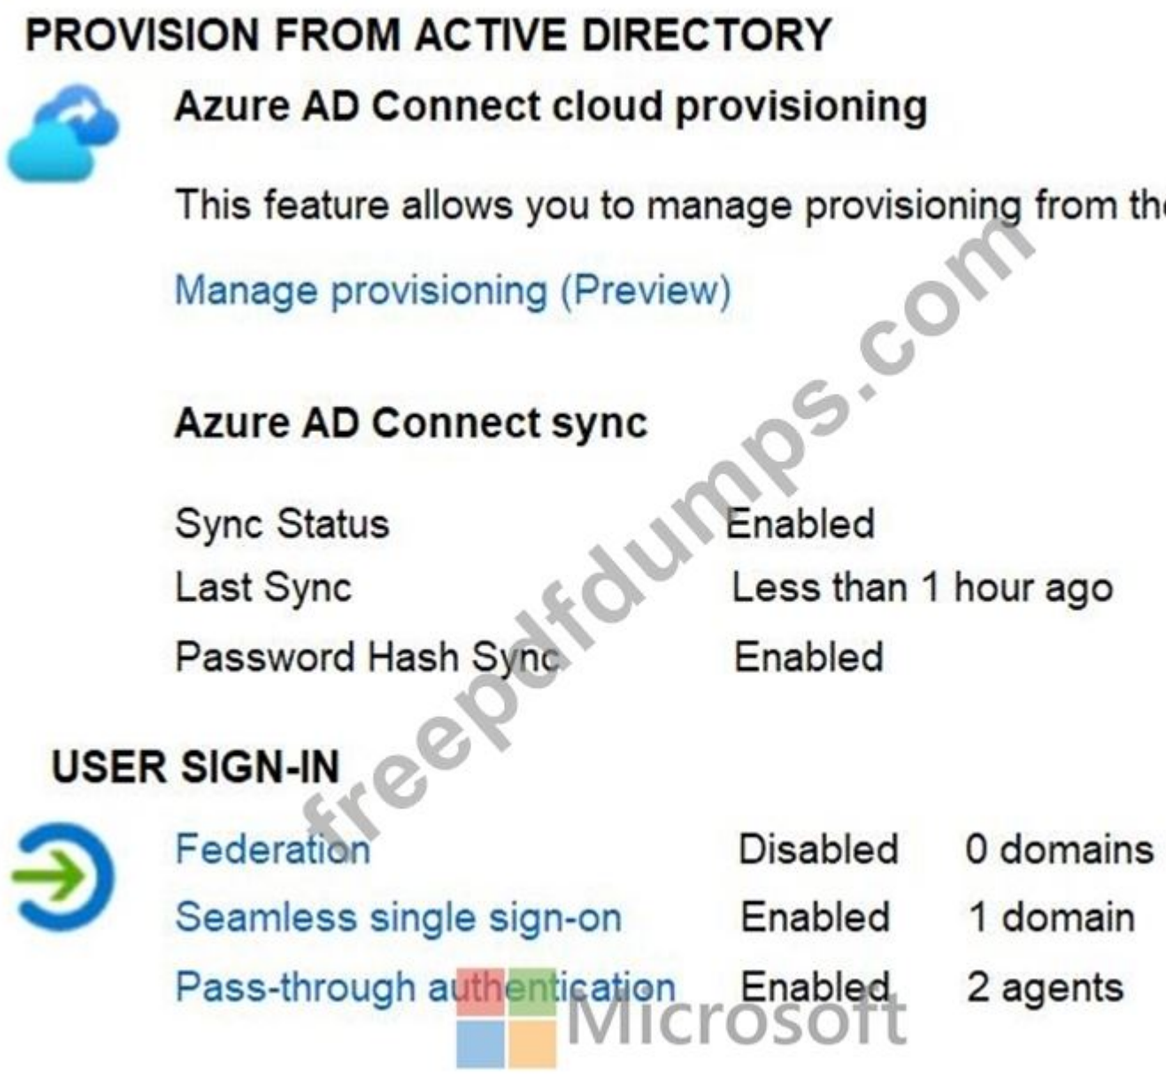
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)



User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com.
You need to ensure that User2 can access the resources in Azure AD.
Solution: From the Azure Active Directory admin center, you add fabrikam.com as a custom domain. You instruct User2 to sign in as user2@fabrikam.com.
Does this meet the goal?

A. Yes
B. No

Answer: A (LEAVE A REPLY)

The on-premises Active Directory domain is named contoso.com. To enable users to sign on using a different UPN (different domain), you need to add the domain to Microsoft 365 as a custom domain.

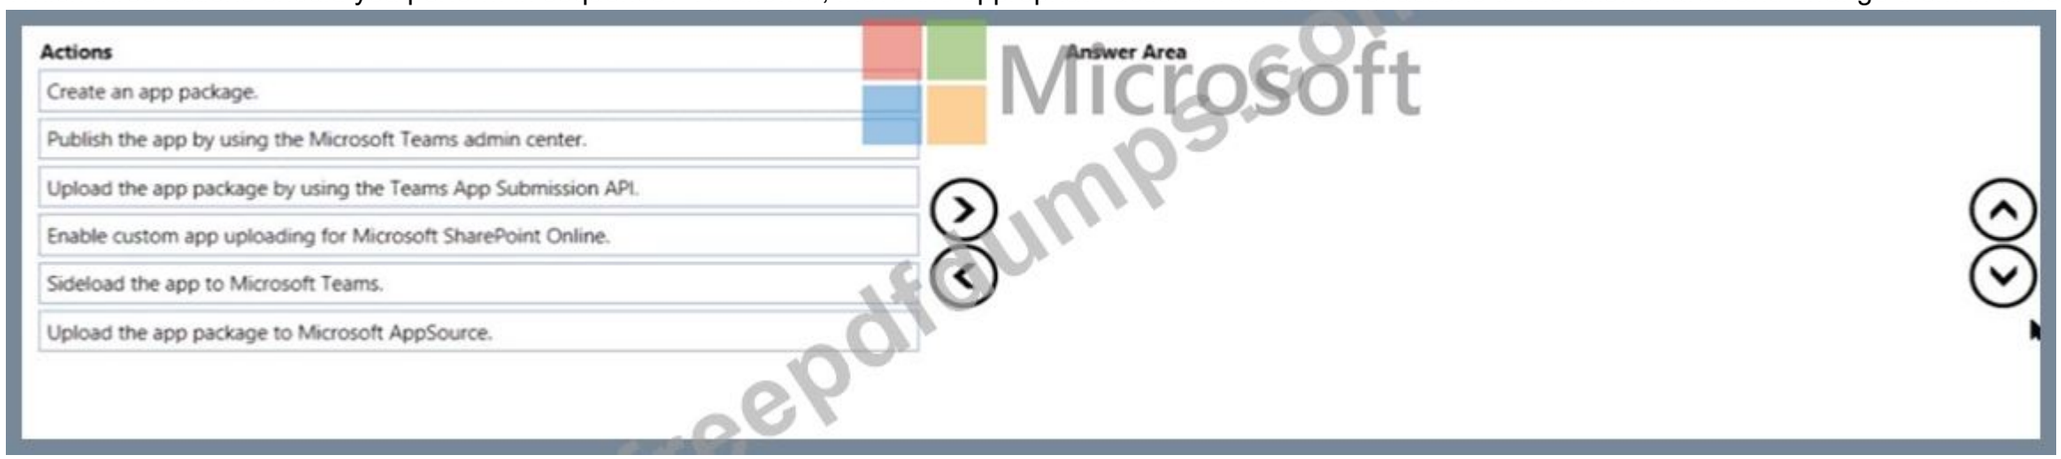
NEW QUESTION: 110

You have a Microsoft 365 subscription.

You build a Microsoft Teams app named App1.

You need to publish App1 to the app catalog.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:

1 - Create an app package.

2 - Sideload the app to Microsoft Teams.

3 - Publish the app by using the Microsoft Teams admin center.

NEW QUESTION: 111

Your company has a Microsoft Office 365 subscription that contains the groups shown in the following table.

Name	Members
Group1	User1, User2
Group2	User3

You have the licenses shown in the following table.

License	Included service	Assigned to
Microsoft 365	Microsoft Exchange Online	Group1
Microsoft 365	Microsoft SharePoint Online	User1, User2, User3

Another administrator removes User1 from Group1 and adds Group2 to Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

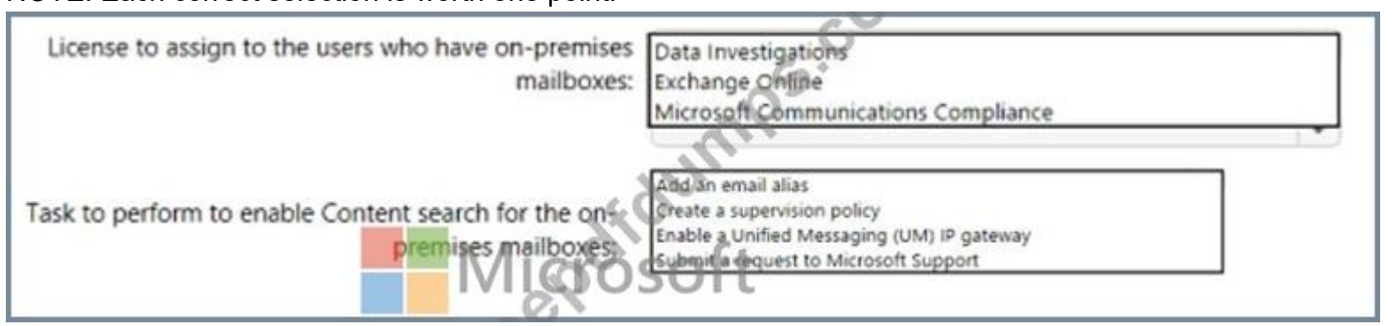
Statements	Yes	No
User1 is licensed for SharePoint Online.	○	○
User2 is licensed for SharePoint Online.	○	○
User3 is licensed for SharePoint Online.	○	○

Answer:

Statements	Yes	No
User1 is licensed for SharePoint Online.	○	○
User2 is licensed for SharePoint Online.	○	○
User3 is licensed for SharePoint Online.	○	○

Reference:
https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/active-directory-licensing-whatis-azure-portal

NEW QUESTION: 112
You have a Microsoft 365 E5 subscription and a hybrid deployment of Microsoft Exchange. The deployment contains TOO users who have on-premises mailboxes and 100 users who have mailboxes in Exchange Online.
You enable Microsoft Teams and assign a Microsoft Teams license to each user.
You need to ensure that the users who have on-premises mailboxes can use Microsoft Teams. All Microsoft Teams chat data must be searchable by using Content search in the Security fit Compliance admin center.
What should you do? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:

NEW QUESTION: 113
Your network contains an Active Directory forest. The forest contains two domains named contoso.com and adatum.com.
Your company recently purchased a Microsoft 365 subscription.
You deploy a federated identity solution to the environment.
You use the following command to configure contoso.com for federation.
Convert-MsolDomaintoFederated -DomainName contoso.com
In the Microsoft 365 tenant, an administrator adds and verifies the adatum.com domain name.
You need to configure the adatum.com Active Directory domain for federated authentication.
Which two actions should you perform before you run the Azure AD Connect wizard? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.
A. From Windows PowerShell, run the Convert-MsolDomaintoFederated
-DomainName contoso.com -SupportMultipleDomain command.
B. From Windows PowerShell, run the New-MsolFederatedDomain
-SupportMultipleDomain -DomainName contoso.com command.
C. From Windows PowerShell, run the New-MsolFederatedDomain
-DomainName adatum.com command.
D. From Windows PowerShell, run the Update-MSOLFederatedDomain
-DomainName contoso.com -SupportMultipleDomain command.
E. From the federation server, remove the Microsoft Office 365 relying party trust.
Answer: A,E (LEAVE A REPLY)
When the Convert-MsolDomaintoFederated -DomainName contoso.com command was run, a relying party trust was created.
Adding a second domain (adatum.com in this case) will only work if the SupportMultipleDomain switch was used when the initial federation was configured by running the Convert-MsolDomaintoFederated -DomainName contoso.com command.
Therefore, we need to start again by removing the relying party trust then running the Convert-MsolDomaintoFederated command again with the SupportMultipleDomain switch.

NEW QUESTION: 114
Your on-premises network contains an Active Directory domain.
You have a Microsoft 365 E5 subscription.
You plan to implement a hybrid configuration that has the following requirements:
* Minimizes the number of times users are prompted for credentials when they access Microsoft 365 resources
* Supports the use of Azure Active Directory (Azure AD) Identity Protection You need to configure Azure AD Connect to support the planned implementation. Which two options should you select? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.
A. Directory extensions attribute sync
B. Password writeback
C. Pass-through authentication
D. Enable single sign-on
Answer: (SHOW ANSWER)

NEW QUESTION: 115

Your company has a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.
An external vendor has a Microsoft account that has a username of user1@outlook.com.
You plan to provide user1@outlook.com with access to several resources in the subscription.
You need to add the external user account to contoso.onmicrosoft.com. The solution must ensure that the external vendor can authenticate by using user1@outlook.com.
What should you do?
A. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify -UserPrincipalName user1@outlook.com.
B. From the Microsoft 365 admin center, add a contact, and then specify user1@outlook.com as the email address.
C. From the Azure portal, add a new guest user, and then specify user1@outlook.com as the email address.
D. From the Azure portal, add a custom domain name, and then create a new Azure AD user and use user1@outlook.com as the username.
Answer: (SHOW ANSWER)
You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.
The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator

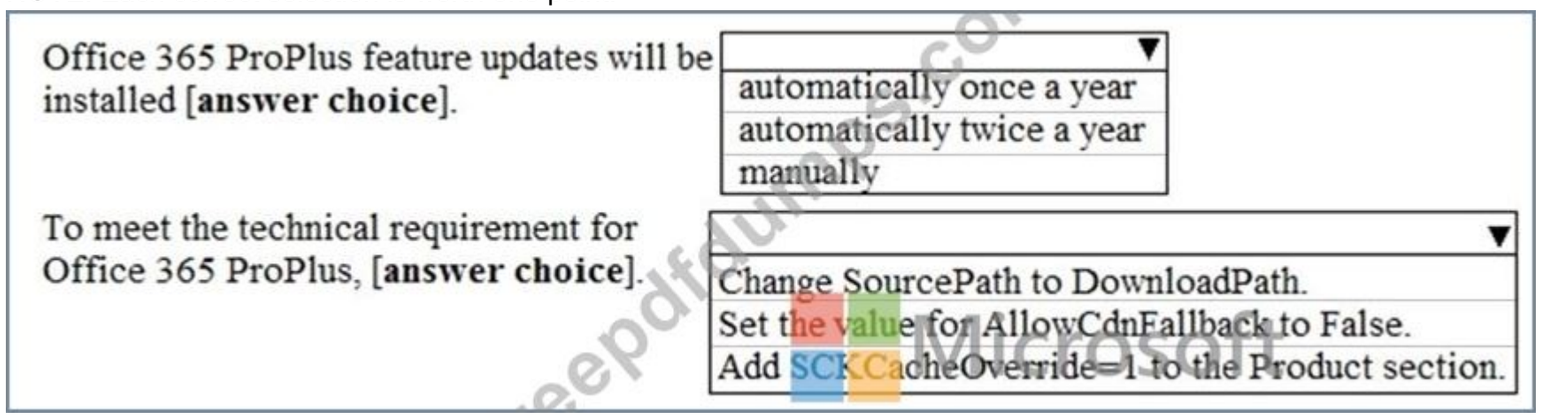
NEW QUESTION: 116
You use Microsoft System Center Configuration manager (Current Branch) to manage devices.
Your company uses the following types of devices:
Windows 10
Windows 8.1
Android
iOS
Which devices can be managed by using co-management?
A. Windows 10 and Windows 8.1 only
B. Windows 10, Android, and iOS only
C. Windows 10 only
D. Windows 10, Windows 8.1, Android, and iOS
Answer: C (LEAVE A REPLY)
You can manage only Windows 10 devices by using co-management.
When you concurrently manage Windows 10 devices with both Configuration Manager and Microsoft Intune, this configuration is called co-management. When you manage devices with Configuration Manager and enroll to a third-party MDM service, this configuration is called coexistence.
Reference:
https://docs.microsoft.com/en-us/configmgr/comanage/overview

NEW QUESTION: 117
You need to meet the application requirements for the Office 365 ProPlus applications.
You create an XML files that contains the following settings.

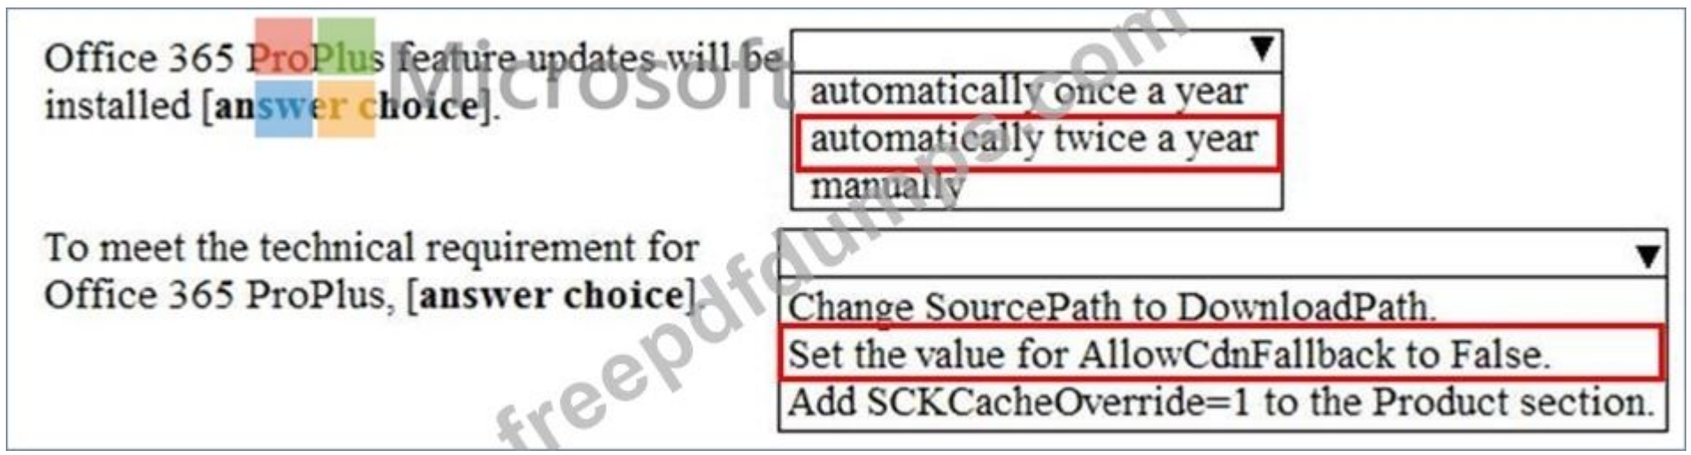
```
<Add SourcePath="\\Server1\OfficeSoftware"
     OfficeClientEdition="32"
     Channel="Targeted"
     AllowCdnFallback="True">
  <Product ID="O365ProPlusRetail">
     <Language ID="MatchOS" Fallback="en-us" />
  </Product>
</Add>
```

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.



Answer:



Reference:

https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool#updates-element

https://docs.microsoft.com/en-us/deployoffice/overview-of-update-channels-for-office-365-proplus

NEW QUESTION: 118

Your company has an on-premises Microsoft SharePoint Server environment and a Microsoft 365 subscription.

When users search for content from Microsoft 365, you plan to include content from the on-premises SharePoint Server environment in the results.

You need to add crawled metadata from the on-premises SharePoint Server content to the Microsoft Office 365 search index.

What should you do first?

A. Create a site collection that uses the Enterprise Search Center template.

B. Run the SharePoint Migration Tool.

C. Run the SharePoint Hybrid Configuration Wizard.

D. Create a site collection that uses the Basic Search Center template.

Answer: (SHOW ANSWER)

NEW QUESTION: 119

You have a Microsoft 365 subscription that uses a default domain named contoso.com. The domain contains the users shown in the following table.

Name	Member of
User1	Compliant
User2	Group1, Group2

The domain contains the devices shown in the following table.

Name	Compliance status
Device1	Compliant
Device2	Noncompliant

The domain contains conditional access policies that control access to a cloud app named App1. The policies are configured as shown in the following table.

Name	Includes	Excludes	Device state includes	Device state excludes	Grant
Policy1	Group1	*None*	All device states	Devices marked as compliant	Block access
Policy2	Group1	Group2	*None*	*None*	Block Access
Policy3	Group1	*None*	All device states	*None*	Grant access

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 can access App1 from Device1.	○	○
User2 can access App1 from Device1.	○	○
User2 can access App1 from Device2.	○	○

Answer:

Statements	Yes	No
User1 can access App1 from Device1.	○	○
User2 can access App1 from Device1.	○	○
User2 can access App1 from Device2.	○	○

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/plan-conditional-access

NEW QUESTION: 120

Your network contains the servers shown in the following table.

Server name	Software	Configuration
Server1	Windows Server 2008	Domain controller
Server2	Windows Server 2012	Domain controller
Server3	Microsoft Exchange Server 2007	*Not applicable*
Server4	Microsoft SharePoint Server 2010	*Not applicable*
Server5	Microsoft Lync Server 2013	*Not applicable*

You purchase Microsoft 365 Enterprise E5 and plan to move all workloads to Microsoft 365 by using a hybrid identity solution and a hybrid deployment for all workloads.

You need to identify which server must be upgraded before you move to Microsoft 365. What should you identify?

A. Server 2

B. Server 3

C. Server 5

D. Server 1

E. Server 4

Answer: (SHOW ANSWER)

Exchange Server 2007 is not supported for a hybrid deployment.

Reference:

https://docs.microsoft.com/en-us/exchange/hybrid-deployment-prerequisites

NEW QUESTION: 121

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.

Name	Type	Source
User1	User	Azure Active Directory (Azure AD)
User2	User	Windows Server Active Directory
Group1	Group	Cloud
Group2	Group	Windows Server Active Directory

Azure AD Connect has the following settings:

Password Hash Sync: Enabled

Password writeback: Enabled

Group writeback: Enabled

You need to add User2 to Group 2.

Solution: From Azure PowerShell, you run the Set-AzureADGroup cmdlet.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)
The Set-AzureADGroup cmdlet updates a group in Azure Active Directory (AD) but User2 and Group2 are objects in Windows Server AD.

NEW QUESTION: 122
You need to recommend a model for the expense claims solution. What should you recommend?
A. actionable messages via connectors that use an actionable message card
B. actionable messages via email that uses an adaptive card
C. actionable messages via connectors that use an adaptive card
D. actionable messages via email that uses an actionable message card
Answer: (SHOW ANSWER)
Sending actionable messages via email is supported. You use actionable message cards.
Scenario:
Create an email workflow solution for expense claims. Users will submit their expense claims and the system will email an approval request to their manager.
The expense claims solution must provide managers with claim information and the ability to manage the claim by using Microsoft Outlook, Outlook on the web, or Outlook for iOS and Android.
Reference:
https://docs.microsoft.com/en-us/outlook/actionable-messages/send-via-email

NEW QUESTION: 123
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.
You may now click next to proceed to the lab.
Lab information
Use the following login credentials as needed:

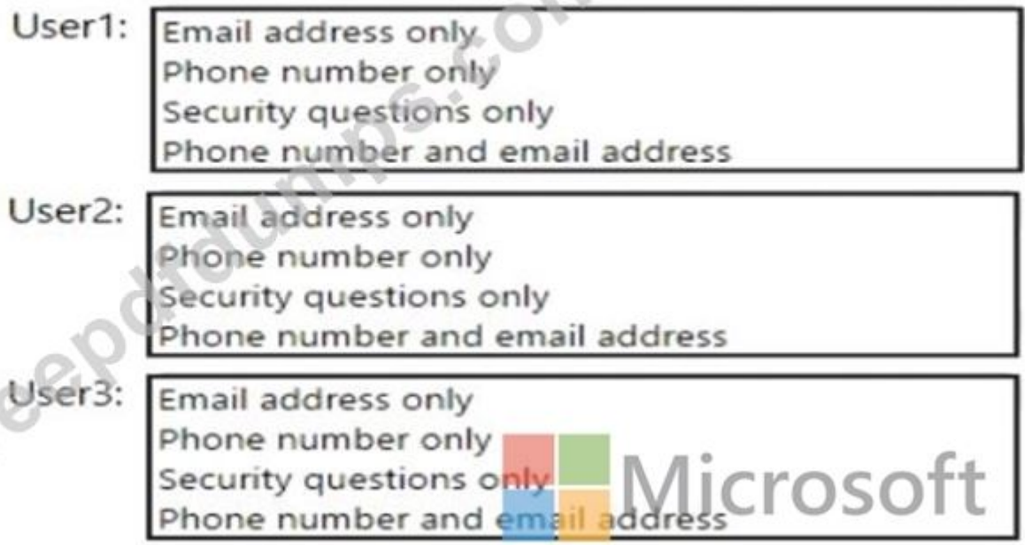
To enter your username, place your cursor in the Sign in box and click on the username below.
To enter your password, place your cursor in the Enter password box and click on the password below.
Microsoft 365 Username:
admin@LODSe426243.onmicrosoft.com
Microsoft 365 Password: 3&YWyjse-6-d
If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.
The following information is for technical support purposes only:
Lab Instance: 10887751
You plan to allow the users in your organization to invite external users as guest users to your Microsoft 365 tenant.
You need to prevent the organization's users from inviting guests who have an email address that uses a suffix of @gmail.com.
Answer:
You need to add gmail.com as a denied domain in the 'External collaboration settings'.
1. Go to the Azure Active Directory admin center.
2. Select Users then select 'User settings'.
3. Under External Users, select the 'Manage external collaboration settings'.
4. Under 'Collaboration restrictions', select the 'Deny invitations to the specified domains' option.
5. Under, Target Domains, type in the domain name 'gmail.com'
6. Click the Save button at the top of the screen to save your changes.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/b2b/allow-deny-list

NEW QUESTION: 124
You have a Microsoft Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.

Name	Role
User1	Global administrator
User2	Billing administrator
User3	None

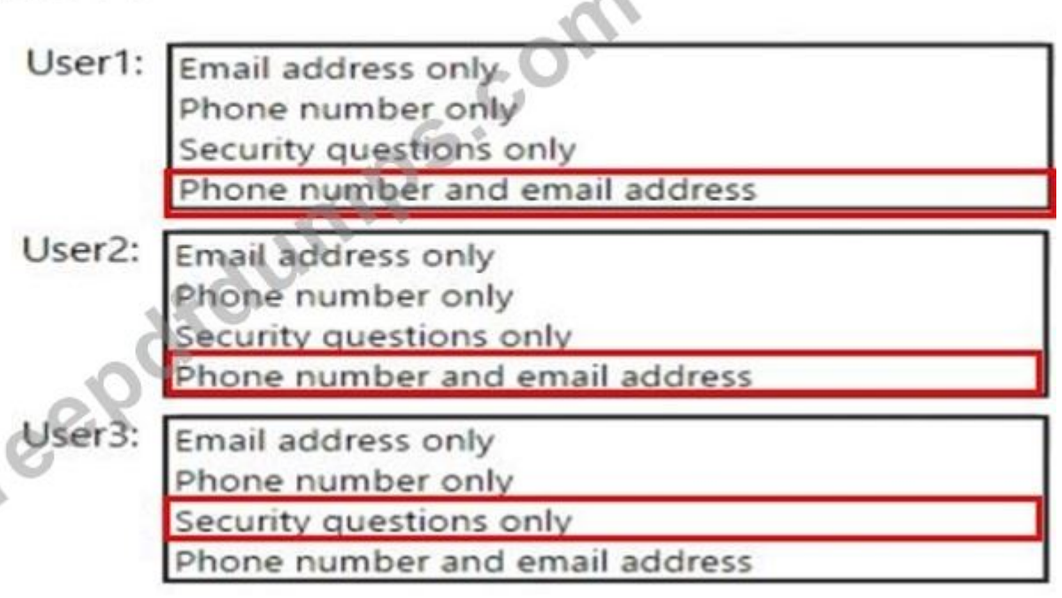
You enable self-service password reset for all users. You set Number of methods required to reset to 1, and you set Methods available to users to Security questions only.
What information must be configured for each user before the user can perform a self-service password reset? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area



Answer:

Answer Area



Reference:
https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-policy#administrator-password-policy-differences

NEW QUESTION: 125
Your company has an on-premises Microsoft Exchange Server 2013 organization.
The company has 100 users.
The company purchases Microsoft 365 and plans to move its entire.- infrastructure to the cloud.
The company does NOT plan to sync the on-premises Active Directory domain to Microsoft Azure Active Directory (Azure AD).

You need to recommend which type of migration to use to move all email messages, contacts, and calendar items to Exchange Online.
What should you recommend?
A. cutover migration
B. IMAP migration
C. remote move migration
D. staged migration
Answer: A (LEAVE A REPLY)
Reference:
https://docs.microsoft.com/en-us/exchange/mailbox-migration/cutover-migration-to-office-365 A cutover migration and an IMAP migration do not require the company to sync the on-premises Active Directory domain to Microsoft Azure Active Directory (Azure AD). Only a cutover migration meets the requirements in this question.
With a cutover migration, user accounts will need to be created in Azure Active Directory for each user. The mailboxes are all migrated in one go and MX records configured to redirect email to Microsoft 365.

NEW QUESTION: 126
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has 3,000 users. All the users are assigned Microsoft 365 E3 licenses.
Some users are assigned licenses for all Microsoft 365 services. Other users are assigned licenses for only certain Microsoft 365 services.
You need to determine whether a user named User1 is licensed for Exchange Online only.
Solution: You run the Get-MsolUser cmdlet.
Does this meet the goal?
A. Yes
B. No
Answer: (SHOW ANSWER)
The Get-MsolUser cmdlet will tell you if a user is licensed for Microsoft 365 but it does not tell you which licenses are assigned.
Reference:
https://docs.microsoft.com/en-us/powershell/module/msonline/get-msoluser?view=azureadps-1.0

NEW QUESTION: 127
Your company has a Microsoft 365 subscription that contains the users shown in the following table.

Name	Role
User1	Global administrator
User2	Security administrator, Guest inviter
User3	None
User4	Password administrator

You need to identify which users can perform the following administrative tasks:
Modify the password protection policy.
Create guest user accounts.
Which users should you identify for each task? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Modify the password protection policy:

- User1 only
- User1 and User2 only
- User1, User2, and User4 only
- User1, User2, User3, and User4

Create new guest users in Microsoft Azure Active Directory (Azure AD):

- User1 only
- User1 and User2 only
- User1, User2, and User4 only
- User1, User2, User3, and User4

Answer:

Modify the password protection policy: **User1 only**

Create new guest users in Microsoft Azure Active Directory (Azure AD): **User1 and User2 only**

Reference:
https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premises-operations

NEW QUESTION: 128
You have a hybrid deployment of Microsoft 365 that contains the users shown in the following table.
Azure AD Connect has the following settings:

Name	Source	Last sign in
User1	Azure Active Directory (Azure AD)	Yesterday
User2	Windows Server Active Directory	Two days ago
User3	Windows Server Active Directory	Never

* Password Hash Sync Enabled
* Pass-through authentication: Enabled
You need to identify which users will be able to authenticate by using Azure AD if connectivity between on-premises Active Directory and the internet is lost. Which users should you identify?
A. User 1 only
B. User1 and User2 only
C. none
D. User1, User2, and User3

Answer: (SHOW ANSWER)

NEW QUESTION: 129

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com.

You need to ensure that User2 can access the resources in Azure AD.

Solution: From the on-premises Active Directory domain, you set the UPN suffix for User2 to @contoso.com. You instruct User2 to sign in as user2@contoso.com.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)
The on-premises Active Directory domain is named contoso.com. You can enable users to sign on using a different UPN (different domain), by adding the domain to Microsoft 365 as a custom domain. Alternatively, you can configure the user account to use the existing domain (contoso.com).

NEW QUESTION: 130
Note: This question it part of a series of questions that present the same scenario. Cacti question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has a Microsoft Office 36S tenant.
You suspect that several Office 365 features were recently updated.
You need to view a last of the features that were recently updated in the tenant.
Solution: You use the View service requests option in the Microsoft 365 admin center.
Does this meet the goal?
A. Yes
B. NO
Answer: (SHOW ANSWER)
A service request is a support ticket. Therefore, the View service requests option in the Microsoft 365 admin center displays a list of support tickets. It does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.
To meet the goal, you need to use Message center in the Microsoft 365 admin center.
Reference:
https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide

NEW QUESTION: 131
You have a Microsoft 365 subscription that contains the users shown in the following table.

Name	Role
User1	Helpdesk admin
User2	Global Administrator
User3	None
User4	None
User5	None

The subscription contains the groups shown in the following table.

Name	Type	Members
Group1	Microsoft 365	User2, User3
Group2	Mail-enabled security	User1, Group3
Group3	Distribution list	User4, User5

You deploy an app as shown in the following exhibit

For each of the following statements, select Yes if the statement is true. Otherwise select No.

Statements	Yes	No
User1 can modify the app deployment.	○	○
User2 will receive the app.	○	○
User4 will receive the app.	○	○

Answer:

Statements	Yes	No
User1 can modify the app deployment.	○	●
User2 will receive the app.	●	○
User4 will receive the app.	○	●

NEW QUESTION: 132
Your network contains an on-premises Active Directory domain. The domain contains 2,000 computers that run Windows 10.
You purchase a Microsoft 365 subscription.
You implement password hash synchronization and Azure Active Directory (Azure AD) Seamless Single Sign-On (Seamless SSO).
You need to ensure that users can use Seamless SSO from the Windows 10 computers.
What should you do?
A. Create a conditional access policy in Azure AD.
B. Deploy an Azure AD Connect staging server.
C. Join the computers to Azure AD.
D. Modify the Intranet zone settings by using Group Policy
Answer: D (LEAVE A REPLY)
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sso-quick-start

NEW QUESTION: 133
Your Network contains an on-premises Active Directory domain named contoso.local. The domain contains five domain controllers.
Your company purchases Microsoft 365 and creates a Microsoft Anne Active Directory (Azure AD) tenant named .contoso.onmicrosoft.com.
You plan to implement pass- through authentication.
You need to prepare the environment for the planned implementation of pass-through authentication.
Which three actions should you perform? Each correct answer presents pan of the solution.
NOTE: Each correct selection is worth one point.
A. Modify the email address attribute for each user account.
B. From the Azure portal, add a custom domain name.
C. From Active Directory Domains and Trusts, add a UPN suffix.
D. Modify the User logon name for each user account.
E. From the Azure portal, configure an authentication method.
F. From a domain controller, install an authentication Agent.
Answer: B,C,F (LEAVE A REPLY)
To implement pass-through authentication, you need to install and configure Azure AD Connect.
The on-premise Active Directory domain is named contoso.local. Before you can configure Azure AD Connect, you need to purchase a routable domain, for example, contoso.com.
You then need to add the domain contoso.com to Microsoft as a custom domain name.
The user accounts in the Active Directory domain need to be configured to use the domain name contoso.com as a UPN suffix. You need to add contoso.com to the Active Directory first by using Active Directory Domains and Trusts to add contoso.com add a UPN suffix. You can then configure each account to use the new UPN suffix.
An Authentication Agent is required on a domain controller to perform the authentication when pass-through authentication is used. When the custom domain and user accounts are configured, you can install and configure Azure AD Connect. An Authentication Agent is installed when you select the pass-through authentication option in the Azure AD Connect configuration or you can install the Authentication Agent manually.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-pta-quick-start

NEW QUESTION: 134
Your network contains an on-premises Active Directory forest named contoso.com. The forest contains the following domains:
Contoso.com
East.contoso.com
The forest contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	East.contoso.com
User3	Fabrikam.com

The forest syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.

Statements	Yes	NO
User1 can authenticate to Azure AD by using a username of user1@contoso.com.	O	O
User2 can authenticate to Azure AD by using a username of user2@contoso.com.	O	O
User3 can authenticate to Azure AD by using a username of user3@contoso.com	O	O

Answer:

Statements	Yes	NO
User1 can authenticate to Azure AD by using a username of user1@contoso.com.	O	O
User2 can authenticate to Azure AD by using a username of user2@contoso.com.	O	O
User3 can authenticate to Azure AD by using a username of user3@contoso.com	O	O

NEW QUESTION: 135

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your company has a main office and three branch offices. All the branch offices connect to the main office by using a WAN link. The main office has a high-speed Internet connection. All the branch offices connect to the Internet by using the main office connections.
Users use Microsoft Outlook 2016 to connect to a Microsoft Exchange Server mailbox hosted in the main office.
The users report that when the WAN link in their office becomes unavailable, they cannot access their mailbox.
You create a Microsoft 365 subscription, and then migrate all the user data to Microsoft 365.
You need to ensure that all the users can continue to use Outlook to receive email messages if a WAN link fails.
Solution: You enable Cached Exchange Mode for all the Outlook profiles.
Does this meet the goal?
A. Yes
B. No
Answer: B (LEAVE A REPLY)

NEW QUESTION: 136
Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that includes the users shown in the following table.

Name	Usage location	Membership
User1	*Not applicable*	Group1
User2	United States	Group2
User3	United States	*Not applicable*

Group2 is a member of Group1.
You assign a Microsoft Office 365 Enterprise E3 license to User2 as shown in the following exhibit.

You assign Office 365 Enterprise E3 licenses to Group1 as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User1 is licensed to use Microsoft Exchange Online.	○	○
User1 is licensed to use Microsoft Exchange Online and Microsoft Share Point Online.	○	○
If you add User3 to Group2, the user will be licensed to use Microsoft Exchange Online.	○	○

Answer:

Statements	Yes	No
User1 is licensed to use Microsoft Exchange Online.	○	○
User1 is licensed to use Microsoft Exchange Online and Microsoft Share Point Online.	○	○
If you add User3 to Group2, the user will be licensed to use Microsoft Exchange Online.	○	○

Reference:
https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-group-advanced

NEW QUESTION: 137
You have a Microsoft 365 E5 subscription.
You have an Azure AD tenant named contoso.com that contains the following users:
* Admin 1
* Admin2
* User1
Contoso.com contains an administrative unit named AU1 that has no role assignments. User1 is a member of AU1.

Answer Area

Statements	Yes	No
You can add Admin1 as a member of AU1.	○	○
You can add User1 as a member of AU2.	○	○
You can assign Admin2 the User administrator role for AU1.	○	○

Answer:

Answer Area

Statements	Yes	No
You can add Admin1 as a member of AU1.	○	○
You can add User1 as a member of AU2.	○	○
You can assign Admin2 the User administrator role for AU1.	○	○

NEW QUESTION: 138

You are developing a Microsoft Teams tab that will capture coordinates from mobile devices and send notifications to users.

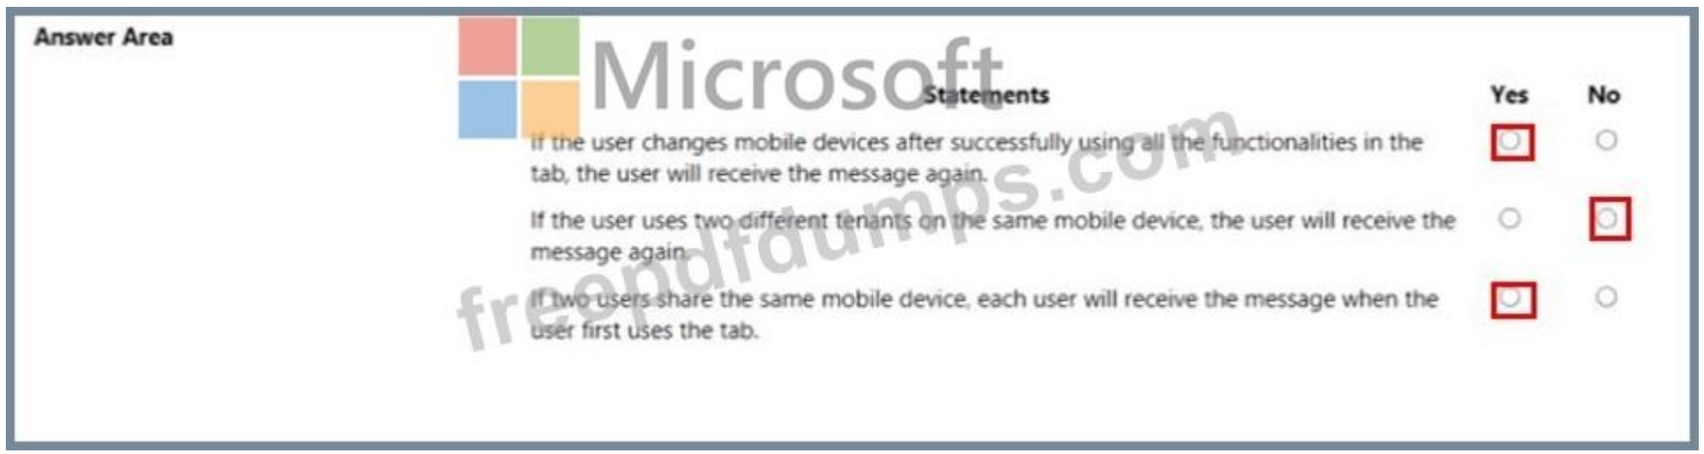
The relevant portion of the app manifest is shown in the App Manifest exhibit (Click the App Manifest tab.) The relevant portion of the JavaScript code for the tab is shown in the JavaScript exhibit (Click the JavaScript tab) While testing the tab. a user receives the message shown in the Message exhibit (Click the Message tab.) For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE; Each correct selection is worth one point.

Answer Area

Statements	Yes	No
If the user changes mobile devices after successfully using all the functionalities in the tab, the user will receive the message again.	○	○
If the user uses two different tenants on the same mobile device, the user will receive the message again.	○	○
If two users share the same mobile device, each user will receive the message when the user first uses the tab.	○	○

Answer:



NEW QUESTION: 139

You need to meet the security requirement for the vendors.

What should you do?

A. From the Azure portal, modify the authentication methods.

B. From Azure Cloud Shell, run the New-AzureADMSInvitation and specify the -InvitedIserEmailAddress cmdlet.

C. From Azure Cloud Shell, run the Set-MsolUserPrincipalName and specify the -tenantID parameter.

D. From the Azure portal, add an identity provider.

Answer: B (LEAVE A REPLY)

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the vendors already have Microsoft accounts so they can authenticate using them.

In this solution, we are creating guest account invitations by using the New-AzureADMSInvitation cmdlet and specifying the -InvitedUserEmailAddress parameter.

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator

https://docs.microsoft.com/en-us/powershell/module/azuread/new-azureadmsinvitation?view=azureadps-2.0 This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.

Overview

Fabrikam, Inc. is an electronics company that produces consumer products. Fabrikam has 10,000 employees worldwide.

Fabrikam has a main office in London and branch offices in major cities in Europe, Asia, and the United States.

NEW QUESTION: 140
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).
You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).
You configure a pilot for co-management.
You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.
You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager.
Solution: You create a device configuration profile from the Intune admin center.
Does this meet the goal?
A. Yes
B. No
Answer: (SHOW ANSWER)
Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration Manager.
To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection. You do not need to create a device configuration profile from the Intune admin center. Therefore, this solution does not meet the requirements.

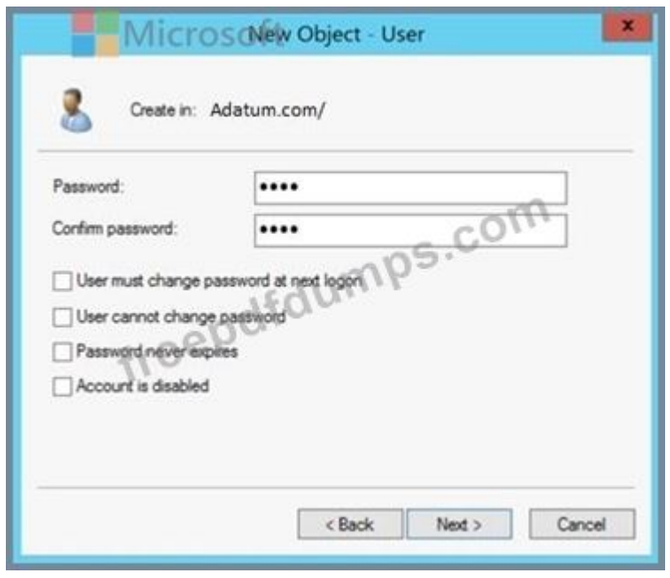
https://docs.microsoft.com/en-us/configmgr/comanage/how-to-enable

NEW QUESTION: 141
Your network contains an on-premises Active Directory domain named adatum.com that syncs to Azure Active Directory (Azure AD) by using the Azure AD Connect Express Settings.
Password writeback is disabled.
You create a user named User1 and enter Pass in the Password field as shown in the following exhibit.



The Azure AD password policy is configured as shown in the following exhibit.

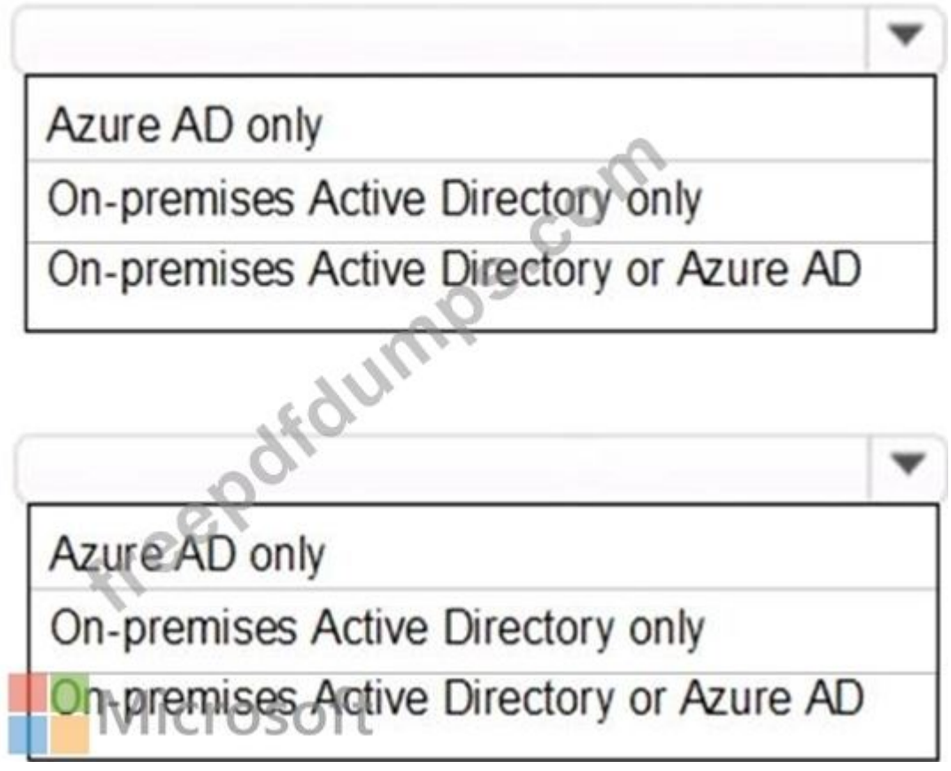
Statements	Yes	No
User1 can sign in to Azure AD.	○	○
User1 can change the password immediately by using the My Apps portal.	○	○
From Azure AD, User1 must change the password every 90 days.	○	○

Answer:

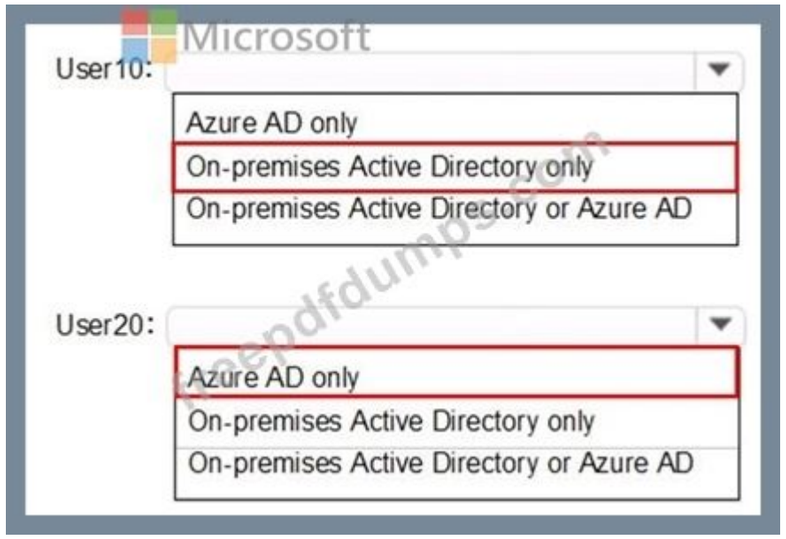
Statements	Yes	No
User1 can sign in to Azure AD.	○	○
User1 can change the password immediately by using the My Apps portal.	○	○
From Azure AD, User1 must change the password every 90 days.	○	○

Reference:
https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-express

NEW QUESTION: 142
Your network contains an on-premises Active Directory domain named Contoso.com.
Your company purchases a Microsoft 365 subscription and establishes a hybrid deployment of Azure Directory (Azure AD) by using password hash synchronization.
You create a new user User10 on-premises and a new user named User20 in Azure AD.
You need to identify where an administrator can reset the password of each new user.
What should you identify? To answer select the appropriate option in the answer area.
NOTE: Each correct selection is worth one point.



Answer:



NEW QUESTION: 143

Your company uses Gmail as a corporate email solution.

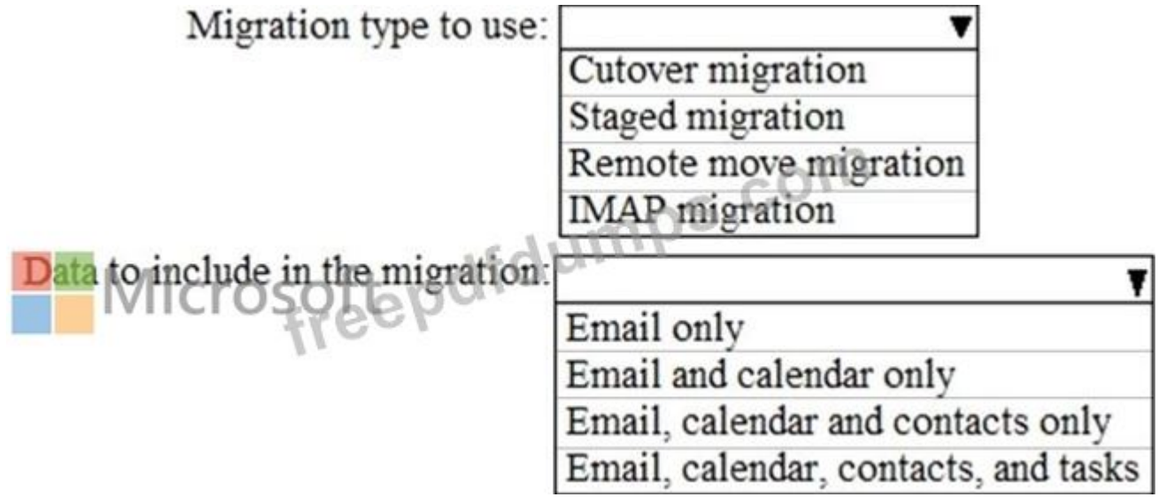
You purchase a Microsoft 365 subscription and plan to move all email data to Microsoft Exchange Online.

You plan to perform the migration by using the Exchange admin center.

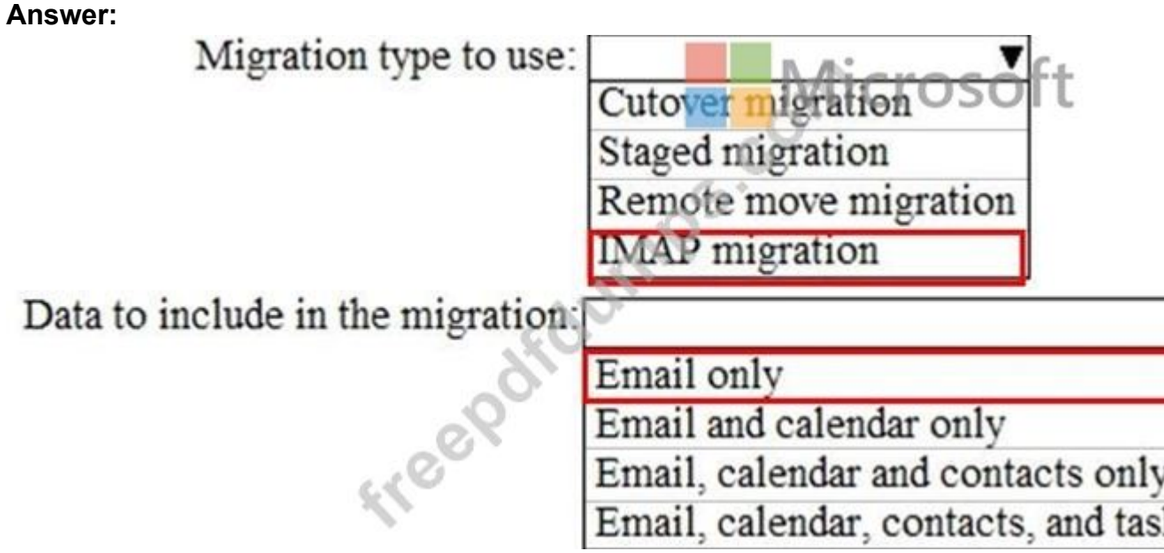
You need to recommend which type of migration to use and which type of data to migrate.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/exchange/mailbox-migration/migrating-imap-mailboxes/migrate-g-suite-mailboxes

NEW QUESTION: 144
You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.
An external user has a Microsoft account that uses an email address of user1@outlook.com.
An administrator named Admin1 attempts to create a user account for the external user and receives the error message shown in the following exhibit.

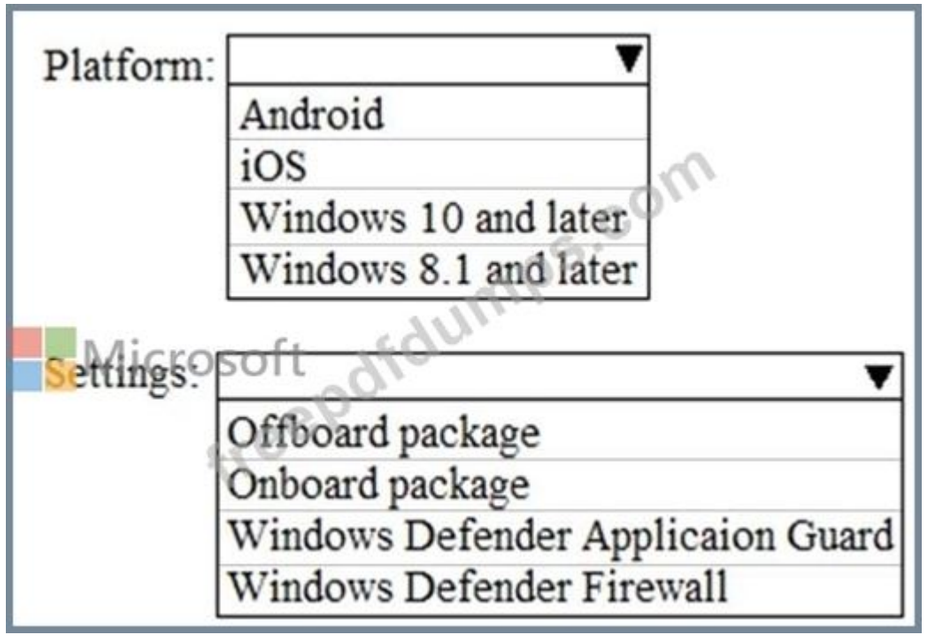
You need to ensure that Admin1 can add the user.
What should you do from the Azure Active Directory admin center?
A. Add a custom domain name named outlook.com.

B. Modify the Authentication methods.
C. Modify the External collaboration settings.
D. Assign Admin1 the Security administrator role.
Answer: (SHOW ANSWER)
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations

NEW QUESTION: 145
Your company recently purchased a Microsoft 365 subscription.
You enable Microsft Azure Multi-Factor Authentication (MFA) for all 500 users in the Azure Active Directory (Azure tenant) You need to generate a report that lists all the users who Azure registeration process.
What is the best approach to achieve the goal? More than one answer choice achieve the goal. Select the Best answer.
A. From Azure Cloud Shell, run the Get-AzureADUser cndlet.
B. From the Azure Active Directory admin center, use the Risky sign-ins blade.
C. From Azure Cloud Shell, run the Get-Msoluser cndlet.
D. From the Azure Active Directory admin center, use the Multi-factor Authentication - Server Status blade.
Answer: C (LEAVE A REPLY)

NEW QUESTION: 146
You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1 You enable Azure AD Identity Protection.
You need to ensure that User1 can review the list in Azure AD Identity Protection of users nagged for risk. The solution must use the principle of least privilege.
To which role should you add User1?
A. Security reader
B. Compliance administrator
C. Reports reader
D. Global administrator
Answer: A (LEAVE A REPLY)
The risky sign-ins reports are available to users in the following roles:
Security Administrator
Global Administrator
Security Reader
Of the three roles listed above, the Security Reader role has the least privilege.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-risky-sign-ins

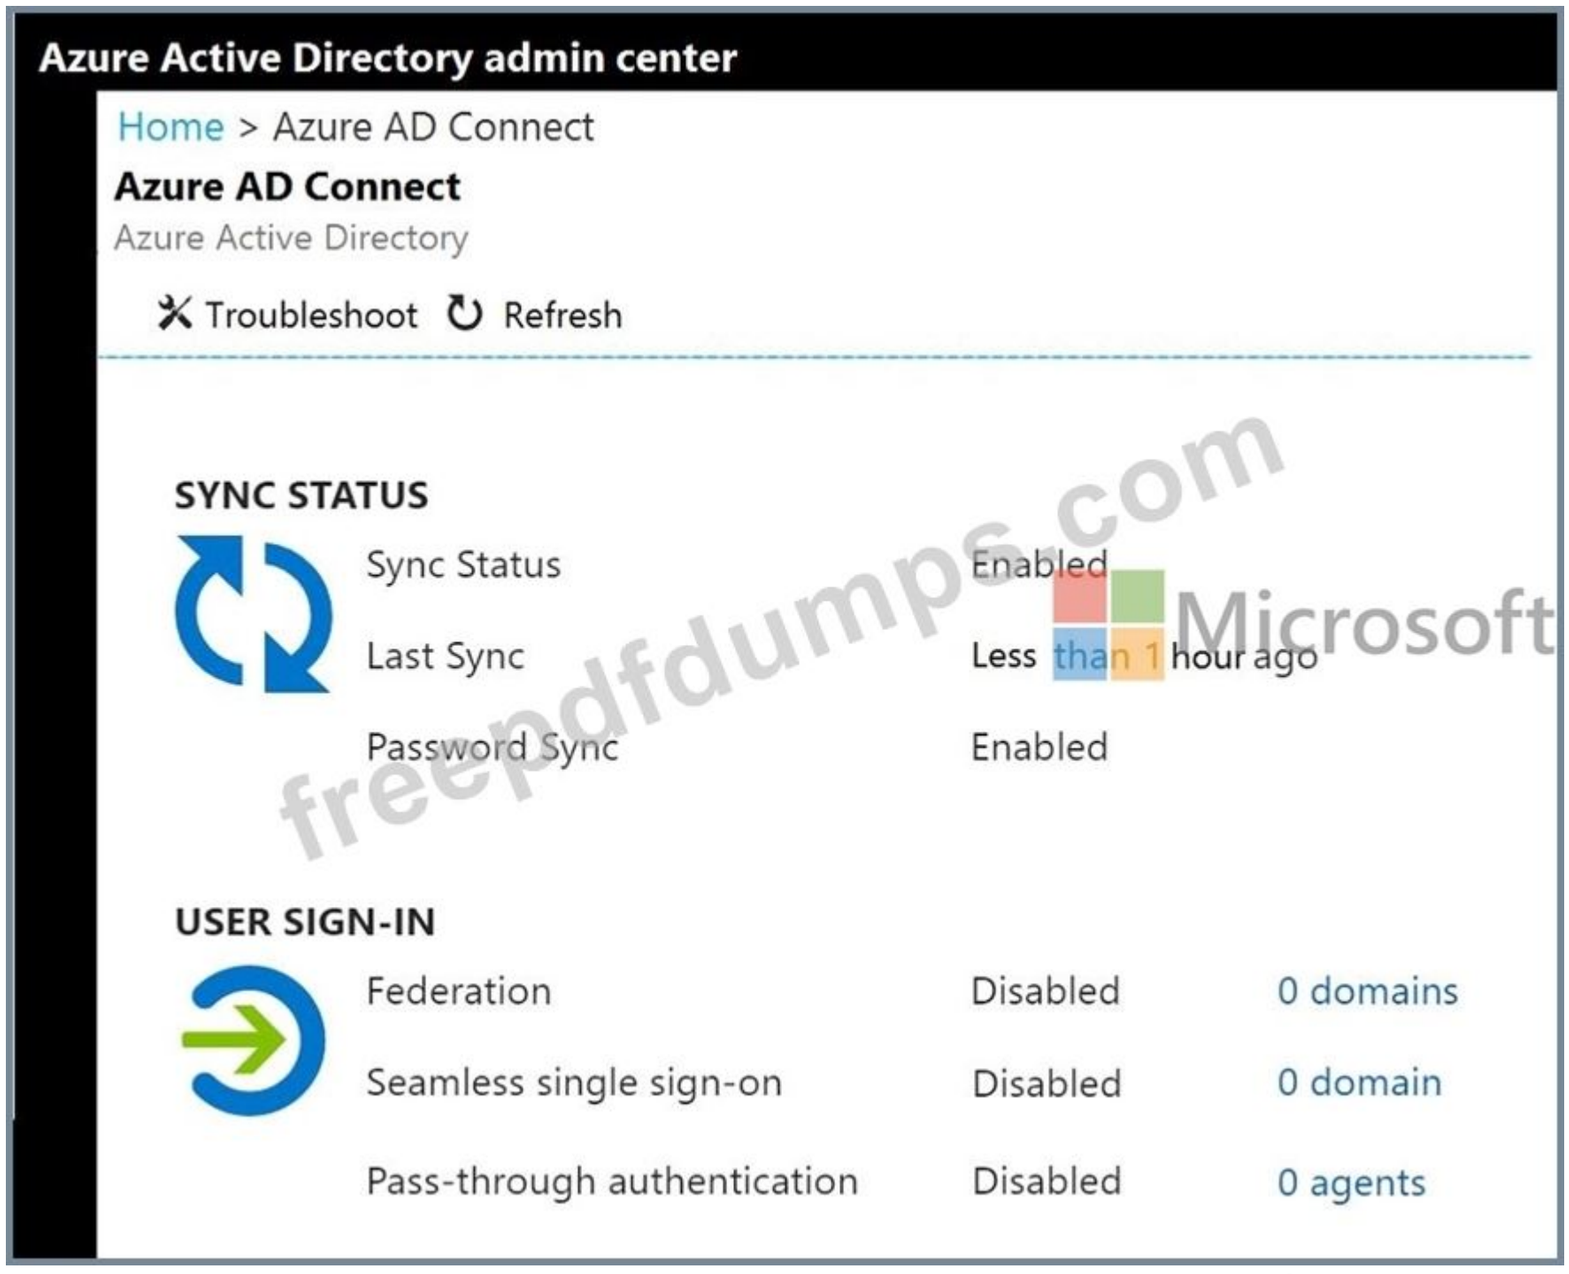
NEW QUESTION: 147
You have a Microsoft 365 subscription.
You need to implement Windows Defender Advanced Threat Protection (ATP) for all the supported devices enrolled devices enrolled on mobile device management (MDM).
What should you include in the device configuration profile? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:

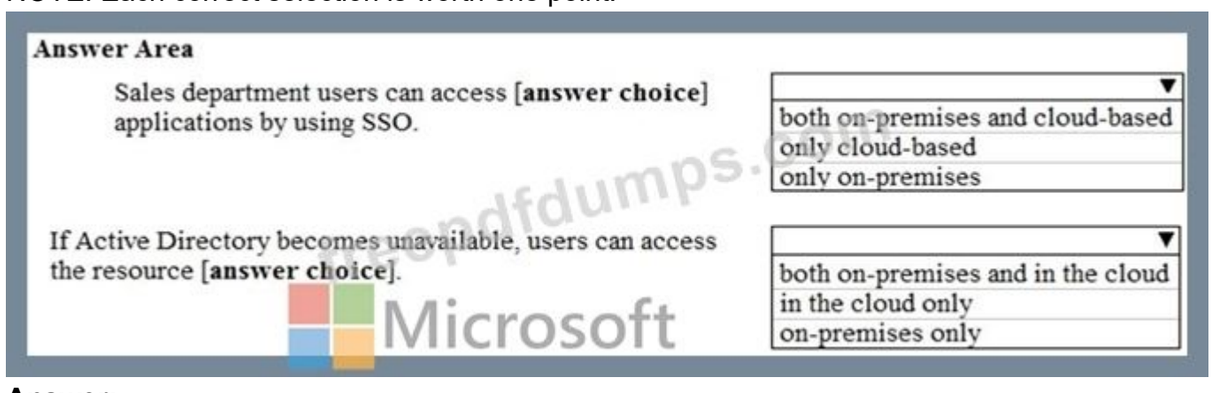
Reference:
https://docs.microsoft.com/en-us/intune/advanced-threat-protection

NEW QUESTION: 148
You create the Microsoft 365 tenant.
You implement Azure AD Connect as shown in the following exhibit.

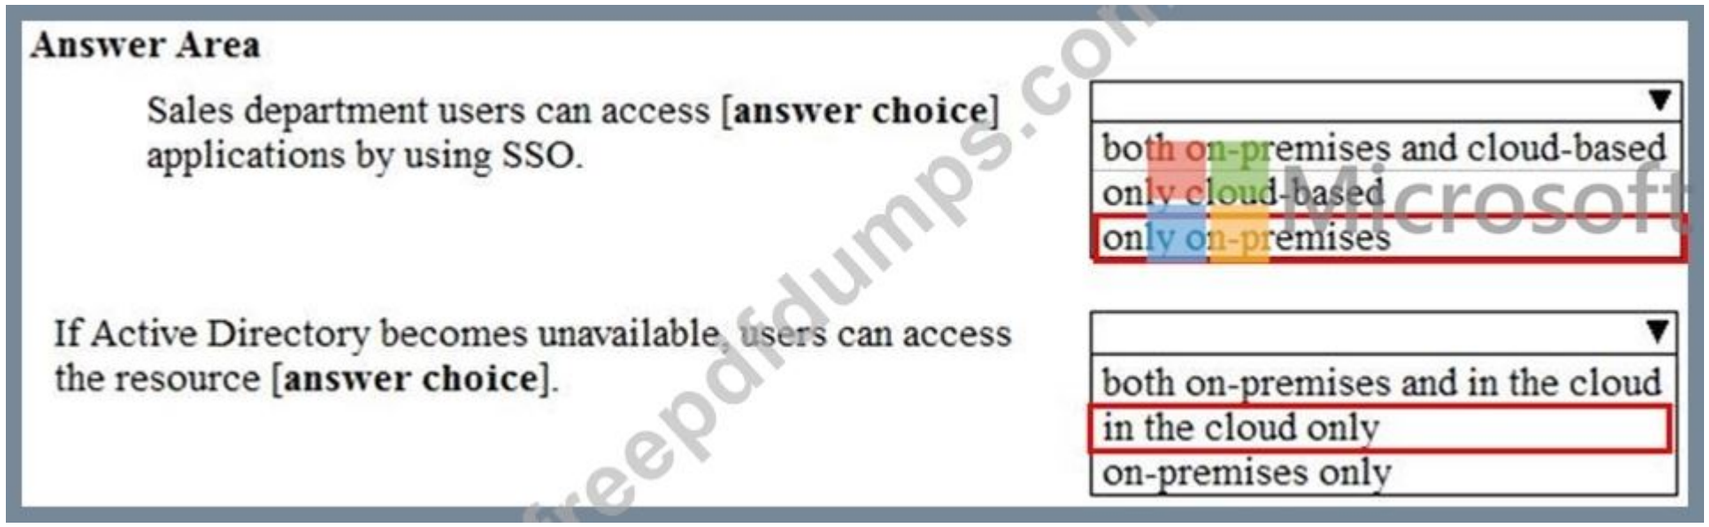


Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.



Answer:



NEW QUESTION: 149

You recently migrated your on-premises email solution to Microsoft Exchange Online and are evaluating which licenses to purchase.

You want the members of two groups named IT and Managers to be able to use the features shown in the following table.

Feature	Available to
Microsoft Azure Active Directory (Azure AD) conditional access	IT group, Managers group
Microsoft Azure Active Directory (Azure AD) Privileged Identity Management	IT group

The IT group contains 50 users. The Managers group contains 200 users.

You need to recommend which licenses must be purchased for the planned solution. The solution must minimize licensing costs.

Which licenses should you recommend?

A. 250 Microsoft 365 E3 only

B. 50 Microsoft 365 E 3 and 200 Microsoft 365 E5

C. 250 Microsoft 365 E5 only

D. 200 Microsoft 365 E3 and 50 Microsoft 365 E5

Answer: D (LEAVE A REPLY)

Microsoft Azure Active Directory Privileged Identity Management requires an Azure AD Premium P2 license. This license comes as part of the Microsoft 365 E5 license. Therefore, we need 50 Microsoft 365 E5 licenses for the IT group.

Conditional Access requires the Azure AD Premium P1 license. This comes as part of the Microsoft E3 license. Therefore, we need 200 Microsoft 365 E3 licenses for the Managers group.

Reference:

https://docs.microsoft.com/en-us/azure/active-directory/privileged-identity-management/subscription-requirements

NEW QUESTION: 150

You need to Add the custom domain name* to Office 36S K> support the planned changes as quickly as possible.

What should you create to verify the domain names successfully?

A. three alias (CNAME) record

B. one text (TXT) record

C. one alias (CNAME) record
D. three text (TXT) record
Answer: D (LEAVE A REPLY)
Contoso plans to provide email addresses for all the users in the following domains:
East.adatum.com
Contoso.adatum.com
Humongousinsurance.com
To verify three domain names, you need to add three TXT records.
Reference:
https://docs.microsoft.com/en-us/office365/admin/setup/add-domain?view=o365-worldwide

NEW QUESTION: 151
You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.
You add an app named App1 to the enterprise applications in contoso.com.
You need to configure self-service for App1.
What should you do first?
A. Assign App1 to users and groups.
B. Add an owner to App1.
C. Configure the provisioning mode for App1.
D. Configure an SSO method for App1.
Answer: (SHOW ANSWER)
The provisioning mode (manual or automatic) needs to be configured for an app before you can enable self-service application access.
Reference:
https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/manage-self-service-access

NEW QUESTION: 152
You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains the Windows 10 devices shown in the following table.

Name	Version	Language
Device1	x86	German
Device2	x64	English
Device3	x64	French

All the devices are managed by using Microsoft Endpoint Manager and are members of a group named Group1.

From the Microsoft Endpoint Manager admin center, you create an app suite named App1 for Microsoft Office 365 apps.
You configure the App1 settings as shown in the exhibit. (Click the Exhibit tab.)

You assign App1 to Group1.
For each of the following statements, select Yes if the statement is true. Otherwise, select No.
Note: Each correct selection is worth one point.

Statements	Yes	No
On Device1, Office 365 ProPlus will be installed and the display language will be German.	○	○
On Device2, Office 365 ProPlus will be installed and both the German and English display languages will be installed.	○	○
On Device3, Office 365 ProPlus will be installed and both the German and French display languages will be installed.	○	○

Answer:

Statements	Yes	No
On Device1, Office 365 ProPlus will be installed and the display language will be German.	○	◉
On Device2, Office 365 ProPlus will be installed and both the German and English display languages will be installed.	◉	○
On Device3, Office 365 ProPlus will be installed and both the German and French display languages will be installed.	◉	○

https://docs.microsoft.com/en-us/mem/intune/apps/apps-add-office365

NEW QUESTION: 153
Your network contains an on-premises Active Directory domain named contoso.com that is synced to a Microsoft Azure Active Directory (Azure AD) tenant.
The on-premises network contains a file server named Server1. Server1 has a share named Share1 that contains company documents.
Your company purchases a Microsoft 365 subscription.
You plan to migrate data from Share1 to Microsoft 365. Only data that was created or modified during the last three months will be migrated.
You need to identify all the files in Share1 that were modified or created during the last 90 days.
What should you use?
A. Server Manager
B. Microsoft SharePoint Migration Tool
C. Resource Monitor
D. Usage reports from the Microsoft 365 admin center
Answer: (SHOW ANSWER)
You can use the Microsoft SharePoint Migration Tool to migrate files from a file server to SharePoint Online.

The Microsoft SharePoint Migration Tool has a number of filters you can use to define which files will be migrated. One filter setting is "Migrate files modified after". This setting will only migrate files modified after the selected date.
The first phase of a migration is to perform a scan of the source files to create a manifest of the files that will be migrated. You can use this manifest to identify all the files in Share1 that were modified or created during the last 90 days.
Reference:
https://docs.microsoft.com/en-us/sharepointmigration/spmt-settings

NEW QUESTION: 154
Your network contains two disconnected on-premises Active Directory forests named adatum.com and contoso.com.
You have an Azure AD tenant named nwtraders.com
You need to sync the on-premises forests to nwtraders.com. The solution must meet the following requirements:
* Provide the ability to connect to adatum.com and contoso.com.
* Provide support for Microsoft Exchange hybrid.
* Provide the ability to sync device objects.
* Minimize administrative effort.

Answer:

NEW QUESTION: 155
You need to assign User2 the required roles to meet the security requirements and the technical requirements.
To which two roles should you assign User2? Each correct answer presents part of the solution.
NOTE: Each correct selection is worth one point.
A. the Exchange View-only Organization Management role
B. the Microsoft 365 Records Management role
C. the Exchange Online Help Desk role
D. the Microsoft 365 Security Reader role
E. the Exchange Online Compliance Management role
Answer: (SHOW ANSWER)

User2 must be able to view reports and schedule the email delivery of security and compliance reports.
The Security Reader role can view reports but not schedule the email delivery of security and compliance reports.
The Exchange Online Compliance Management role can schedule the email delivery of security and compliance reports.

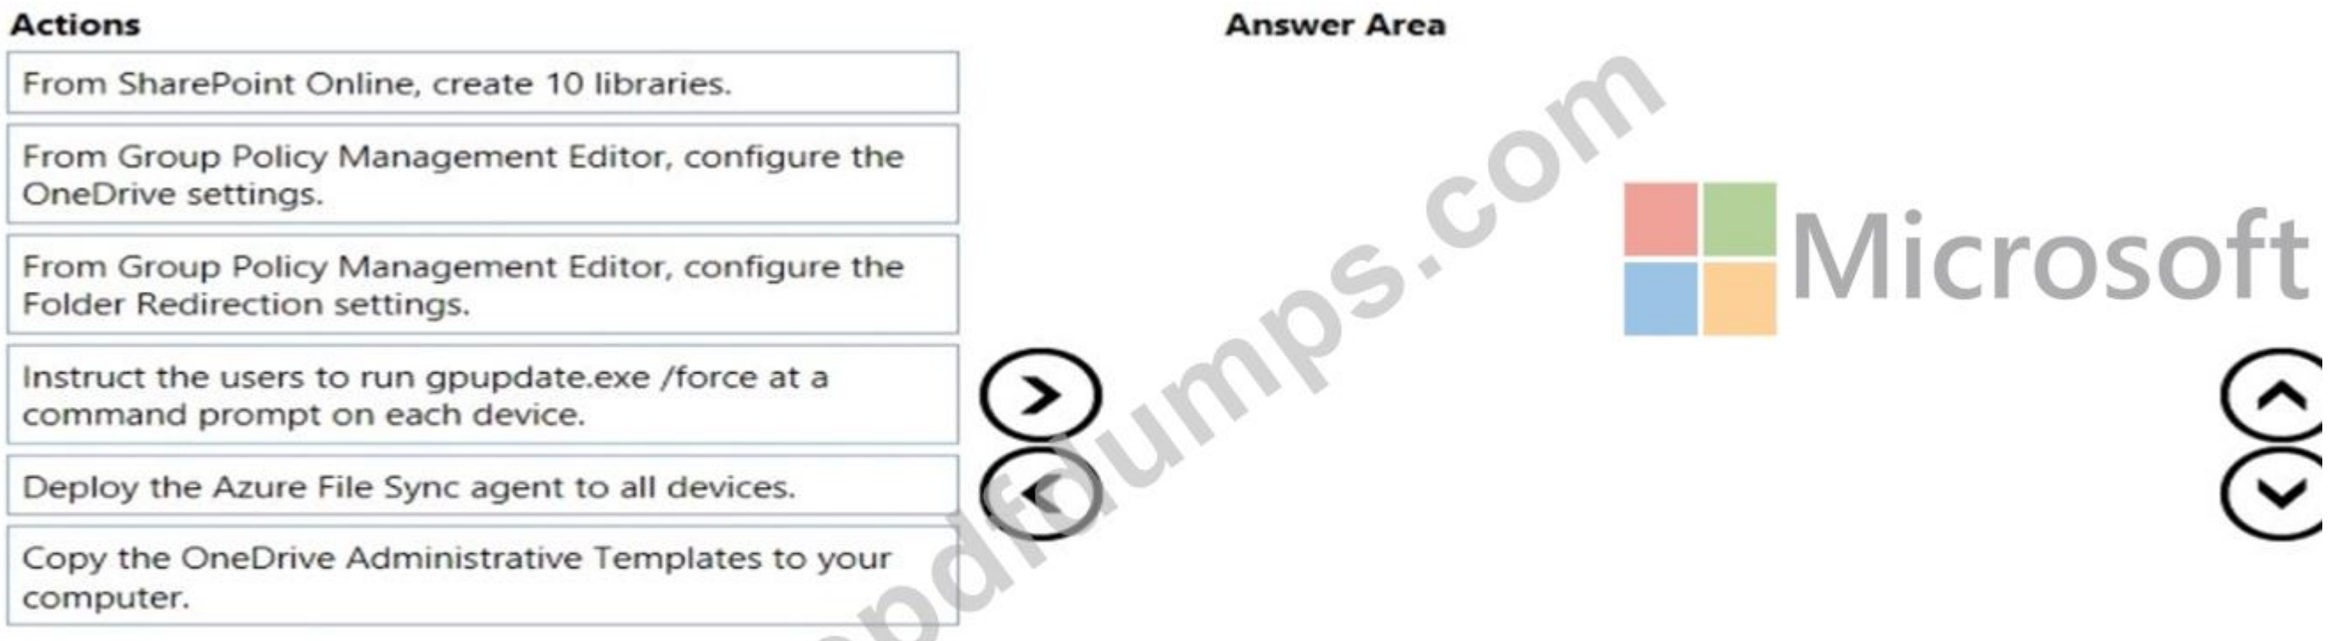
https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo

NEW QUESTION: 156
Your company has a hybrid deployment of Azure Active Directory (Azure AD).
You purchase a Microsoft 365 subscription.
Your company has a hybrid deployment of Azure Active Directory (Azure AD).
You purchase a Microsoft 365 subscription.
You plan to migrate the Home folder of each user to Microsoft 365 during several weeks. Each user has a device that runs Windows 10.
You need to recommend a solution to migrate the Home folder of five administrative users as quickly as possible.
Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order. Each user has a device that runs Windows 10.
You need to recommend a solution to migrate the Home folder of five administrative users as quickly as possible.
Which three actions should you recommend be performed in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.



Answer:

Answer Area

1 - Copy the OneDrive Administrative Templates to your computer.
2 - From Group Policy Management Editor,,,,,,
3 - Instruct the users to run ,,,,

https://practical365.com/clients/onedrive/migrate-home-drives-to-onedrive-for-business/

NEW QUESTION: 157
You have a Microsoft 36S subscription that contains several Microsoft SharePoint Online sites. You discover that users from your company can invite external users to access files on the SharePoint sites. You need to ensure that the company users can invite only authenticated guest users to the sites. What should you do?
A. From the Microsoft 365 admin center, configure a partner relationship.
B. From SharePoint Online Management Shell, run the set-SPOSite cmdlet.
C. From the Azure Active Directory adman center, configure a conditional access policy.
D. From the SharePoint admin center, configure the sharing settings.
Answer: D (LEAVE A REPLY)
You need to set the Sharing settings to 'Existing Guests'. This setting allows sharing only with guests who are already in your directory. These guests may exist in your directory because they previously accepted sharing invitations or because they were manually added.
Reference:
https://docs.microsoft.com/en-us/sharepoint/turn-external-sharing-on-or-off

NEW QUESTION: 158
Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.
When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.
Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.
Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.
Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.
You may now click next to proceed to the lab.
Lab information
Use the following login credentials as needed:
To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.
Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com
Microsoft 365 Password: m3t^We$Z7&xy
If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.
The following information is for technical support purposes only:
Lab Instance: 11440873

You need to add Adele Vance to a group named Managers. The solution must ensure that you can grant permissions to Managers.
To answer, sign in to the Microsoft 365 portal.

Answer:

You need to create a group named Managers and add Adele Vance to the group. To ensure that you can grant permissions to the Managers group, the group needs to be a Security Group.

1. Sign in to the Microsoft 365 Admin Center.
2. In the left navigation pane, expand the Groups section then select Groups.
3. Click the 'Add a group' link.
4. For the group type, select Security and click Next.
5. Enter 'Managers' in the Name field and click Next.
6. Click the 'Create Group' button to create the Managers group.
7. In the list of groups, select the Managers group.
8. Click the Members link.
9. Click the 'View all and manage members link'.
10. Click the 'Add Members' button.
11. Select Adele Vance and click the Save button.
12. Click the Close button to close the group page.

NEW QUESTION: 159

Your company has an on premises Microsoft Exchange Server 2016 organization and a Microsoft 365 Enterprise subscription. You plan to migrate mailboxes and groups to Exchange Online.
You start a new migration batch.
Users report *low performance when they use the on premises Exchange Server organization.

You discover that the migration is causing the slow performance.
You need to reduce the impact of the mailbox migration on the end-users.
What should you do?
A. Create a mail flow rule.
B. Configure back pressure
C. Modify the migration endpoint setting
D. Create a throttling policy.
Answer: C (LEAVE A REPLY)
The migration is causing the slow performance. This suggests that the on-premise Exchange server is struggling under the load of copying the mailboxes to Exchange Online. You can reduce the load on the on-premise server by reducing the maximum number of concurrent mailbox migrations. Migrating just a few mailboxes at a time will have less of a performance impact than migrating many mailboxes concurrently.
Reference:
https://support.microsoft.com/en-gb/help/2797784/how-to-manage-the-maximum-concurrent-migration-batches-in-exchange-onl

NEW QUESTION: 160
You are developing an app that will query the tenant for the names of all the Microsoft Teams teams in the organization. What permission will the app require? Your solution must follow the principle of least privilege.
A. TeamSettings.Read.All
B. Directory.Read.All
C. Channel.ReadBasic.All
D. Group. Read. All
Answer: A (LEAVE A REPLY)

NEW QUESTION: 161
Your network contains an Active Directory domain named contoso.com.
All users authenticate by using a third-party authentication solution.
You purchase Microsoft 365 and plan to implement several Microsoft 365 services.
You need to recommend an identity strategy that meets the following requirements:
Provides seamless SSO
Minimizes the number of additional servers required to support the solution Stores the passwords of all the users in Microsoft Azure Active Directory (Azure AD) Ensures that all the users authenticate to Microsoft 365 by using their on-premises user account You are evaluating the implementation of federation.
Which two requirements are met by using federation? Each correct answer presents a complete solution.
NOTE: Each correct selection is worth one point.
A. minimizes the number of additional servers required to support the solution
B. provides seamless SSO
C. stores the passwords of all the users in Azure AD
D. ensures that all the users authenticate to Microsoft 365 by using their on-premises user account.
Answer: B,D (LEAVE A REPLY)
When you choose this federation as the authentication method, Azure AD hands off the authentication process to a separate trusted authentication system, such as on-premises Active Directory Federation Services (AD FS), to validate the user's password. AD FS can use on-premise Active Directory as an authentication provider. AD FS can also provide SSO when using Active Directory as an authentication provider.

Reference:
https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn

NEW QUESTION: 162
Your network contains an Active Directory domain named fabrikam.com. The domain contains the objects shown in the following table.

Name	Type	In organizational unit (OU)
User1	User	OU1
User2	User	OU1
Group1	Security Group - Global	OU1
User3	User	OU2
Group2	Security Group - Global	OU2

The group have the members shown in the following table.

Group	Members
Group1	User1
Group2	User2, User3, Group1

You are configure synchronization between fabrikam.com and a Microsoft Azure Active Director (Azure AD) tenant.
You configure the domain/OU Filtering settings in Azure AD Connect as shown in the Domain>OU Filtering exhibit. (Click the Domain/OU Filtering tab.) You configure the Filtering in Azure Connect as shown in the Filtering exhibit. (Click the Filtering tab.) NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User2 will synchronize to Azure AD.	○	○
Group2 will synchronize to Azure AD.	○	○
User3 will synchronize to Azure AD.	○	○

Answer:

Answer Area

Statements	Yes	No
User2 will synchronize to Azure AD.	○	●
Group2 will synchronize to Azure AD.	●	○
User3 will synchronize to Azure AD.	●	○

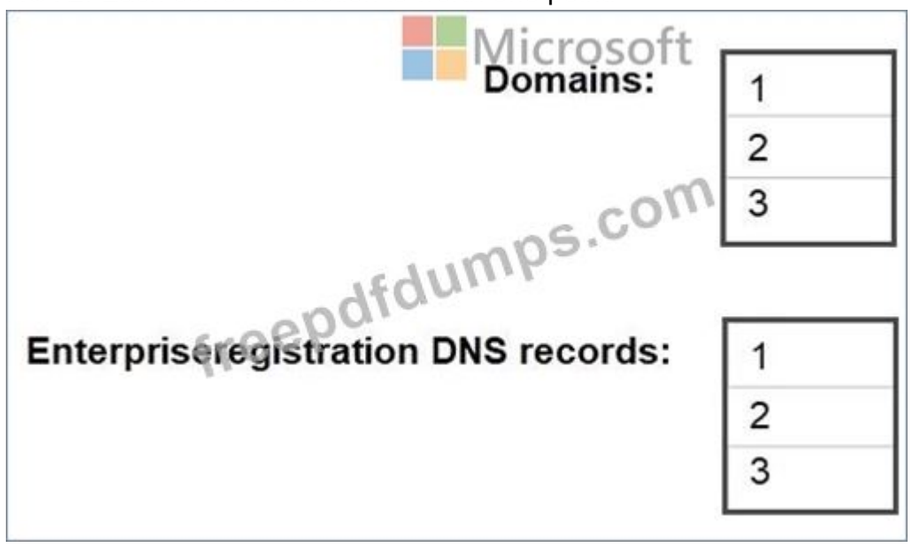
Lab Instance: 10887751
You plan to create 1,000 users in your Microsoft 365 subscription.
You need to ensure that all the users can use the @contoso.com suffix in their username.
Another administrator will perform the required information to your DNS zone to complete the operation.
Answer:
You need to add the contoso.com domain to Microsoft 365 then set the domain as the default.
1. In the Admin Center, click Setup then click Domains.
2. Click the 'Add Domain' button.
3. Type in the domain name (contoso.com) and click the 'Use this domain' button.
4. The question states that another administrator will perform the required information to your DNS zone. Therefore, you just need to click the 'Verify' button to verify domain ownership.
5. Click Finish.
6. In the domains list, select the contoso.com domain.
7. Select 'Set as default'.
Reference:
https://docs.microsoft.com/en-us/office365/admin/setup/add-domain?view=o365-worldwide

NEW QUESTION: 164
You work at a company named Contoso, Ltd.
Contoso has a Microsoft 365 subscription that is configured to use the DNS domains shown in the following table.

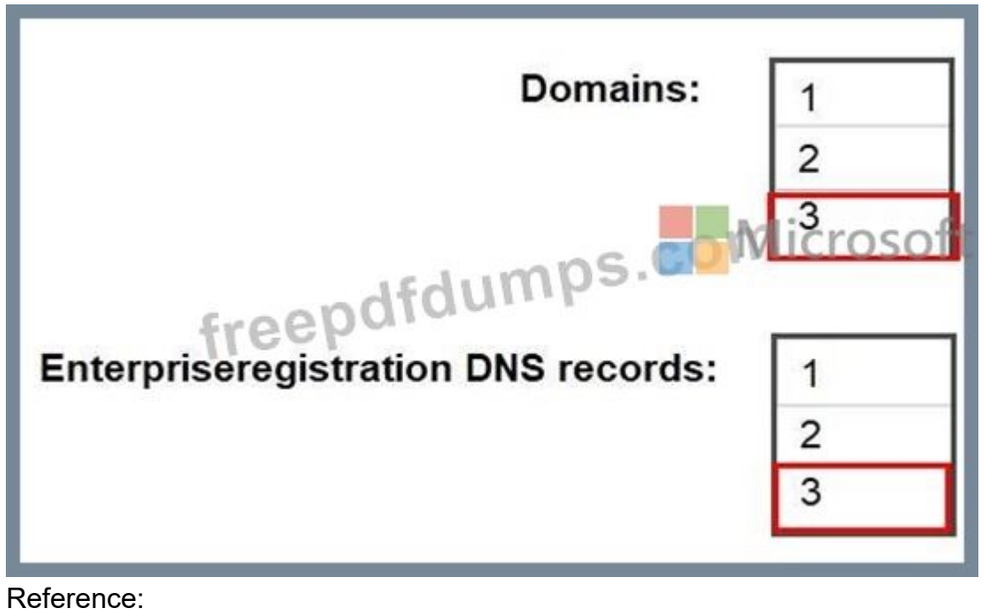
Name	Can enroll devices
Contoso.com	Yes
Contoso.onmicrosoft.com	Yes

Contoso purchases a company named Fabrikam, Inc.
Contoso plans to add the following domains to the Microsoft 365 subscription:
fabrikam.com

east.fabrikam.com
west.contoso.com
You need to ensure that the devices in the new domains can register by using Autodiscover.
How many domains should you verify, and what is the minimum number of enterpriseregistration DNS records you should add? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.



Answer:



Reference:
https://docs.microsoft.com/en-us/mem/intune/enrollment/windows-enroll

NEW QUESTION: 165
Your organization has an on-premises Microsoft Exchange Server 2016 organization. The organization is in the company's main office in Melbourne. The main office has a low-bandwidth connection to the Internet.
The organization contains 250 mailboxes.
You purchase a Microsoft 365 subscription and plan to migrate to Exchange Online next month.

In 12 months, you plan to increase the bandwidth available for the Internet connection.
You need to recommend the best migration strategy for the organization. The solution must minimize administrative effort.
What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.
A. network upload
B. cutover migration
C. hybrid migration
D. staged migration
Answer: C (LEAVE A REPLY)
With a hybrid migration, you can migrate the mailboxes in small batches over a period of time which will help to avoid saturating the bandwidth. With the migration wizard, you can configure a migration batch to start outside office hours which would minimize bandwidth usage during office hours.
With a hybrid migration, you do not need to reconfigure Outlook to connect to the migrated mailbox. Outlook will automatically detect the new mailbox location. This reduces administrative effort.
Reference:
https://docs.microsoft.com/en-us/exchange/mailbox-migration/mailbox-migration

NEW QUESTION: 166
You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).
Currently. App1 can read user profile information
You need to allow App1 to read the user's calendar.
Solution: From the Azure portal, edit the API permission list for App1. Add the Microsoft Graph API and the Calendars-Read permissions and then grant tenant admin consent.
Does this meet the goal?
A. Yes
B. No
Answer: A (LEAVE A REPLY)

NEW QUESTION: 167
Your on-premises network contains five file servers. The file servers host shares that contain user data.
You plan to migrate the user data to a Microsoft 36S subscription.
You need to recommend a solution to import the user data into Microsoft OneDrive.
What should you include in the recommendation?
A. Configure the Migrate of the OneDrive client on your Windows 10 device
B. Configure the Sync settings in the OneDrive admin center.
C. Run the SharePoint Hybrid Configuration Wizard.
D. Run the SharePoint Migration Tool.
Answer: D (LEAVE A REPLY)

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:
SharePoint Server 2013
SharePoint Server 2010
Network and local file shares
Reference:
https://docs.microsoft.com/en-us/sharepointmigration/introducing-the-sharepoint-migration-tool
