NEW QUESTION: 1

You have a Microsoft 365 E5 subscription that uses Microsoft Intune.

You need to access service health alerts from a mobile phone. What should you use?

- A. Intune Company Portal
- B. the Microsoft Authenticator app
- C. the Intune app
- D. the Microsoft 365 Admin mobile app

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 2

You have a Microsoft 365 tenant.

A partner company has an email domain named contoso.com.

You need to prevent out-of-office replies from being sent to contoso.com.

What should you create?

- A. a remote domain
- B. an organization relationship
- C. a rule
- D. a connector

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 3

You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains the users shown in the following table.

You configure the Office software download settings as shown in the exhibit. (Click the Exhibit tab.)

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: No.

User1 does not have an Office 365 license so will be unable to use edit documents in Word online.

Box 2: Yes.

User2 has a Windows device and an Office 365 license.

Box 3: No

Although, User 3 has an Office 365 license, you cannot download Android apps from the Office 365 portal.

You need to download the apps from the Android app store.

NEW QUESTION: 4

You have a Microsoft 365 E5 subscription that contains the groups shown in the following table.

The subscription contains the users shown in the following table.

In Azure AD, you configure the External collaboration settings as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 5

You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.

In the tenant, you create a user named User1.

You need to ensure that User1 can publish retention labels from the Security & Compliance admin center. The solution must use the principle of least privilege.

To which role group should you add User1?

- A. Security Administrator
- B. Records Management
- C. Compliance Administrator
- D. eDiscovery Manager

Answer: (SHOW ANSWER)

Explanation

Members of your compliance team who will create retention labels need permissions to the Security & Compliance Center. By default, your tenant admin has access to this location and can give compliance officers and other people access to the Security & Compliance

Center, without giving them all of the permissions of a tenant admin. To do this, we recommend that you go to the Permissions page of the Security & Compliance Center, edit the Compliance Administrator role group, and add members to that role group.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/labels#permissions>

NEW QUESTION: 6

Your company has a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

An external vendor has a Microsoft account that has a username of user1@outlook.com.

You plan to provide user1@outlook.com with access to several resources in the subscription.

You need to add the external user account to contoso.onmicrosoft.com. The solution must ensure that the external vendor can authenticate by using user1@outlook.com.

What should you do?

- A.** From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify - UserPrincipalName user1@outlook.com.
- B.** From the Microsoft 365 admin center, add a contact, and then specify user1@outlook.com as the email address.
- C.** From the Azure portal, add a new guest user, and then specify user1@outlook.com as the email address.
- D.** From the Azure portal, add a custom domain name, and then create a new Azure AD user and use user1@outlook.com as the username.

Answer: (SHOW ANSWER)

Explanation

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

NEW QUESTION: 7

Your company has a Microsoft 365 subscription.

You plan to move several archived PST files to Microsoft Exchange Online mailboxes.

You need to create an import job for the PST files.

Which three actions should you perform before you create the import job? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a Microsoft Azure Storage account.
- B. From Microsoft 365 Security & Compliance, retrieve the SAS key.
- C. Run azcopy.exe to copy the PST files to Microsoft Azure Storage
- D. Use Microsoft Azure Storage Explorer to copy the PST files to Azure Storage.
- E. Create a PST import mapping file.

Answer: ([SHOW ANSWER](#))

Explanation

The first step is to download and install the Azure AzCopy tool, which is the tool that you run in Step 2 to upload PST files to Office 365. You also copy the SAS URL for your organization. This URL is a combination of the network URL for the Azure Storage location in the Microsoft cloud for your organization and a Shared Access Signature (SAS) key. This key provides you with the necessary permissions to upload PST files to your Azure Storage location.

Now you're ready to use the AzCopy.exe tool to upload PST files to Office 365. This tool uploads and stores them in an Azure Storage location in the Microsoft cloud.

After the PST files have been uploaded to the Azure Storage location for your Office 365 organization, the next step is to create a comma-separated value (CSV) file that specifies which user mailboxes the PST files will be imported to. You'll submit this CSV file when you create a PST Import job.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/use-network-upload-to-import-pst-files>

NEW QUESTION: 8

You are evaluating the required processes for Project1.

You need to recommend which DNS record must be created before you begin the project.

Which DNS record should you recommend?

- A. alias (CNAME)
- B. host (A)
- C. host (AAA)
- D. mail exchanger (MX)

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 9

You have a Microsoft 365 subscription linked to an Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

In the subscription, an administrator adds two custom domains named sub1.contoso.onmicrosoft.com and sub2.contoso.onmicrosoft.com and the objects shown in the following table.

You plan to delete sub1.contoso.onmicrosoft.com and sub2.contoso.onmicrosoft.com.

Which objects must you delete or modify manually before you can delete the domains? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Anything with an email address in the subdomain needs to be removed or moved to another domain. This includes users, mail-enabled security groups, distribution groups and contacts. Office 365 groups will also need to be removed from the subdomains (they cannot be moved to another domain). However, the only Office 365 group in this question is in the parent domain, not the subdomains.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/admin/get-help-with-domains/remove-a-domain?view=o365-wo>

NEW QUESTION: 10

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You review the Security & Compliance report in the Microsoft 365 admin center.

Does this meet the goal?

A. Yes

B. No

Answer: (SHOW ANSWER)

Explanation

The Security & Compliance reports in the Microsoft 365 admin center are reports regarding security and compliance for your Office 365 Services. For example, email usage reports, Data Loss Prevention reports etc.

They do not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/download-existing-reports>

NEW QUESTION: 11

This question requires that you evaluate the underlined text to determine if it is correct-In Microsoft Word on Windows, before you can sideload a Microsoft Office Add-in, you must first: upload the manifest to Microsoft OneDrive instructions: Review the underlined text. If it makes the statement correct select "No change is needed," If the statement is incorrect select the answer choice that makes the statement correct

- A. deploy the manifest to an Azure website
- B. publish the manifest to a trusted network location
- C. set Microsoft Edge to Developer Mode
- D. No change is needed.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 12

You publish an enterprise application named App1 that process financial data. You need to ensure that access to App1 is revoked for users who no longer require view the processed financial data.

What should you configure?

- A. An access review
- B. An app protection policy
- C. A conditional access policy
- D. An owner

Answer: C (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/governance/create-access-review>

NEW QUESTION: 13

Your company has a Microsoft 365 subscription.

You upload several archive PST files to Microsoft 365 by using the Security & Compliance admin center.

A month later, you attempt to run an import job for the PST files.

You discover that the PST files were deleted from Microsoft 365.

What is the most likely cause of the files being deleted? More than one answer choice may achieve the goal.

Select the BEST answer.

- A. The PST files were corrupted and deleted by Microsoft 365 security features.
- B. PST files are deleted automatically from Microsoft 365 after 30 days.
- C. The size of the PST files exceeded a storage quota and caused the files to be deleted.
- D. Another administrator deleted the PST files.

Answer: B (LEAVE A REPLY)

Explanation

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/faqimporting-pst-files-to-office-365> You can use the Office 365 Import Service to bulk-import PST files to Office 365 mailboxes.

When you use the network upload method to import PST files, you upload them to an Azure blob container named ingestiondata. If there are no import jobs in progress on the Import page in the Security & Compliance Center), then all PST files in the ingestiondata container in Azure are deleted 30 days after the most recent import job was created in the Security & Compliance Center.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/faqimporting-pst-files-to-office-365>

NEW QUESTION: 14

You have an on-premises call center and a Microsoft 365 E5 tenant.

You plan to implement Microsoft Phone System Direct Routing and Microsoft Teams.

What should you include in the solution?

- A. Skype for Business Cloud Connector Edition
- B. Azure AD Connect
- C. a local number port order request
- D. a Session Border Controller (SBC)

Answer: D (LEAVE A REPLY)

NEW QUESTION: 15

Your company has a Microsoft 365 E3 subscription.

All devices run Windows 10 Pro and are joined to Microsoft Azure Active Directory (Azure AD).

You need to change the edition of Windows 10 to Enterprise the next time users sign in to their computer. The solution must minimize downtime for the users.

What should you use?

- A. Subscription Activation
- B. Windows Update
- C. Windows Autopilot
- D. an in-place upgrade

Answer: C (LEAVE A REPLY)

Explanation

When initially deploying new Windows devices, Windows Autopilot leverages the OEM-optimized version of Windows 10 that is preinstalled on the device, saving organizations the effort of having to maintain custom images and drivers for every model of device being used. Instead of re-imaging the device, your existing Windows 10 installation can be transformed into a "business-ready" state, applying settings and policies, installing apps,

and even changing the edition of Windows 10 being used (e.g. from Windows 10 Pro to Windows 10 Enterprise) to support advanced features.

Reference:

<https://docs.microsoft.com/en-us/windows/deployment/windows-autopilot/windows-autopilot>

NEW QUESTION: 16

Your network contains three Active Directory forests.

You create a Microsoft Azure Active Directory (Azure AD) tenant.

You plan to sync the on premises Active Directory (Azure AD).

You need to recommend a synchronization solution. The solution must ensure that the synchronization can complete successfully and as quickly as possible if a single server fails.

What should you include in the recommendation?

- A.** Three Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode
- B.** One Azure AD Connect sync servers one Azure AD Connect sync servers in staging mode
- C.** Three Azure AD Connect sync servers and one Azure AD Connect sync servers in staging mode
- D.** six Azure AD Connect sync servers and three Azure AD Connect sync servers in staging mode

Answer: B (LEAVE A REPLY)

Explanation

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for redundancy but the additional installation would need to be in Staging mode. An Azure AD connect installation in Staging mode is configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom>

NEW QUESTION: 17

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com.

You need to ensure that User2 can access the resources in Azure AD.

Solution: From the on-premises Active Directory domain, you set the UPN suffix for User2 to @contoso.com.

You instruct User2 to sign in as user2@contoso.com.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

Explanation

The on-premises Active Directory domain is named contoso.com. You can enable users to sign on using a different UPN (different domain), by adding the domain to Microsoft 365 as a custom domain. Alternatively, you can configure the user account to use the existing domain (contoso.com).

NEW QUESTION: 18

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.

* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that contains a pass-through authentication model. You install an Authentication Agent on three servers and configure seamless SSO.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

Explanation

This solution meets all the requirements:

* Users must be able to authenticate during business hours only. (This can be configured by using Logon Hours in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory)

* Authentication requests must be processed successfully if a single server fails. (We have Authentication Agents running on three servers)

* When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in. (This can be configured in Active Directory. Pass-through authentication passes authentication to the on-premise Active Directory)

* Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically. (This goal is met by seamless SSO) Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION: 19

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You deploy Microsoft 365.

You plan to implement directory synchronization.

You need to recommend a security solution for the synchronized identities. The solution must meet the following requirements:

* Users must be able to authenticate successfully to Microsoft 365 services if Active Directory becomes unavailable.

* Users passwords must be 10 characters or more.

Solution: Implement password hash synchronization and modify the password settings from the Default Domain Policy in Active Directory.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

Explanation

This solution meets the requirements:

* Users must be able to authenticate successfully to Microsoft 365 services if Active Directory becomes unavailable. (this is because the authentication is performed by Azure Active Directory).

* Users passwords must be 10 characters or more. (the Default Domain Policy in the on-premise Active Directory can be configured to require the password length) Reference: <https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-password-hash-synchronization>

NEW QUESTION: 20

You have a Microsoft 365 Enterprise E5 subscription.

You add a cloud-based app named App1 to the Microsoft Azure Active Directory (Azure AD) enterprise applications list.

You need to ensure that two-step verification is enforced for all user accounts the next time they connect to App1.

Which three settings should you configure from the policy? To answer, select the appropriate settings in the answer area.

Answer:

Explanation

In the Cloud Apps section, you need to select the name of the app (App1) that the policy will apply to.

In the Grant section under Access Controls, there is a checkbox named "Require Multi-factor Authentication".

That checkbox needs to be ticked.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/best-practices>

<https://techcommunity.microsoft.com/t5/Enterprise-Mobility-Security/Conditional-Access-now-in-the-new-Azur>

NEW QUESTION: 21

You need to recommend the development environment and tools for the redesign of the research department's SharePoint Online sites.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Graphical user interface, text, application Description automatically generated

NEW QUESTION: 22

Your network contains an Active Directory domain named adatum.com that is synced to Microsoft Azure Active Directory (Azure AD).

The domain contains 100 user accounts.

The city attribute for all the users is set to the city where the user resides.

You need to modify the value of the city attribute to the three-letter airport code of each city.

What should you do?

- A.** From Active Directory Administrative Center, select the Active Directory users, and then modify the Properties settings.
- B.** From the Microsoft 365 admin center, select the users, and then use the Bulk actions option.
- C.** From Azure Cloud Shell, run the Get-MsolUser and Set-MSOLuser cmdlets.
- D.** From Windows PowerShell on a domain controller, run the Get-AzureADUser and Set-AzureADUser cmdlets.

Answer: A (LEAVE A REPLY)

Explanation

The user accounts are synced from the on-premise Active Directory to the Microsoft Azure Active Directory (Azure AD). Therefore, the city attribute must be changed in the on-premise Active Directory.

You can modify certain attributes of multiple user accounts simultaneously by selecting them in Active Directory Administrative Center or Active Directory Users and Computers, right clicking then selecting Properties.

The other three options all suggest modifying the city attribute of the users in the Azure Active Directory which is incorrect.

Reference:

<https://blogs.technet.microsoft.com/canitpro/2015/11/25/step-by-step-managing-multiple-user-accounts-via-activ>

NEW QUESTION: 23

You have a Microsoft 365 subscription and a hybrid Microsoft Exchange Online deployment.

You plan to deploy iOS devices that will use Outlook for iOS and Hybrid Modem Authentication (HMA).

You need to ensure that HMA is configured correctly.

What should you use?

- A.** Microsoft Remote Connectivity Analyzer
- B.** Microsoft Support and Recovery Assistant

- C. Apple Configurator
- D. Microsoft Diagnostics and Recovery Toolset (DaRT)

Answer: (SHOW ANSWER)

NEW QUESTION: 24

Your network contains an Active Directory domain. The domain contains a server named Server1 that runs Windows Server 2016. Server1 has a share named Share1.

You have a hybrid deployment of Microsoft 365.

You need to migrate the content in Share1 to Microsoft OneDrive.

What should you use?

- A. Windows Server Migration Tools
- B. Microsoft SharePoint Migration Tool
- C. Storage Migration Service

Answer: B (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/sharepointmigration/migrating-content-to-onedrive-for-business>

NEW QUESTION: 25

You have a hybrid deployment of Microsoft 365 and an Azure Active Directory (Azure AD) tenant. The tenant contains the users shown in the following table.

Password protection in Azure AD is configured as shown in the following exhibit.

Which users will be prevented from using the word "Contoso" as part of their password?

- A. User1 only
- B. User1 and User2 only
- C. User1 and User3 only
- D. User1, User2, and User3

Answer: (SHOW ANSWER)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad>

NEW QUESTION: 26

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@M365x981607.onmicrosoft.com

Microsoft 365 Password: *yfLo7lr2&y-

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You need to prevent the users in your organization from establishing voice calls from Microsoft Skype for Business to external Skype users.

Answer:

See explanation below.

Explanation

You need to configure the External Communications settings in the Skype for Business admin center.

1. You need to go to the Skype for Business admin center. If you see a Skype for Business admin center in the admin center list in the Microsoft portal, open it and skip to step 4.
2. If you don't see a Skype for Business admin center in the admin center list in the Microsoft portal, open the Teams admin center.
3. In the Teams admin center, choose Skype > Legacy Portal.
4. In the Skype for Business admin center, select Organization.
5. Select External communications.
6. Untick the 'Let people use Skype for Business to communicate with Skype users outside your organization' checkbox.
7. Click Save to save the changes.

NEW QUESTION: 27

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. You have three applications App1, App2, App3. The Apps use files that have the same file extensions.

Your company uses Windows Information Protection (WIP). WIP has the following configurations:

- * Windows Information Protection mode: Silent
- * Protected apps: App1
- * Exempt apps: App2

From App1, you create a file named File1.

What is the effect of the configurations? To answer, select the appropriate options in the answer area.

Answer:

Explanation

Exempt apps: These apps are exempt from this policy and can access corporate data without restrictions.

Windows Information Protection mode: Silent: WIP runs silently, logging inappropriate data sharing, without stopping anything that would've been prompted for employee interaction while in Allow overrides mode.

Unallowed actions, like apps inappropriately trying to access a network resource or WIP-protected data, are still stopped.

Reference:

<https://docs.microsoft.com/en-us/intune/apps/windows-information-protection-policy-create>

<https://docs.microsoft.com/en-us/windows/security/information-protection/windows-information-protection/crea>

NEW QUESTION: 28

You have an on-premises Microsoft Exchange Server organization that contains 100 mailboxes.

You have a hybrid Microsoft 365 tenant.

You run the Hybrid Configuration wizard and migrate the mailboxes to the tenant.

You need to ensure that Microsoft 365 spam filtering is applied to incoming email.

What should you do?

- A. Run the Hybrid Configuration wizard again.
- B. Update the Sender Policy Framework (SPF) TXT record to point to the on-premises Exchange IP address.
- C. Run the Azure Active Directory Connect wizard again.
- D. Update the MX record to point to Exchange Online.

Answer: D (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/exchange/mail-flow-best-practices/manage-mailboxes-using-microsoft-365-or->

NEW QUESTION: 29

You have a Microsoft 365 subscription that uses a default named contoso.com.

Three files were created on February 1, 2019, as shown in the following table.

On March 1, 2019, you create two retention labels named Label1 and label2.

The settings for Label1 are configured as shown in the Label1 exhibit. (Click the Label1 tab.) Label 1

The settings for Label2 are configured as shown in the Label1 exhibit. (Click the Label2 tab.) Label 2

You apply the retention labels to Exchange email, SharePoint sites, and OneDrive accounts.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: No

Retention overrides deletion.

Box 2: No

Content in a document library will be moved to the first-stage Recycle Bin within 7 days of disposition, and then permanently deleted another 93 days after that. Thus 100 days in total.

Box 3: No

Items in an Exchange mailbox will be permanently deleted within 14 days of disposition.

References:

<https://docs.microsoft.com/en-us/office365/securitycompliance/labels>

<https://docs.microsoft.com/en-us/office365/securitycompliance/disposition-reviews>

NEW QUESTION: 30

You have a Microsoft 365 subscription that contains a guest user named User1. User1 is assigned the User administrator role.

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.

Contoso.com is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Default permissions for guests are restrictive by default. Guests can be added to administrator roles, which grant them full read and write permissions contained in the role. There is one additional restriction available, the ability for guests to invite other guests. Setting Guests can invite to No prevents guests from inviting other guests. User1 is assigned the User Administrator role. Therefore, User1 can open the Azure portal, view users, create new users, and create new guest users. In the exhibit, the 'Guest user permissions are limited' is set to no. This means that guest users have the same permissions as members. However, the 'Guests can invite' setting is set to No. Therefore, other guest users (all guest users except User1) can open the Azure portal and view users in the same way as member users can.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations>

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/users-default-permissions>

NEW QUESTION: 31

You are developing a Microsoft Teams tab.

You need to create a modal dialog to collect input from a user.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 32

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure a pilot for co-management.

You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager.

Solution: Define a Configuration Manager device collection as the pilot collection. Add Device1 to the collection.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

Explanation

Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration Manager.

To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection so that it auto-enrols in Microsoft Intune. You will then be able to manage Device1 using Microsoft Intune.

Reference:

<https://docs.microsoft.com/en-us/configmgr/comanage/how-to-enable>

NEW QUESTION: 33

You have a Microsoft 365 subscription.

You register two applications named App1 and App2 to Azure Active Directory (Azure AD).

You need to ensure that users who connect to App1 require multi-factor authentication (MFA). MFA is required only for App1.

What should you do?

A. From the Microsoft 365 admin center, configure the Modern authentication settings.

B. From Multi-Factor Authentication, configure the service settings.

C. From the Enterprise applications blade of the Azure Active Directory admin center, configure the Users settings.

D. From the Azure Active Directory admin center, create a conditional access policy.

Answer: D (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/howto-conditional-access-policy-all-u>

NEW QUESTION: 34

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain.

You deploy a Microsoft Azure Active Directory (Azure AD) tenant.

Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD.

Solution: From the Synchronization Rules Editor, you create a new outbound synchronization rule.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Explanation

The question states that "all the user account synchronizations completed successfully". Therefore, the synchronization rule is configured correctly. It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering>

NEW QUESTION: 35

Your network contains an on-premises Active Directory domain.

You have a Microsoft 365 subscription.

You implement a directory synchronization solution that uses pass-through authentication.

You configure Microsoft Azure Active Directory (Azure AD) smart lockout as shown in the following exhibit.

You discover that Active Directory users can use the passwords in the custom banned passwords list.

You need to ensure that banned passwords are effective for all users.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. From a domain controller, install the Azure AD Password Protection Proxy.

- B.** From a domain controller, install the Microsoft AAD Application Proxy connector.
- C.** From Custom banned passwords, modify the Enforce custom list setting.
- D.** From Password protection for Windows Server Active Directory, modify the Mode setting.
- E.** From all the domain controllers, install the Azure AD Password Protection DC Agent.
- F.** From Active Directory, modify the Default Domain Policy.

Answer: A,C,E (LEAVE A REPLY)

Explanation

References:

Azure AD password protection is a feature that enhances password policies in an organization. On-premises deployment of password protection uses both the global and custom banned-password lists that are stored in Azure AD. It does the same checks on-premises as Azure AD does for cloud-based changes. These checks are performed during password changes and password reset scenarios.

You need to install the Azure AD Password Protection Proxy on a domain controller and install the Azure AD Password Protection DC Agent on all domain controllers. When the proxy and agent are installed and configured, Azure AD password protection will work. In the exhibit, the password protection is configured in Audit mode. This is used for testing. To enforce the configured policy, you need to set the password protection setting to Enforced.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premises-de>

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad-on-premises>

NEW QUESTION: 36

Your company has an Azure AD tenant named contoso.com and a Microsoft 365 subscription.

All users use Windows 10 devices to access Microsoft Office 365 apps.

All the devices are in a workgroup.

You plan to implement passwordless sign-in to contoso.com.

You need to recommend changes to the infrastructure for the planned implementation.

What should you include in the recommendation?

- A.** Deploy Azure AD Application Proxy.
- B.** Deploy X.509.3 certificates to all the users.
- C.** Join all the devices to contoso.com.
- D.** Deploy the Microsoft Authenticator app.

Answer: D (LEAVE A REPLY)

NEW QUESTION: 37

You have a Microsoft 365 subscription.

From the Security & Compliance admin center, you create a content search of all the mailboxes that contain the word ProjectX.

You need to export the results of the content search.

What do you need to download the report?

- A. an export key
- B. a password
- C. a user certificate
- D. a certification authority (CA) certificate

Answer: ([SHOW ANSWER](#))

Explanation

When you export a report, the data is temporarily stored in a unique Azure Storage area in the Microsoft cloud before it's downloaded to your local computer.

To download the report from the Azure Storage Area, you need an export key.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/export-a-content-search-report>

NEW QUESTION: 38

Your network contains an on-premises Active Directory domain named Contoso.com.

Your company purchases a Microsoft 365 subscription and establishes a hybrid deployment of Azure Directory (Azure AD) by using password hash synchronization.

You create a new user User10 on-premises and a new user named User20 in Azure AD.

You need to identify where an administrator can reset the password of each new user.

What should you identify? To answer select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

If a user account is created in the on-premise Active Directory and synchronized to Azure Active Directory, you can reset the password of the user account in the on-premise Active Directory only.

If a user account is created in Azure Active Directory, you can reset the password of the user account in the Azure Active Directory only.

NEW QUESTION: 39

Your company has a Microsoft 365 tenant.

You plan to allow users from the engineering department to enroll their mobile device in mobile device management (MDM).

The device type restrictions are configured as shown in the following table.

The device limit restrictions are configured as shown in the following table.

What is the effective configuration for the members of the Engineering group? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

When multiple policies are applied to groups that users are a member of, only the highest priority (lowest number) policy applies.

In this case, the Engineering users are assigned two device type policies (the default policy and the priority 2 policy). The priority 2 policy has a higher priority than the default policy so the Engineers' allowed platform is Android only.

The engineers have two device limit restrictions policies applied them. The priority1 policy is a higher priority than the priority2 policy so the priority1 policy device limit (15) applies.

Reference:

<https://docs.microsoft.com/en-us/intune/enrollment/enrollment-restrictions-set>

NEW QUESTION: 40

You have Windows 10 devices that are managed by using Microsoft Endpoint Manager as shown in the following table.

You create a Microsoft 365 Suite app as shown in the exhibit (Click the Exhibit Tab.) and assign The app to Group1. On which devices will Microsoft 365 Apps be installed?

- A. Device 1 and Device2 only
- B. Device1, Device2. and Device4 only
- C. Device2 and Device4 only
- D. Device2 only
- E. Device1, Device2, Device3, and Device4

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 41

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@LODSe426243.onmicrosoft.com

Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You hire a new global administrator named Irvin Sayers to manage your Microsoft 365 tenant.

You need to modify Irvin Sayers to meet the following requirements:

- * Uses at least two methods of user authentication
- * Has the highest Microsoft Office 365 administrative privileges

Answer:

See explanation below.

Explanation

You need to assign the Global Admin role to Irvin Sayers. You then need to configure the account to require Multi-Factor Authentication (MFA).

1. In the Microsoft 365 admin center, select Users then select Active Users.
2. Select the Irvin Sayers account to open the account properties blade.
3. In the Roles section, click on the 'Manage roles' link.
4. Select the 'Admin center access' option.
5. Select Global Administrator then click the 'Save changes' button.

The next step is to enable the account for Multi-Factor Authentication (MFA).

1. If the Irvin Sayers account is selected in the user accounts list, deselect it (click on the tick icon next to the account name). Selecting a user account changes the menu options at the top of the page; deselecting the accounts changes the menu options back.
2. Click on the 'Multi-factor authentication' link at the top of the page.
3. In the 'Multi-factor authentication' page, select the Irvin Sayers account.
4. Click the 'Enable' link on the right side of the page.
5. In the pop-up window, click the 'enable multi-factor auth' button.

NEW QUESTION: 42

You have 50 on-premises member servers, a Microsoft 365 E5 subscription, and an Azure subscription.

You plan to monitor the System log events of all the member servers.

You need to configure the Azure subscription and the on-premises member servers to support a centralized log monitoring solution.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 43

You have a Microsoft 365 subscription.

A new corporate security policy states that you must automatically send DLP incident reports to the users in the legal department.

You need to schedule the email delivery of the reports. The solution must ensure that the reports are sent as frequently as possible.

How frequently can you share the reports?

- A. hourly
- B. monthly
- C. weekly
- D. daily

Answer: ([SHOW ANSWER](#))

Explanation

From the Dashboard in the Security and Compliance center, you can view various reports including the DLP Incidents report. From there you can configure a schedule to email the reports. In the schedule configuration, there are two choices for the frequency: Weekly or Monthly. Therefore, to ensure that the reports are sent as frequently as possible, you need to select Weekly.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/create-a-schedule-for-a-report>

NEW QUESTION: 44

You have a Microsoft 365 subscription.

You create an alert policy as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

The 'Activity is' setting is configured as 'Detected malware in file'. This setting means the policy is applied to files stored in SharePoint or OneDrive.

The Aggregation settings has a 120 minute window. This means that if there 20 detections in 120 minutes, an email will be generated. Therefore, the maximum number of emails generated in 24 hours is 12.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/alert-policies>

NEW QUESTION: 45

Your network contains an Active Directory forest named local.

You have a Microsoft 365 subscription. You plan to implement a directory synchronization solution that will use password hash synchronization.

From the Microsoft 365 admin center, you verify the contoso.com domain name. You need to prepare the environment for the planned directory synchronization solution.

What should you do first?

- A. From the public DNS zone of contoso.com, add a new mail exchanger (MX) record.
- B. From Active Directory Domains and Trusts, add contoso.com as a UPN suffix
- C. From the Microsoft 365 admin center, verify the contoso.com domain name.
- D. From Active Directory Users and Computers, modify the UPN suffix for all users.

Answer: B (LEAVE A REPLY)

Explanation

The on-premise Active Directory domain is named contoso.local. Therefore, all the domain users accounts will have a UPN suffix of contoso.local by default.

To enable directory synchronization that will use password hash synchronization, you need to configure the domain user accounts to have the same UPN suffix as the verified domain (contoso.com in this case). Before you can change the UPN suffix of the domain user accounts to contoso.com, you need to add contoso.com as a UPN suffix in the domain.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/plan-connect-userprincipalname>

NEW QUESTION: 46

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@LODSe426243.onmicrosoft.com

Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You plan to provide an external user named fabrikamuser@fabrikam.com with access to several resources in your Microsoft 365 tenant.

You need to ensure that the external user can be added to Office 365 groups.

Answer:

See explanation below.

Explanation

You need to create a guest account for the external user.

1. Go to the Azure Active Directory admin center.
2. Select Users.
3. Click the 'New guest user' link.
4. Select the 'Invite user' option.
5. Give the account a name and enter fabrikamuser@fabrikam.com in the email address field.
6. Click the 'Invite' button.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/b2b-quickstart-add-guest-users-portal>

Valid MS-100 Dumps shared by Actual4test.com for Helping Passing MS-100 Exam! NEW QUESTION: 47

You have a Microsoft 365 subscription.

You view the Service health Overview as shown in the following exhibit.

You need to ensure that a user named User1 can view the advisories to investigate service health issues.

Which role should you assign to User1?

- A. Message Center Reader
- B. Reports Reader
- C. Compliance Administrator
- D. Service Support Administrator

Answer: (SHOW ANSWER)

NEW QUESTION: 48

Your network contains the servers shown in the following table.

You purchase Microsoft 365 Enterprise E5 and plan to move all workloads to Microsoft 365 by using a hybrid identity solution and a hybrid deployment for all workloads.

You need to identify which server must be upgraded before you move to Microsoft 365.

What should you identify?

- A. Server 2
- B. Server 3
- C. Server 5
- D. Server 1
- E. Server 4

Answer: B (LEAVE A REPLY)

Explanation

Exchange Server 2007 is not supported for a hybrid deployment.

Reference:

<https://docs.microsoft.com/en-us/exchange/hybrid-deployment-prerequisites>

NEW QUESTION: 49

Your network contains an on-premises Active Directory domain named contoso.com that is synced to a Microsoft Azure Active Directory (Azure AD) tenant.

The on-premises network contains a file server named Server1. Server1 has a share named Share1 that contains company documents.

Your company purchases a Microsoft 365 subscription.

You plan to migrate data from Share1 to Microsoft 365. Only data that was created or modified during the last three months will be migrated.

You need to identify all the files in Share1 that were modified or created during the last 90 days.

What should you use?

- A. Server Manager
- B. Microsoft SharePoint Migration Tool
- C. Resource Monitor
- D. Usage reports from the Microsoft 365 admin center

Answer: B (LEAVE A REPLY)

Explanation

You can use the Microsoft SharePoint Migration Tool to migrate files from a file server to SharePoint Online.

The Microsoft SharePoint Migration Tool has a number of filters you can use to define which files will be migrated. One filter setting is "Migrate files modified after". This setting will only migrate files modified after the selected date.

The first phase of a migration is to perform a scan of the source files to create a manifest of the files that will be migrated. You can use this manifest to identify all the files in Share1 that were modified or created during the last 90 days.

References:

<https://docs.microsoft.com/en-us/sharepointmigration/spmt-settings>

NEW QUESTION: 50

You have a web app that uses the Microsoft identity Platform.

You extend the application manifest to implement the following role-based access control (RBAC).

When you attempt to save the manifest you receive a validation error. Which key value pair should you modify to resolve the error?

- A. id
- B. appld
- C. allowedMamberType
- D. isEnabled

Answer: (SHOW ANSWER)

NEW QUESTION: 51

You have a Microsoft 365 subscription that contains several Microsoft SharePoint Online sites. You discover that users from your company can invite external users to access files

on the SharePoint sites. You need to ensure that the company users can invite only authenticated guest users to the sites. What should you do?

- A. From the Microsoft 365 admin center, configure a partner relationship.
- B. From SharePoint Online Management Shell, run the set-SPOSite cmdlet.
- C. From the Azure Active Directory admin center, configure a conditional access policy.
- D. From the SharePoint admin center, configure the sharing settings.

Answer: D (LEAVE A REPLY)

Explanation

You need to set the Sharing settings to 'Existing Guests'. This setting allows sharing only with guests who are already in your directory. These guests may exist in your directory because they previously accepted sharing invitations or because they were manually added.

Reference:

<https://docs.microsoft.com/en-us/sharepoint/turn-external-sharing-on-or-off>

NEW QUESTION: 52

You need to ensure that a user named User1 can create documents by using Office Online.

Which two Microsoft Office 365 license options should you turn on for User1? To answer, select the appropriate options in the answer area.

NOTE: Each correct section is worth one point.

Answer:

Explanation

You need "Office Online" to be able to create documents by using Office Online. You also need an online location to save and store the documents. For this, you would use SharePoint online.

NEW QUESTION: 53

You have a Microsoft 365 subscription that contains a Microsoft Azure Directory (Azure AD) tenant Contoso.com. The tenant includes a user named user1.

You enable Azure AD Identity protection.

You need to ensure that User1 can review the list in Azure AD identity protection of users flagged for risk.

The solution must use the principle of least privilege.

To which role should you add User1?

- A. Report
- B. Security administrator
- C. Owner
- D. Global reader

Answer: (SHOW ANSWER)

NEW QUESTION: 54

You need to meet the security requirements for User3. The solution must meet the technical requirements.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

* User3 must be able to manage Office 365 connectors.

* The principle of least privilege must be used whenever possible.

Office 365 connectors are configured in the Exchange Admin Center.

You need to assign User3 the Organization Management role to enable User3 to manage Office 365 connectors.

A Global Admin could manage Office 365 connectors but the Organization Management role has less privilege.

Reference:

<https://docs.microsoft.com/en-us/office365/SecurityCompliance/eop/feature-permissions-in-eop>

NEW QUESTION: 55

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to provide several users in your organization with the ability to join their Windows 10 device to Microsoft Azure Active Directory (Azure AD).

You need to ensure that all the users who join a device use multi-factor authentication.

Answer:

See explanation below.

Explanation

You need to configure the device settings in Azure Active Directory.

1. Go to the Azure Active Directory admin center.
2. Select Azure Active Directory.
3. Select Devices.
4. Select Device Settings.
5. Toggle the 'Require Multi-Factor Auth to join devices' setting to Yes.
6. Click Save to save the changes.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to invite several guest users to access the resources in your organization.

You need to ensure that only guests who have an email address that uses the @contoso.com suffix can connect to the resources in your Microsoft 365 tenant.

Answer:

See explanation below.

Explanation

You need to add contoso.com as an allowed domain in the 'External collaboration settings'.

1. Go to the Azure Active Directory admin center.
2. Select Users then select 'User settings'.
3. Under External Users, select the 'Manage external collaboration settings'.
4. Under 'Collaboration restrictions', select the 'Allow invitations only to the specified domains (most restrictive)' option.
5. Under, Target Domains, type in the domain name 'contoso.com'
6. Click the Save button at the top of the screen to save your changes.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/allow-deny-list>

NEW QUESTION: 57

You have a document in Microsoft OneDrive that is encrypted by using Microsoft Azure Information Protection as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1:

If you copy the file from OneDrive to your internet connected computer, you can open the document for up to 30 days. This is because the "Number of days the content is valid" setting is set to 30 days.

Box 2:

If you email the document to a user outside your organization, the user cannot open the document. To open the document, the user would need to be added to the Users list and assigned permission. With the configuration in the exhibit, only the user listed in the Users list and the creator of the document can open the document.

Reference:

<https://docs.microsoft.com/en-us/azure/information-protection/configure-policy-protection>

NEW QUESTION: 58

From the Microsoft Azure Active Directory (Azure AD) Identity Protection dashboard, you view the risk events shown in the exhibit. (Click the Exhibit tab.)

You need to reduce the likelihood that the sign-ins are identified as risky.

What should you do?

- A.** From the Security & Compliance admin center, add the users to the Security Readers role group.
- B.** From the Conditional access blade in the Azure Active Directory admin center, create named locations.
- C.** From the Azure Active Directory admin center, configure the trusted IPs for multi-factor authentication.
- D.** From the Security & Compliance admin center, create a classification label.

Answer: B (LEAVE A REPLY)

Explanation

A named location can be configured as a trusted location. Typically, trusted locations are network areas that are controlled by your IT department. In addition to Conditional Access, trusted named locations are also used by Azure Identity Protection and Azure AD security reports to reduce false positives for risky sign-ins.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition>

NEW QUESTION: 59

Your network contains an Active Directory domain named contoso.com. The domain contains 1000 Windows 8.1 devices.

You plan to deploy a custom Windows 10 Enterprise image to the Windows 8.1 devices. You need to recommend a Windows 10 deployment method.

What should you recommend?

- A. Wipe and load refresh
- B. Windows Autopilot
- C. a provisioning package
- D. an in-place upgrade

Answer: ([SHOW ANSWER](#))

Explanation

To deploy a custom image, you must use the wipe and load refresh method. You cannot deploy a custom image by using an in-place upgrade, Windows Autopilot or a provisioning package.

Reference:

<https://docs.microsoft.com/en-us/windows/deployment/windows-10-deployment-scenarios>

NEW QUESTION: 60

You have a Microsoft 365 tenant that contains the users shown in the following table.

Microsoft Exchange Online has the mail flow rules shown in the following table

Rule1 has the following settings:

Answer:

Explanation

NEW QUESTION: 61

You have three devices enrolled in Microsoft Intune as shown in the following table.

The device compliance policies in Intune are configured as shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Device 1:

No because Device1 is in group3 which has Policy1 assigned which requires BitLocker.

Device 2:

No because Device2 is in group3 which has Policy1 assigned which requires BitLocker.

Device2 is also in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2.

Device3:

Yes because Device3 is in Group2 which has Policy2 assigned but the BitLocker requirement is not configured in Policy2.

NEW QUESTION: 62

Your network contains an Active Directory domain.

You deploy a Microsoft Azure Active Directory (Azure AD) tenant.

Another administrator configures the domain the synchronization to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized to successfully.

You review Azure AD Connect Health and discover that all the user account synchronization completed.

You discover AD Connect Health and discover that at the user account synchronization to Azure AD.

Solution: You run idfix.exe and export the 10 user accounts.

A. Yes

B. No

Answer: B (LEAVE A REPLY)

NEW QUESTION: 63

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- * Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses federation authentication by using Active Directory Federation Services (AD FS). The solution contains two AD FS servers and two Web Application Proxies.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Explanation

This solution meets the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.

The following requirement is not met:

- * Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

To meet this requirement, you would need to configure seamless Single Sign-on (SSO)

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION: 64

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain.

You deploy a Microsoft Azure Active Directory (Azure AD) tenant.

Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD.

Solution: From Azure AD Connect, you modify the Azure AD credentials.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Explanation

The question states that "all the user account synchronizations completed successfully". Therefore, the Azure AD credentials are configured correctly in Azure AD Connect. It is likely that the 10 user accounts are being excluded from the synchronization cycle by a filtering rule.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering>

NEW QUESTION: 65

You are confirming an enterprise application named Test App in Microsoft Azur as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 66

You have a Microsoft 365 subscription you use Active Directory (Azure AD) tenant named contoso.com. The tenant contains the Windows 10 devices shown in the following table. All the devices are managed by using Microsoft Endpoint Manager and are members of a group named Group1.

From the Microsoft Endpoint Manager admin center, you create an app suite named App1 for Microsoft Office

365 apps.

You configure the App1 settings as shown in the exhibit. (Click the Exhibit tab.)

You assign App1 to Group1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

Note: Each correct selection is worth one point.

Answer:

Explanation

Box 1: No

Device1 is x86 (32-bit) so Office 365 will not be installed.

Box 2: Yes

Device2 is x64 (64-bit) so Office 365 will be installed. The German language pack will be installed and the OS language pack (English) will be installed.

Box 3: Yes

Device2 is x64 (64-bit) so Office 365 will be installed. The German language pack will be installed and the OS language pack (French) will be installed.

Reference:

<https://docs.microsoft.com/en-us/mem/intune/apps/apps-add-office365>

NEW QUESTION: 67

You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1.

You enable Azure AD Identity Protection.

You need to ensure that User1 can review the list in Azure AD Identity Protection of users flagged for risk.

The solution must use the principle of least privilege.

To which role should you add User1?

- A. Security reader
- B. User administrator
- C. Service administrator
- D. Reports reader

Answer: A (LEAVE A REPLY)

Explanation

Either one of the following three roles can review the list in Azure AD Identity Protection of users flagged for risk:

- * Security Administrator
- * Global Administrator
- * Security Reader

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-risky-sign-ins>

NEW QUESTION: 68

You have a Microsoft 365 subscription that has Conditional Access policy named Policy1. Policy1 is configured as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

Answer:

Explanation

Graphical user interface, text, application Description automatically generated

NEW QUESTION: 69

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

Your company has a main office and three branch offices. All the branch offices connect to the main office by using a WAN link. The main office has a high-speed Internet connection. All the branch offices connect to the Internet by using the main office connection.

Users use Microsoft Outlook 2016 to connect to 4 Microsoft Exchange Server mailbox hosted in the main office.

The users report that when the WAN link in their office becomes unavailable, they cannot access their mailbox.

You create a Microsoft 365 subscription, and then migrate all the user data to Microsoft 365.

You need to ensure that all the users can continue to use Outlook to receive email messages if a WAN link fails.

Solution: For each device, you configure an additional Outlook profile that uses IMAP.

Does this meet the goal?

A. Yes

B. NO

Answer: B (LEAVE A REPLY)

NEW QUESTION: 70

You have a Microsoft 365 E5 subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com.

You purchase a DNS domain named fabnkam.com.

You need to ensure that Microsoft Exchange Online users can receive emails sent to the fabrikam.com domain.

What should you use?

A. the Microsoft 365 compliance center

B. the Exchange admin center

C. the Microsoft Endpoint Manager admin center

D. the Microsoft 365 admin center

Answer: D (LEAVE A REPLY)

NEW QUESTION: 71

Your company has a hybrid deployment of Microsoft 365.

Users authenticate by using pass-through authentication. Several Microsoft Azure AD Connect Authentication Agents are deployed.

You need to verify whether all the Authentication Agents are used for authentication.

What should you do?

A. From the Azure portal, use the Troubleshoot option on the Pass-through authentication page.

B. From Performance Monitor, use the #PTA authentications counter.

C. From the Azure portal use the Diagnostics settings on the Monitor blade.

D. From Performance Monitor, use the Kerberos authentications counter.

Answer: (SHOW ANSWER)

Explanation

On the Troubleshoot page, you can view how many agents are configured. If you click on the agents link, you can view the status of each agent. Each agent will have a status of Active or Inactive.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/tshoot-connect-pass-through-authentication>

NEW QUESTION: 72

You have a Microsoft 365 subscription.

You plan to enable Microsoft Azure Information Protection.

You need to ensure that only the members of a group named PilotUsers can protect content.

What should you do?

A. Run the Add-AadrmRoleBaseAdministrator cmdlet.

B. Create an Azure Information Protection policy.

C. Configure the protection activation status for Azure Information Protection.

D. Run the Set-AadrmOnboardingControlPolicy cmdlet.

Answer: D (LEAVE A REPLY)

Explanation

If you don't want all users to be able to protect documents and emails immediately by using Azure Rights Management, you can configure user onboarding controls by using the Set-AadrmOnboardingControlPolicy References:

<https://docs.microsoft.com/en-us/azure/information-protection/activate-service>

NEW QUESTION: 73

Your on-premises network contains the web application shown in the following table.

You purchase Microsoft 365, and you implement directory synchronization.

You plan to publish the web applications.

You need to ensure that all the applications are accessible by using the My Apps portal.

The solution must minimize administrative effort.

What should you do first?

A. Deploy one conditional access policy.

B. Deploy one Application Proxy connector.

C. Create four application registrations.

D. Create a site-to-site VPN from Microsoft Azure to the on-premises network.

Answer: (SHOW ANSWER)

Explanation

The Application Proxy connector is what connects the on-premises environment to the Azure Application Proxy.

Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy>

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-connectors>

NEW QUESTION: 74

You have a Microsoft 365 E5 subscription that uses Endpoint security.

You need to create a group and assign the Endpoint Security Manager role to the group, Which type of group can you use?

- A. distribution, mail-enabled security. Microsoft 365 and security
- B. security only
- C. mail-enabled security and security only
- D. mail-enabled security, Microsoft 365. and security only
- E. Microsoft 365 only

Answer: E (LEAVE A REPLY)

NEW QUESTION: 75

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@LODSe426243.onmicrosoft.com

Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You plan to create 1,000 users in your Microsoft 365 subscription.

You need to ensure that all the users can use the @contoso.com suffix in their username.

Another administrator will perform the required information to your DNS zone to complete the operation.

Answer:

See explanation below.

Explanation

You need to add the contoso.com domain to Microsoft 365 then set the domain as the default.

1. In the Admin Center, click Setup then click Domains.
2. Click the 'Add Domain' button.
3. Type in the domain name (contoso.com) and click the 'Use this domain' button.
4. The question states that another administrator will perform the required information to your DNS zone.

Therefore, you just need to click the 'Verify' button to verify domain ownership.

5. Click Finish.
6. In the domains list, select the contoso.com domain.
7. Select 'Set as default'.

References:

<https://docs.microsoft.com/en-us/office365/admin/setup/add-domain?view=o365-worldwide>

NEW QUESTION: 76

Your company has a Microsoft 365 subscription.

Your plan to add 100 newly hired temporary users to the subscription next week.

You create the user accounts for the new users.

You need to assign licenses to the new users.

Which command should you run?

- A. Option A
- B. Option B
- C. Option C
- D. Option D

Answer: B (LEAVE A REPLY)

Explanation

The first line gets all users from the Temp department that have a UsageLocation assigned and stores them in the \$NewStaff variable. You cannot use PowerShell to assign a license to a user that does not have a UsageLocation configured.

The second line adds the licenses to each user in the \$NewStaff variable.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/powershell/assign-licenses-to-user-accounts-with-office-36>

Valid MS-100 Dumps shared by Actual4test.com for Helping Passing MS-100 Exam! NEW QUESTION: 77

You have a Microsoft 365 E5 subscription. You plan to use supervised chat in Microsoft Teams. You need to configure chat permission roles. Which policy type should you use?

- A. messaging
- B. permission
- C. setup
- D. teams

Answer: (SHOW ANSWER)

NEW QUESTION: 78

You have a Microsoft 365 subscription. All users have client computers that run Windows 10 and have Microsoft Office 365 ProPlus installed.

Some users in the research department work for extended periods of time without an Internet connection.

How many days can the research department users remain offline before they are prevented from editing Office documents?

- A. 10
- B. 30

C. 90

D. 120

Answer: B (LEAVE A REPLY)

Explanation

After 30 days, Microsoft Office 365 ProPlus will go into reduced functionality mode. When this happens, users will be able to open files but they won't be able to edit them.

As part of the installation process, Office 365 ProPlus communicates with the Office Licensing Service and the Activation and Validation Service to obtain and activate a product key. Each day, or each time the user logs on to their computer, the computer connects to the Activation and Validation Service to verify the license status and extend the product key. As long as the computer can connect to the Internet at least once every 30 days, Office remains fully functional. If the computer goes offline for more than 30 days, Office enters reduced functionality mode until the next time a connection can be made.

Reference:

<https://docs.microsoft.com/en-us/deployoffice/overview-of-licensing-and-activation-in-office-365-proplus>

NEW QUESTION: 79

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that includes the users shown in the following table.

Group2 is a member of Group1.

You assign a Microsoft Office 365 Enterprise E3 license to User2 as shown in the following exhibit.

You assign Office 365 Enterprise E3 licenses to Group1 as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Group-based licensing currently does not support groups that contain other groups (nested groups). If you apply a license to a nested group, only the immediate first-level user members of the group have the licenses applied.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-group-advanced>

NEW QUESTION: 80

Your company uses a legacy on-premises LDAP directory that contains 100 users.

The company purchases a Microsoft 365 subscription.

You need to import the 100 users into Microsoft 365 by using the Microsoft 365 admin center.

Which type of file should you use and which properties are required? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 81

You manage multiple devices by using Microsoft Endpoint Manager. The devices run on the following operating systems:

Android 8.0, Android 8.1.0, and Android 9

iOS 12 and iOS 13

MacOS 10.14

Windows 10

You need to deploy Microsoft 365 apps to the devices.

From the Microsoft Endpoint Manager admin center, what is the minimum number of apps you should create?

A. 1

B. 3

C. 4

D. 7

Answer: ([SHOW ANSWER](#))

Reference:

<https://docs.microsoft.com/en-us/mem/intune/apps/apps-add>

NEW QUESTION: 82

Your network contains an on-premises Active Directory domain that is synced to Microsoft Azure Active Directory (Azure AD) as shown in the following two exhibits.

You create a user named User1 in Active Directory as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

The Azure AD Attributes page shows which attributes will be synchronized based on the Office 365 services you are using (Exchange, SharePoint etc). We can see that ExtensionAttribute10 and ExtensionAttribute11 have been deselected.

The Directory Extensions page shows which additional attributes will be synchronized (additional to the list in the Azure AD Attributes page).

ExtensionAttribute1:

Will be synchronized because it is ticked in the Azure AD Attributes page.

ExtensionAttribute10.

Will be synchronized because although it is unticked in the Azure AD Attributes page, it is added again in the Directory Extensions page.

ExtensionAttribute11.

Will not be synchronized because it is unticked in the Azure AD Attributes page and it is not added again in the Directory Extensions page.

ExtensionAttribute12:

Will be synchronized because it is ticked in the Azure AD Attributes page. It is also added again in the Directory Extensions page but this will have no effect as it is already ticked in the Azure AD Attributes page.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-feature-directory-extensions>

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom>

NEW QUESTION: 83

You are configuring an enterprise application named TestApp in Microsoft Azure as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

References:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-configure-hard-coded-link>

NEW QUESTION: 84

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.

Solution: From the Azure Active Directory admin center, you create a trusted location and a conditional access policy.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

Explanation

Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition>

<https://techcommunity.microsoft.com/t5/Microsoft-SharePoint-Blog/Conditional-Access-in-SharePoint-Onlinean>

NEW QUESTION: 85

You have a Microsoft 365 subscription.

You need to provide an administrator named Admin1 with the ability to place holds on mailboxes, SharePoint Online sites, and OneDrive for Business locations. The solution must use the principle of least privilege.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/permissions-in-the-security-and-compliance-cent>

NEW QUESTION: 86

You implement Microsoft Azure Advanced Threat Protection (Azure ATP).

You have an Azure ATP sensor configured as shown in the following exhibit.

Updates

How long after the Azure ATP cloud service is updated will the sensor update?

A. 1 hour

B. 7 days

C. 48 hours

D. 12 hours

E. 72 hours

Answer: E (LEAVE A REPLY)

Explanation

References:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-whats-new> The exhibit shows that the sensor is configured for Delayed update.

Given the rapid speed of ongoing Azure ATP development and release updates, you may decide to define a subset group of your sensors as a delayed update ring, allowing for a gradual sensor update process. Azure ATP enables you to choose how your sensors are updated and set each sensor as a Delayed update candidate.

Sensors not selected for delayed update are updated automatically, each time the Azure ATP service is updated. Sensors set to Delayed update are updated on a delay of 72 hours, following the official release of each service update.

Reference:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/sensor-update>

NEW QUESTION: 87

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.

Solution: From the Device Management admin center, you add a trusted location and compliance policy.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Explanation

Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access.

<https://techcommunity.microsoft.com/t5/Microsoft-SharePoint-Blog/Conditional-Access-in-SharePoint-Onlinean>

NEW QUESTION: 88

You are developing an interactive invoicing application that will be used by end users. The application will have the following features:

- * Save invoices generated by a user to the user's OneDrive for Business.
- * Email daily automated reminders.

You need to identify which permissions to grant for the application features. The solution must use the principle of least privilege. Which permission type should you grant for each feature? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 89

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

You need to ensure that all the users in your organization are prompted to change their password every 60 days. The solution must ensure that the users are reminded that their password must be changed 10 days before the required change.

To answer, sign in to the Microsoft 365 portal.

Answer:

See explanation below.

Explanation

You need to configure the Password Expiration Policy.

1. Sign in to the Microsoft 365 Admin Center.
2. In the left navigation pane, expand the Settings section then select the Settings option.
3. Click on Security and Privacy.
4. Select the Password Expiration Policy.
5. Ensure that the checkbox labelled "Set user passwords to expire after a number of days" is ticked.
6. Enter 60 in the "Days before passwords expire" field.
7. Enter 10 in the "Days before a user is notified about expiration" field.
8. Click the 'Save changes' button.

NEW QUESTION: 90

You have a Microsoft 365 subscription.

From the Microsoft 365 admin center, you open the Microsoft 365 Apps usage report as shown in the following exhibit.

You need ensure that the report meets the following requirements:

- * The Username column must display the actual name of each user.
- * Usage of the Microsoft Teams mobile app must be displayed.

What should you modify for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 91

Your company has offices in several cities and 100.000 users.

The network contains an Active Directory domain contoso.com.

You purchase Microsoft 365 and plan to deploy several Microsoft 365 services.

You are evaluating the implementation of pass-through authentication and seamless SSO. Azure AD Connect will NOT be in staging mode.

You need to identify the redundancy limits for the planned implementation.

What should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Azure AD Connect can be active on only one server. You can install Azure AD Connect on another server for redundancy but the additional installation would need to be in Staging

mode. An Azure AD connect installation in Staging mode is configured and ready to go but it needs to be manually switched to Active to perform directory synchronization.

Azure authentication agents can be installed on as many servers as you like.

NEW QUESTION: 92

Your organization has an on-premises Microsoft Exchange Server 2016 organization. The organization is in the company's main office in Melbourne. The main office has a low-bandwidth connection to the Internet.

The organization contains 250 mailboxes.

You purchase a Microsoft 365 subscription and plan to migrate to Exchange Online next month.

In 12 months, you plan to increase the bandwidth available for the Internet connection.

You need to recommend the best migration strategy for the organization. The solution must minimize administrative effort.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal.

Select the BEST answer.

- A. network upload
- B. cutover migration
- C. hybrid migration
- D. staged migration

Answer: C (LEAVE A REPLY)

Explanation

With a hybrid migration, you can migrate the mailboxes in small batches over a period of time which will help to avoid saturating the bandwidth. With the migration wizard, you can configure a migration batch to start outside office hours which would minimize bandwidth usage during office hours.

With a hybrid migration, you do not need to reconfigure Outlook to connect to the migrated mailbox. Outlook will automatically detect the new mailbox location. This reduces administrative effort.

Reference:

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/mailbox-migration>

NEW QUESTION: 93

You need to recommend the development environment and tools for the development of SalesApp.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Graphical user interface, text, application Description automatically generated

Box 1: Office Add-ins

Scenario: SalesApp must be integrated with Microsoft Word and must combine images and text from multiple sources to create a quotation as a DOCX file.

You can use the Office Add-ins platform to build solutions that extend Office applications and interact with content in Office documents.

Box 2: Microsoft Visual Studio

Visual Studio can be used to create Office Add-ins for Excel, Outlook, Word, and PowerPoint. An Office Add-in project gets created as part of a Visual Studio solution and uses HTML, CSS, and JavaScript.

Box 3: Fluent UI

Fluent UI is the upcoming and continually evolving design system for Microsoft 365.

Currently, there is an ongoing merge in the process to have one consistent UI Framework across the Microsoft ecosystem.

Reference:

<https://docs.microsoft.com/en-us/office/dev/add-ins/overview/office-add-ins>

<https://n8d.at/5-reasons-or-thoughts-on-fluent-ui-web>

NEW QUESTION: 94

You need to configure just in time access to meet the technical requirements.

What should you use?

A. access reviews

B. entitlement management

C. Azure Active Directory (Azure AD) Privileged Identity Management (PIM)

D. Azure Active Directory (Azure AD) Identity Protection

Answer: C (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/privileged-identity-management/pim-configure> joergsi 5 months, 1 week ago Privileged access management
The effectiveness of an information protection strategy depends on how secure the administrative accounts used to manage that strategy are. If accounts that can be used to configure and manage an information protection strategy are not properly secured, then the information protection strategy itself can be easily compromised.

Privileged access management enables you to configure policies that apply => just-in-time administrative principles to sensitive administrative roles.

For example, if someone needs temporary access to configure an information protection policy, that person would need to go through an approval process to obtain the necessary set of rights instead of having an Azure Active Directory (Azure AD) account with those rights permanently assigned.

Thomas, Orin. Exam Ref MS-100 Microsoft 365 Identity and Services (S.10). Pearson Education.

Kindle-Version.

NEW QUESTION: 95

Your network contains an on-premises Active Directory domain named conioso.com.

for all user accounts, the Logon Hours settings are configured to prevent sign-ins outside of business hours You plan to sync contoso.com to an Azure Active Directory (Azure AD) tenant You need to recommend a solution to ensure that the logon hour restrictions apply when synced users sign in to Azure AD.

What should you include in the recommendation?

- A. password synchronization
- B. Azure AD identity Protection policies
- C. pass-Through authentication
- D. conditional access policies

Answer: C (LEAVE A REPLY)

NEW QUESTION: 96

Your network contains an Active Directory domain and a Microsoft Azure Active Directory (Azure AD) tenant.

The network uses a firewall that contains a list of allowed outbound domains.

You began to implement directory synchronization.

You discover that the firewall configuration contains only the following domain names in the list of allowed domains:

* *.microsof.com

* *.office.com

Directory synchronization fails.

You need to ensure that directory synchronization completes successfully.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From the firewall, allow the IP address range of the Azure data center for outbound communication.
- B. From Azure AD Connect, modify the Customize synchronization options task
- C. Deploy an Azure AD Connect sync server in staging mode.
- D. From the firewall, create a list of allowed inbound domains.
- E. From the firewall, modify the list of allowed outbound domains.

Answer: ([SHOW ANSWER](#))

Explanation

Azure AD Connect needs to be able to connect to various Microsoft domains such as login.microsoftonline.com. Therefore, you need to modify the list of allowed outbound domains on the firewall.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/reference-connect-ports>

NEW QUESTION: 97

Your network contains an Active Directory domain named fabrikam.com. The domain contains the objects shown in the following table.

The group have the members shown in the following table.

You are configure synchronization between fabrikam.com and a Microsoft Azure Active Director (Azure AD) tenant.

You configure the domain/OU Filtering settings in Azure AD Connect as shown in the Domain>OU Filtering exhibit. (Click the Domain/OU Filtering tab.) You configure the Filtering in Azure Connect as shown in the Filtering exhibit. (Click the Filtering tab.) NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: No

The filtering is configured to synchronize Group2 and OU2 only. The effect of this is that only members of Group2 who are in OU2 will be synchronized.

User2 is in Group2. However, the User2 account object is in OU1 so User2 will not synchronize to Azure AD.

Box 2: Yes

Group2 is in OU2 so Group2 will synchronize to Azure AD. However, only members of the group who are in OU2 will synchronize. Members of Group2 who are in OU1 will not synchronize.

Box 3: Yes

User3 is in Group2 and in OU2. Therefore, User3 will synchronize to Azure AD.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering#group-b>

NEW QUESTION: 98

You have a Microsoft 365 subscription.

You need to be notified to your personal email address when a Microsoft Exchange Online service issue occurs.

What should you do?

- A.** From the Exchange admin center create a contact.
- B.** From the Microsoft Outlook client configure an Inbox rule.
- C.** From the Microsoft 365 admin center, customize the Service health settings.
- D.** From the Microsoft 365 admin center, update the technical contact details

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 99

You have an on premises web application that is published by using a URL of <https://app.contoso.local>.

You purchase a Microsoft 365 subscription.

Several external users must be able to connect to the web application

You need to recommend a solution for external access to the application. The solution must support multi-factor authentication.

Which two actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A.** From an on-premises server, install a connector, and then publish the app.
- B.** From the Azure Active Directory admin center, enable an Application Proxy.
- C.** From the Azure Active Directory admin center, treat a conditional access policy.
- D.** From an on premises server, install an Authentication Agent.
- E.** Republish the web-application by using <http://app.contoso.com>

Answer: **A,B** ([LEAVE A REPLY](#))

Explanation

Azure Active Directory (Azure AD) has an Application Proxy service that enables users to access on-premises applications by signing in with their Azure AD account. The application proxy enables you to take advantage of Azure AD security features like Conditional Access and Multi-Factor Authentication.

To use Application Proxy, install a connector on each Windows server you're using with the Application Proxy service. The connector is an agent that manages the outbound connection from the on-premises application servers to Application Proxy in Azure AD.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-add-on-premises-applica>

NEW QUESTION: 100

Your network contains an Active Directory domain named .Ki.ituin.com that is synced to Microsoft Azure Active Directory (Azure AD).

The domain contains 100 user accounts.

The city attribute for all the users is set to the city where the user resides.

You need to modify the value of the city attribute to the three letter airport code of each city.

What should you do?

A. from Active Directory Administrative Center, select the Active Directory users, and then modify the Property settings.

B From the Microsoft 365 admin center, select the users, and then use the Bulk actions option.

B. From Azure Cloud Shell, run the Get-AzureADUsers, and then use the Bulk actions option.

C. From Azure Cloud Shell, run the Get-AzureADUser and set-AzureADUser cmdlets.

D. From Windows PowerShell on a domain controller, run the Get-AzureADUser and Set-AzureADUser cmdlets.

Answer: C (LEAVE A REPLY)

Explanation

The user accounts are synced from the on-premise Active Directory to the Microsoft Azure Active Directory (Azure AD). Therefore, the city attribute must be changed in the on-premise Active Directory.

You can use Windows PowerShell on a domain controller and run the Get-ADUser cmdlet to get the required users and pipe the results into Set-ADUser cmdlet to modify the city attribute.

Reference:

<https://docs.microsoft.com/en-us/powershell/module/addsadministration/set-aduser?view=win10-ps>

NEW QUESTION: 101

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@M365x981607.onmicrosoft.com

Microsoft 365 Password: *yfLo7lr2&y-

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

Your organization plans to open an office in New York, and then to add 100 users to the office. The city attribute for all new users will be New York.

You need to ensure that all the new users in the New York office are licensed for Microsoft Office 365 automatically.

Answer:

See explanation below.

Explanation

You need create a dynamic group based on the city attribute. You then need to assign a license to the group.

User accounts with the city attribute set to 'New York will automatically be added to the group. Anyone who is added to the group will automatically be assigned the license that is assigned to the group.

1. Go to the Azure Active Directory admin center.
2. Select Azure Active Directory then select Groups.
3. Click on the New Group link.
4. Give the group a name such as New York Users.
5. Select Users as the membership type.
6. Select 'Add dynamic query'.
7. Select 'City' in the Property drop-down box.
8. Select 'Equals' in the Operator drop-down box.

9. Enter 'New York' as the Value. You should see the following text in the Expression box:
user.city -eq "New York"
10. Click Save to create the group.
11. In the Groups list, select the new group to open the properties page for the group.
12. Select 'Licenses'.
13. Select the '+ Assignments' link.
14. Tick the box to select the license.
15. Click the Save button to save the changes.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/groups-dynamic-membership>

NEW QUESTION: 102

You have a Microsoft 365 tenant that contains Microsoft Exchange Online.

You plan to enable calendar sharing with a partner organization named adatum.com. The partner organization also has a Microsoft 365 tenant.

You need to ensure that the calendar of every user is available to the users in adatum.com immediately.

What should you do?

- A. From the Exchange admin center, create a sharing policy.
- B. From the Exchange admin center, create a new organization relationship
- C. From the Microsoft 365 admin center, modify the Organization profile settings.
- D. From the Microsoft 365 admin center, configure external site sharing.

Answer: B (LEAVE A REPLY)

Explanation

You need to set up an organization relationship to share calendar information with an external business partner. Office 365 admins can set up an organization relationship with another Office 365 organization or with an Exchange on-premises organization.

Reference:

<https://docs.microsoft.com/en-us/exchange/sharing/organization-relationships/create-an-organization-relationship>

NEW QUESTION: 103

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain.

You deploy a Microsoft Azure Active Directory (Azure AD) tenant.

Another administrator configures the domain to synchronize to Azure AD.

You discover that 10 user accounts in an organizational unit (OU) are NOT synchronized to Azure AD. All the other user accounts synchronized successfully.

You review Azure AD Connect Health and discover that all the user account synchronizations completed successfully.

You need to ensure that the 10 user accounts are synchronized to Azure AD.

Solution: From Azure AD Connect, you modify the filtering settings.

Does this meet the goal?

A. Yes

B. No

Answer: ([SHOW ANSWER](#))

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering>

NEW QUESTION: 104

Your network contains an on-premises Active Directory domain named contoso.com that syncs to Azure Active Directory (Azure AD).

You have users in contoso.com as shown in the following table.

The users have the passwords shown in the following table.

You implement password protection as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: No

User1's password contains the banned password 'Contoso'. However, User1 will not be required to change his password at next sign in. When the password expires or when User1 (or an administrator) changes the password, the password will be evaluated and will have to meet the password requirements.

Box 2: Yes

Password evaluation goes through several steps including normalization and Substring matching which is used on the normalized password to check for the user's first and last name as well as the tenant name.

Normalization is the process of converting common letter substitutes into letters. For example, 0 converts to o.

\$ converts to s. etc.

The next step is to identify all instances of banned passwords in the user's normalized new password. Then:

- * Each banned password that is found in a user's password is given one point.
- * Each remaining unique character is given one point.
- * A password must be at least five (5) points for it to be accepted.

'C0nt0s0' becomes 'contoso' after normalization. Therefore, C0nt0s0_C0mplex123 contains one instance of the banned password (contoso) so that equals 1 point. After 'contoso', there are 11 unique characters.

Therefore, the score for 'C0nt0s0_C0mplex123' is 12. This is more than the required 5 points so the password is acceptable.

Box 3:

The 'Password protection for Windows Server Active Directory' is in 'Audit' mode. This means that the password protection rules are not applied. Audit mode is for logging policy violations before putting the password protection 'live' by changing the mode to 'enforced'.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad>

NEW QUESTION: 105

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains the users shown in the following table.

You need to identify which users can perform the following administrative tasks:

- * Reset the password of User4.
- * Modify the value for the manager attribute of User4.

Which users should you identify for each task? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1:

A Password Administrator or a User Administrator can reset the password non-administrative users.

Box 2: A User Administrator can configure other attributes such as the Manager attribute of non-administrative users.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory-assign-admin-roles>

NEW QUESTION: 106

Your company has a Microsoft 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You use Reports from the Microsoft Purview compliance portal.

Does this meet the goal?

A. Yes

B. No

Answer: B ([LEAVE A REPLY](#))

Valid MS-100 Dumps shared by Actual4test.com for Helping Passing MS-100 Exam! NEW QUESTION: 107

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy several Microsoft Office 365 services.

You need to design an authentication strategy for the planned deployment. The solution must meet the following requirements:

- * Users must be able to authenticate during business hours only.
- * Authentication requests must be processed successfully if a single server fails.
- * When the password for an on-premises user account expires, the new password must be enforced the next time the user signs in.
- * Users who connect to Office 365 services from domain-joined devices that are connected to the internal network must be signed in automatically.

Solution: You design an authentication strategy that uses password hash synchronization and seamless SSO.

The solution contains two servers that have an Authentication Agent installed.

A. Yes

B. No

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 108

Your company uses on-premises Windows Server File Classification Infrastructure (FCI). Some documents on the on-premises file servers are classified as Confidential. You migrate the files from the on-premises file servers to Microsoft SharePoint Online. You need to ensure that you can implement data loss prevention (DLP) policies for the uploaded files based on the Confidential classification.

What should you do first?

- A. From the SharePoint admin center, create a managed property.
- B. From the SharePoint admin center, configure hybrid search.
- C. From the Security & Compliance Center PowerShell, run the `New-DlpComplianceRule` cmdlet.
- D. From the Security & Compliance Center PowerShell, run the `New-DataClassification` cmdlet.

Answer: ([SHOW ANSWER](#))

Explanation

Your organization might use Windows Server FCI to identify documents with personally identifiable information (PII) such as social security numbers, and then classify the document by setting the Personally Identifiable Information property to High, Moderate, Low, Public, or Not PII based on the type and number of occurrences of PII found in the document. In Office 365, you can create a DLP policy that identifies documents that have that property set to specific values, such as High and Medium, and then takes an action such as blocking access to those files.

Before you can use a Windows Server FCI property or other property in a DLP policy, you need to create a managed property in the SharePoint admin center.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/protect-documents-that-have-fci-or-other-properties>

NEW QUESTION: 109

You need to create the UserLicenses group. The solution must meet the security requirements.

Which group type and control method should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Fabrikam plans to create a group named UserLicenses that will manage the allocation of all Microsoft 365 bulk licenses.

The memberships of UserLicenses must be validated monthly. Unused user accounts must be removed from the group automatically.

The group needs to be a Security group.

Azure Active Directory (Azure AD) access reviews enable organizations to efficiently manage group memberships, access to enterprise applications, and role assignments. User's access can be reviewed on a regular basis to make sure only the right people have continued access.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/governance/access-reviews-overview>

NEW QUESTION: 110

You have a Microsoft SharePoint Online site and an on-premises file server.

The site contains the files shown in the following table.

The file server contains the files shown in the following table.

You migrate D:\Folder1 and D:\Folder2 to the Documents library by using the SharePoint Migration Tool as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

You can't have two files with the same name and extension in a SharePoint documents library. If a file on the source server has the same name and extension as an existing file in the document library, this will cause a conflict.

The options for dealing with a conflict are: Skip, Merge, or Overwrite.

The "Keep all versions" setting in the exhibit is used to retain the file history for a migrated file. It does not create multiple versions of a file in a document library.

Box 1: No

File1.docx exists in the document library so this will cause a conflict.

Box 2: No

Migrating two File2.xlsx files will cause a conflict.

Box 3: Yes

There is only one File3.pptx in the source server and none in the document library so there will be no conflict.

NEW QUESTION: 111

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to

you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to migrate data from an on-premises email system to your Microsoft 365 tenant.

You need to ensure that Debra Berger can import a PST file.

Answer:

See explanation below.

Explanation

Debra will need the Mailbox Import Export and Mail Recipients roles to be able to import PST files. These roles cannot be assigned directly to a user account. The way to assign just those two roles to a user is to create a new role group, assign the roles to the role group and add the user as a member.

1. Go to the Exchange admin center.
2. Select Permissions.
3. In the Admin roles section, click the plus (+) sign to create a new role.
4. Give the role group a name such as PST Import.
5. In the roles section, click the plus (+) sign.
6. Select the Mailbox Import Export and Mail Recipients roles and click Add to add the roles.

7. In the Members section, click the plus (+) sign.
8. Select Debra Berger then click Add then Ok to add Debra as a member of the new role group.
9. Click the Save button to save the new role group.

NEW QUESTION: 112

You need to meet the application requirement for App1.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A.** From the Azure Active Directory admin center, configure the application URL settings.
- B.** From the Azure Active Directory admin center, add an enterprise application.
- C.** On an on-premises server, download and install the Microsoft AAD Application Proxy connector.
- D.** On an on-premises server, install the Hybrid Configuration wizard.
- E.** From the Microsoft 365 admin center, configure the Software download settings.

Answer: A,B,C (LEAVE A REPLY)

Explanation

* An on-premises web application named App1 must allow users to complete their expense reports online.

Application Proxy is a feature of Azure AD that enables users to access on-premises web applications from a remote client. Application Proxy includes both the Application Proxy service which runs in the cloud, and the Application Proxy connector which runs on an on-premises server. Azure AD, the Application Proxy service, and the Application Proxy connector work together to securely pass the user sign-on token from Azure AD to the web application.

In this question, we need to add an enterprise application in Azure and configure a Microsoft AAD Application Proxy connector to connect to the on-premises web application (App1).

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy#how-application-proxy->

NEW QUESTION: 113

You have a Microsoft 365 subscription.

All users have their email stored in Microsoft Exchange Online

In the mailbox of a user named User, you need to preserve a copy of all the email messages that contain the word ProjectX.

What should you do first?

- A.** From the Exchange admin center, start a mail flow message trace.
- B.** From the Security & Compliance admin center, start a message trace.

C. From the Security & Compliance admin center, create a label and label policy.

D. From the Exchange admin center, create a mail flow rule.

Answer: C (LEAVE A REPLY)

Explanation

When you configure conditions for a label, you can automatically assign a label to a document or email. In this case, we would create a label to label all email messages that contain the word ProjectX. We would then create a label policy to preserve a copy of all message that have the label assigned.

NEW QUESTION: 114

You have a Microsoft 365 tenant that contains a Microsoft Power Platform environment. You need to ensure that only specific users can create new environments.

What should you do in the Power Platform admin center?

A. From Data policies, create a new data policy.

B. From Data integration, create a new connection set.

C. From Power Platform settings, modify the Governance settings for the environment.

D. From Environments, modify the behaviour settings for the default environment.

Answer: C (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/control-environment-creation>

NEW QUESTION: 115

Your company has a Microsoft 365 subscription that contains the following domains:

Contoso.onmicrosoft.com

Contoso.com

You plan to add the following domains to Microsoft 365 and to use them with Exchange Online:

* Sub1.contoso.onmicrosoft.com

* Sub2.contoso.com

* Fabrikam.com

You need to identify the minimum number of DNS records that must be added for Exchange Online to receive inbound email messages for the three domains.

How many DNS records should you add? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: 2

You don't need to verify Sub1.contoso.onmicrosoft.com because the onmicrosoft.com domain and DNS is managed by Microsoft. You also don't need to configure an MX record for Sub1.contoso.onmicrosoft.com because that will be done by Microsoft.

For sub2.contoso.com, you don't need to verify the domain because you have already verified its parent domain contoso.com. However, you do need an MX record to direct email for that domain to Exchange Online.

For Fabrikam.com, you will need to verify the domain. You will need an MX record to direct email for that domain to Exchange Online.

Box 2: 0

You 'should' create CNAME records for autodiscover to point your email clients to Exchange Online to connect to the mailboxes. However, you don't have to. You could configure the email client manually.

Therefore, the minimum number of CNAME records required is zero.

NEW QUESTION: 116

You are developing a mobile application that will display the current signed-in user's display name and the application settings. The application settings are stored as a Microsoft Graph extension of the user profile.

Users of the application have intermittent network connectivity

You need to retrieve the least amount of data by using a single REST request. The solution must minimize network traffic.

Which URI should you use to retrieve the data?

A. [https://graph.microsoft.com/v1.0/me?Select=displayName,idi\\$expand=extensions](https://graph.microsoft.com/v1.0/me?Select=displayName,idi$expand=extensions)

B. [https://graph.microsoft.com/v1.0/me?select=displayName,userType\\$expand=extensions](https://graph.microsoft.com/v1.0/me?select=displayName,userType$expand=extensions)

C. <https://graph.microsoft.com/v1.0/me?Expend=extensions>

D. <https://graph.microsoft.com/v1.0/me>

Answer: D (LEAVE A REPLY)

NEW QUESTION: 117

You have a DNS zone named contoso.com that contains the following records.

You purchase a Microsoft 365 subscription.

You plan to migrate mailboxes to Microsoft Exchange Online.

You need to configure Sender Policy Framework (SPF) to support Exchange Online.

What should you do?

A. Add an additional TXT record.

B. Modify the TXT record.

C. Modify the expire interval of the SOA record.

D. Modify the default TTL of the SOA record.

Answer: B (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/set-up-spf-in-office-365-to-help-pre>

NEW QUESTION: 118

You have a Microsoft 365 subscription that contains the users shown in the following table.

The subscription contains the groups shown in the following table.

You deploy an app as shown in the following exhibit

For each of the following statements, select Yes if the statement is true. Otherwise select No.

Answer:

Explanation

NEW QUESTION: 119

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to assign User2 the required roles to meet the security requirements.

Solution: From the Office 365 admin center, you assign User2 the Security Reader role.

From the Exchange admin center, you assign User2 the Help Desk role.

Does this meet the goal?

A. Yes

B. NO

Answer: B (LEAVE A REPLY)

Explanation

* User2 must be able to view reports and schedule the email delivery of security and compliance reports.

The Security Reader role can view reports but not schedule the email delivery of security and compliance reports.

The Help Desk role cannot schedule the email delivery of security and compliance reports.

Reference:

<https://docs.microsoft.com/en-us/exchange/permissions-exo/permissions-exo>

NEW QUESTION: 120

You have a Microsoft 365 tenant that contains a Microsoft SharePoint Online site named Projects. You need to get a list of documents in the Documents library by using the Microsoft Graph API. How should you complete the query? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 121

You need to configure the Office 365 service status notifications and limit access to the service and feature updates. The solution must meet the technical requirements.

What should you configure in the Microsoft 365 admin center? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Graphical user interface, text, table Description automatically generated

Reference:

NEW QUESTION: 122

You have a new Microsoft 365 subscription.

A user named User1 has a mailbox in Microsoft Exchange Online.

You need to log any changes to the mailbox folder permissions of User1.

Which command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

To enable auditing for a single mailbox (in this example, belonging to Holly Sharp), use this PowerShell command: Set-Mailbox username -AuditEnabled \$true References:

<https://support.microsoft.com/en-us/help/4026501/office-auditing-in-office-365-for-admins>

<https://docs.microsoft.com/en-us/powershell/module/exchange/mailboxes/set-mailbox?view=exchange-ps>

NEW QUESTION: 123

On March 5, 2022, you create an access package named Package1 that has the following settings:

- * Resource roles
- * Name: Group1
- * Type: Group and Team
- * Role: Member
- * Lifecycle

o Access package assignments expire: On date of Assignment expiration date: March 20, 2022
On March 5, 2022, you assign Package1 to the guest users shown in the following table.

On March 6, 2022, you assign the Reports reader role to Guest3.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 124

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant.

Solution: You use Reports from the Microsoft 365 compliance center.

Does this meet the goal?

A. Yes

B. No

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 125

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some

question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You deploy Microsoft 365.

You plan to implement directory synchronization.

You need to recommend a security solution for the synchronized identities. The solution must meet the following requirements:

- * Users must be able to authenticate successfully to Microsoft 365 services if Active Directory becomes

- * unavailable.

- * Users passwords must be 10 characters or more.

Solution: Implement pass-through authentication and configure password protection in the Azure AD tenant.

Does this meet the goal?

A. Yes

B. No

Answer: B (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-password-hash-synchronization>

NEW QUESTION: 126

You need to ensure that Litware has the appropriate licence to support the planned changes. The solution must minimize costs. Which license type should you use?

A. Microsoft 365 Enterprise E3

B. Office 365 Enterprise F3

C. Office 365 Enterprise E5

D. Microsoft 365 Enterprise E5

Answer: C (LEAVE A REPLY)

NEW QUESTION: 127

You have a Microsoft 365 subscription that uses a default domain named contoso.com.

The domain contains the users shown in the following table.

The domain contains conditional access policies that control access to a cloud app named App1. The policies are configured as shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: Yes.

User1 is in a group named Compliant. All the conditional access policies apply to Group1 so they don't apply to User1.

As there is no conditional access policy blocking access for the group named Compliant, User1 is able to access App1 using any device.

Box 2: Yes.

User2 is in Group1 so Policy1 applies first. Policy1 excludes compliant devices and Device1 is compliant.

Therefore, Policy1 does not apply so we move on to Policy2.

User2 is also in Group2. Policy2 excludes Group2. Therefore, Policy2 does not apply so we move on to Policy3.

Policy3 applies to Group1 so Policy3 applies to User2. Policy3 applies to 'All device states' so Policy3 applies to Device1. Policy3 grants access. Therefore, User2 can access App1 using Device1.

Box 3: No.

User2 is in Group1 so Policy1 applies. Policy1 excludes compliant devices but Devices is non-compliant.

Therefore, User2 cannot access App1 from Device2.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/plan-conditional-access>

NEW QUESTION: 128

You have a Microsoft 365 E5 subscription that contains an Azure Active Directory (Azure AD) tenant named contoso.com. The tenant contains a Microsoft SharePoint Online site named Site1 and the accounts shown in the following table.

You have an on-premises server named Server1 that contains a folder named Folder1.

Folder1 contains the files shown in the following table.

The User1, User2, and Group1 accounts have the security identifiers (SIDs) shown in the following table.

You use the SharePoint Migration Tool to migrate Folder1 to Site1. You preserve the file share permissions and use the following user mapping file.

S-1-5-21-4534338-1127018997-2609994386-1304, UserA@Contoso.com, FALSE

S-1-5-21-4534338-1127018997-2609994386-1228, UserB@Contoso.com, FALSE

S-1-5-21-4534338-1127018997-2609994386-1106, GroupA, TRUE

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point

Answer:

Explanation

NEW QUESTION: 129

You have a Microsoft 365 subscription that uses an Azure Active Directory (Azure AD) tenant named contoso.com.

A temporary employee at your company uses an email address of user1@outlook.com.

You need to ensure that the temporary employee can sign in to contoso.com by using the user1@outlook.com account.

What should you do?

- A. From the Azure Active Directory admin center, create a new user.
- B. From the Microsoft 365 admin center, create a new contact.
- C. From the Azure Active Directory admin center, create a new guest user.
- D. From the Microsoft 365 admin center, create a new user.

Answer: C (LEAVE A REPLY)

Explanation

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

NEW QUESTION: 130

You have a Microsoft 365 subscription.

You need to prevent phishing email messages from being delivered to your organization.

What should you do?

- A. From the Exchange admin center, create an anti-malware policy.
- B. From Security & Compliance, create a DLP policy.
- C. From Security & Compliance, create a new threat management policy.
- D. From the Exchange admin center, create a spam filter policy.

Answer: C (LEAVE A REPLY)

Explanation

Anti-phishing protection is part of Office 365 Advanced Threat Protection (ATP). To prevent phishing email messages from being delivered to your organization, you need to configure a threat management policy.

ATP anti-phishing is only available in Advanced Threat Protection (ATP). ATP is included in subscriptions, such as Microsoft 365 Enterprise, Microsoft 365 Business, Office 365 Enterprise E5, Office 365 Education A5, etc.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/set-up-anti-phishing-policies>

NEW QUESTION: 131

You have a Microsoft 365 subscription.

You recently configured a Microsoft SharePoint Online tenant in the subscription.

You plan to create an alert policy.

You need to ensure that an alert is generated only when malware is detected in more than five documents stored in SharePoint Online during a period of 10 minutes.

What should you do first?

A. Enable Microsoft Office 365 Cloud App Security.

B. Deploy Windows Defender Advanced Threat Protection (Windows Defender ATP).

C. Enable Microsoft Office 365 Analytics.

Answer: B (LEAVE A REPLY)

Explanation

An alert policy consists of a set of rules and conditions that define the user or admin activity that generates an alert, a list of users who trigger the alert if they perform the activity, and a threshold that defines how many times the activity has to occur before an alert is triggered.

In this question, we would use the "Malware detected in file" activity in the alert settings then configure the threshold (5 detections) and the time window (10 minutes).

The ability to configure alert policies based on a threshold or based on unusual activity requires Advanced Threat Protection (ATP).

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/alert-policies>

NEW QUESTION: 132

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that includes the users shown in the following table.

Group2 is a member of Group1.

You assign a Microsoft Office 365 Enterprise E3 license to Group1.

You need to identify how many Office 365 E3 licenses are assigned.

What should you identify?

A. 1

B. 2

C. 3

D. 4

Answer: C (LEAVE A REPLY)

Explanation

Group-based licensing currently does not support groups that contain other groups (nested groups). If you apply a license to a nested group, only the immediate first-level user

members of the group have the licenses applied. Therefore, User2 will not be assigned a license.

When Azure AD assigns group licenses, any users without a specified usage location inherit the location of the directory. Therefore, User3 will be assigned a license and his usage location will be set to the location of the directory.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-group-advanced>

NEW QUESTION: 133

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).

Currently, App1 can read user profile information

You need to allow App1 to read the user's calendar.

Solution: From the Azure portal, edit the API permission list for App1. Add the Microsoft Graph API and the Calendars-Read permissions and then grant tenant admin consent.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

NEW QUESTION: 134

You have a Microsoft 365 subscription that contains an Azure Active Directory (Azure AD) tenant named contoso.com.

Corporate policy states that user passwords must not include the word Contoso.

What should you do to implement the corporate policy?

A. From the Azure Active Directory admin center, configure the Password protection settings.

B. From the Microsoft 365 admin center, configure the Password policy settings.

C. From Azure AD Identity Protection, configure a sign-in risk policy.

D. From the Azure Active Directory admin center, create a conditional access policy.

Answer: A (LEAVE A REPLY)

Explanation

The Password protection settings allows you to specify a banned password list of phrases that users cannot use as part of their passwords.

References:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-on-premisesope>

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-ban-bad-configure>

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad#custombanned>

NEW QUESTION: 135

You need to prepare the environment for Project1.

You create the Microsoft 365 tenant.

Which three actions should you perform in sequence next? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation

Fabrikam plans to implement a Microsoft 365 Enterprise subscription and move all email and shared documents to the subscription.

All users must be able to exchange email messages successfully during Project1 by using their current email address.

After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.

This configuration requires a hybrid Exchange configuration during the pilot phase. This means that you will have mailboxes hosted in Exchange Online and mailboxes hosted in Exchange on-premise.

The first steps to configure Exchange hybrid are to Create the Azure AD tenant, add the Fabrikam.com domain as a custom domain, then configure directory synchronization to replicate the on-prem Active Directory user accounts to Azure Active Directory.

Reference:

<https://docs.microsoft.com/en-us/exchange/exchange-hybrid>

Topic 1, Fabrikam, Inc

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answer and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. When you are ready to answer a question, click the Question button to return to the question.

Overview

Fabrikam, Inc. is an electronics company that produces consumer products. Fabrikam has 10,000 employees worldwide.

Fabrikam has a main office in London and branch offices in major cities in Europe, Asia, and the United States.

Existing Environment

Active Directory Environment

The network contains an Active Directory forest named fabrikam.com. The forest contains all the identities used for user and computer authentication.

Each department is represented by a top-level organizational unit (OU) that contains several child OUs for user accounts and computer accounts.

All users authenticate to on-premises applications by signing in to their device by using a UPN format of username@fabrikam.com.

Fabrikam does NOT plan to implement identity federation.

Network Infrastructure

Each office has a high-speed connection to the Internet.

Each office contains two domain controllers. All domain controllers are configured as a DNS server.

The public zone for fabrikam.com is managed by an external DNS server.

All users connect to an on-premises Microsoft Exchange Server 2016 organization. The users access their email by using Outlook Anywhere, Outlook on the web, or the Microsoft Outlook app for iOS. All the Exchange servers have the latest cumulative updates installed.

All shared company documents are stored on a Microsoft SharePoint Server farm.

Requirements

Planned Changes

Fabrikam plans to implement a Microsoft 365 Enterprise subscription and move all email and shared documents to the subscription.

Fabrikam plans to implement two pilot projects:

* Project1: During Project1, the mailboxes of 100 users in the sales department will be moved to Microsoft 365.

* Project2: After the successful completion of Project1, Microsoft Teams & Skype for Business will be enabled in Microsoft 365 for the sales department users.

Fabrikam plans to create a group named UserLicenses that will manage the allocation of all Microsoft 365 bulk licenses.

Technical Requirements

Fabrikam identifies the following technical requirements:

- * All users must be able to exchange email messages successfully during Project1 by using their current email address.
- * Users must be able to authenticate to cloud services if Active Directory becomes unavailable.
- * A user named User1 must be able to view all DLP reports from the Microsoft 365 admin center.
- * Microsoft Office 365 ProPlus applications must be installed from a network share only.
- * Disruptions to email address must be minimized.

Application Requirements

Fabrikam identifies the following application requirements:

- * An on-premises web application named App1 must allow users to complete their expense reports online.
- * The installation of feature updates for Office 365 ProPlus must be minimized.

Security Requirements

Fabrikam identifies the following security requirements:

- * After the planned migration to Microsoft 365, all users must continue to authenticate to their mailbox and to SharePoint sites by using their UPN.
- * The memberships of UserLicenses must be validated monthly. Unused user accounts must be removed from the group automatically.
- * After the planned migration to Microsoft 365, all users must be signed in to on-premises and cloud-based applications automatically.
- * The principle of least privilege must be used.

NEW QUESTION: 136

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

You need to add Adele Vance to a group named Managers. The solution must ensure that you can grant permissions to Managers.

To answer, sign in to the Microsoft 365 portal.

Answer:

See explanation below.

Explanation

You need to create a group named Managers and add Adele Vance to the group. To ensure that you can grant permissions to the Managers group, the group needs to be a Security Group.

1. Sign in to the Microsoft 365 Admin Center.
2. In the left navigation pane, expand the Groups section then select Groups.
3. Click the 'Add a group' link.
4. For the group type, select Security and click Next.
5. Enter 'Managers' in the Name field and click Next.
6. Click the 'Create Group' button to create the Managers group.
7. In the list of groups, select the Managers group.
8. Click the Members link.
9. Click the 'View all and manage members link'.
10. Click the 'Add Members' button.
11. Select Adele Vance and click the Save button.
12. Click the Close button to close the group page.

NEW QUESTION: 137

You need to meet the security requirement for Group1.

What should you do?

- A. Configure all users to sign in by using multi-factor authentication.
- B. Modify the properties of Group1.
- C. Assign Group1 a management role.
- D. Modify the Password reset properties of the Azure AD tenant.

Answer: D (LEAVE A REPLY)

Explanation

References:

* The members of Group1 must be required to answer a security question before changing their password.

If SSPR (Self Service Password Reset) is enabled, you must select at least one of the following options for the authentication methods. Sometimes you hear these options referred to as "gates." Mobile app notification Mobile app code Email Mobile phone Office phone Security questions You can specify the required authentication methods in the Password reset properties of the Azure AD tenant.

In this case, you should set the required authentication method to be 'Security questions'.

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-howitworks>

NEW QUESTION: 138

You have a Microsoft 365 subscription that contains a user named User1.

You need to ensure that User1 receives Microsoft 365 feature and service updates before the updates are released to all users.

What should you do in the Microsoft 365 admin center?

- A. Modify the privileged access management settings.
- B. Modify Office software download settings.
- C. Modify the Release preferences settings.
- D. Submit a new service request.

Answer: (SHOW ANSWER)

Reference:

<https://practical365.com/blog/first-steps-configure-office-365-first-release-settings/>

NEW QUESTION: 139

Your network contains an on-premises Active Directory domain. The domain contains 2,000 computers that run Windows 10.

You purchase a Microsoft 365 subscription.

You implement password hash synchronization and Azure Active Directory (Azure AD) Seamless Single Sign-On (Seamless SSO).

You need to ensure that users can use Seamless SSO from the Windows 10 computers. What should you do?

- A. Create a conditional access policy in Azure AD.
- B. Deploy an Azure AD Connect staging server.
- C. Join the computers to Azure AD.
- D. Modify the Intranet zone settings by using Group Policy

Answer: D (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-ss0-quick-start>

NEW QUESTION: 140

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You deploy Microsoft 365.

You plan to implement directory synchronization.

You need to recommend a security solution for the synchronized identities. The solution must meet the following requirements:

* Users must be able to authenticate successfully to Microsoft 365 services if Active Directory becomes unavailable.

* Users passwords must be 10 characters or more.

Solution: Implement password hash synchronization and configure password protection in the Azure AD tenant.

Does this meet the goal?

- A. Yes
- B. No

Answer: B (LEAVE A REPLY)

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-password-hash-synchronization>

NEW QUESTION: 141

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com.

A user named User1 has files on a Windows 10 device as shown in the following table. In Azure Information Protection, you create a label named Label1 that is configured to apply automatically.

Label1 is configured as shown in the following exhibit.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

The phrase to match is "im" and it is case sensitive. The phrase must also appear at least twice.

Box 1: No

File1.docx contain the word "import" once only

Box 2: Yes

File2.docx contains two occurrences of the word "import" as well as the word "imported"

Box 3: No File3.docx contains "IM" but his is not the correct letter case.

References:

<https://docs.microsoft.com/en-us/azure/information-protection/configure-policy-classification>

NEW QUESTION: 142

You have a Microsoft 365 E5 subscription linked to an Azure AD tenant named contoso.com. The tenant contains a user named User1 and a Microsoft Teams team named Team 1.

The External collaboration settings in Azure AD are configured as shown in the following exhibit.

Answer:

Explanation

NO, NO Yes

NEW QUESTION: 143

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has 3,000 users. All the users are assigned Microsoft 365 E3 licenses.

Some users are assigned licenses for all Microsoft 365 services. Other users are assigned licenses for only certain Microsoft 365 services.

You need to determine whether a user named User1 is licensed for Exchange Online only.

Solution: You launch the Azure portal, and then review the Licenses blade.

Does this meet the goal?

A. Yes

B. No

Answer: A (LEAVE A REPLY)

Explanation

In the Licenses blade, click All Products then select the E3 License. This will display a list of all users assigned an E3 license. Select User1. You'll see how many services are assigned in the Enabled Services column. Click on the number in the Enabled Services column for User1 and you'll be taken to the licenses page for that user. Click on the number in the Enabled Services column for User1 again and a page will open which shows you exactly which services are enabled or disabled.

Alternatively, you can go into the user account properties directly then select Licenses.

This will display the licenses blade for that user. You can then click on the number in the Enabled Services column for the user and a page will open which shows you exactly which services are enabled or disabled.

NEW QUESTION: 144

Your on-premises network contains an Active Directory domain.

You have a Microsoft 365 E5 subscription.

You plan to implement a hybrid configuration that has the following requirements:

- * Minimizes the number of times users are prompted for credentials when they access Microsoft 365 resources

- * Supports the use of Azure Active Directory (Azure AD) Identity Protection You need to configure Azure AD Connect to support the planned implementation. Which two options should you select? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Enable single sign-on

B. Directory extensions attribute sync

C. Pass-through authentication

D. Password writeback

Answer: B,C (LEAVE A REPLY)

NEW QUESTION: 145

Your on-premises network hosts an app named App1.

You have a hybrid Microsoft 365 environment that contains 100 users. The users are assigned Microsoft 365 E5 licenses.

You need to enable Azure Active Directory Seamless Single Sign-On (Azure AD Seamless SSO) for App1 Which three actions should you perform in sequence? To answer, move the

appropriate actions from the list of actions to the answer area and arrange them in the connect order.

Answer:

Explanation

Graphical user interface, text, application, email Description automatically generated

NEW QUESTION: 146

You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1. You enable Azure AD Identity Protection.

You need to ensure that User1 can review the list in Azure AD Identity Protection of users flagged for risk.

The solution must use the principle of least privilege.

To which role should you add User1?

- A. Security reader
- B. Compliance administrator
- C. Reports reader
- D. Global administrator

Answer: A (LEAVE A REPLY)

Explanation

The risky sign-ins reports are available to users in the following roles:

- * Security Administrator
- * Global Administrator
- * Security Reader

Of the three roles listed above, the Security Reader role has the least privilege.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-risky-sign-ins>

NEW QUESTION: 147

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab.

Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username:

admin@LODSe1211885.onmicrosoft.com

Microsoft 365 Password: oL9z0=?Nq@ox

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11098651

You recently discovered that several users in your organization have permissions on the mailbox of another user in the organization.

You need to ensure that Lee Gu receives a notification when a user is granted permissions on another user's mailbox.

To answer the question, sign in to the Microsoft 365 portal.

Answer:

See explanation below.

Explanation

Create an activity alert

1. Go to <https://protection.office.com/managealerts>.
2. Sign in to Office 365 using your work or school account.
3. On the Activity alerts page, click + New. The flyout page to create an activity alert is displayed.
4. Complete the following fields to create an activity alert:
 - * Name - Type a name for the alert. Alert names must be unique within your organization.
 - * Description (Optional) - Describe the alert, such as the activities and users being tracked, and the users that email notifications are sent to. Descriptions provide a quick and easy way to describe the purpose of the alert to other admins.
 - * Alert type - Make sure the Custom option is selected.
 - * Send this alert when - Click Send this alert when and then configure these two fields:

- Activities - Click the drop-down list to display the activities that you can create an alert for. This is the same activities list that's displayed when you search the Office 365 audit log. You can select one or more specific activities or you can click the activity group name to select all activities in the group. For a description of these activities, see the "Audited activities" section in Search the audit log. When a user performs any of the activities that you've added to the alert, an email notification is sent.

- Users - Click this box and then select one or more users. If the users in this box perform the activities that you added to the Activities box, an alert will be sent. Leave the Users box blank to send an alert when any user in your organization performs the activities specified by the alert.

* Send this alert to - Click Send this alert, and then click in the Recipients box and type a name to add a users who will receive an email notification when a user (specified in the Users box) performs an activity (specified in the Activities box). Note that you are added to the list of recipients by default. You can remove your name from this list.

5. Click Save to create the alert. The new alert is displayed in the list on the Activity alerts page.

The status of the alert is set to On. Note that the recipients who will received an email notification when an alert is sent are also listed.

<https://docs.microsoft.com/en-us/microsoft-365/compliance/create-activity-alerts?view=o365-worldwide>

NEW QUESTION: 148

You have a Microsoft 365 E5 subscription that contains the users shown in the following table.

You enable Microsoft 365 usage analytics for Microsoft Power BI.

Which users can use Power BI to connect to Microsoft 365 usage analytics and review usage analytics reports?

- A. Admin1, Admm2, and Admm3 only
- B. Admm1, Admm2, Admin3, and Admin4
- C. Admin3 only
- D. Admin 1 and Admin2 only
- E. Admin3 and Admin4 only

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 149

Your company has 500 client computers that run Windows 10.

You plan to deploy Microsoft Office 365 ProPlus to all the computers.

You create the following XML file for the planned deployment.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1:

When the installation is complete, all users will be prompted to install several updates. In the configuration file, the Updates Enabled element is set to True. This means that Office will check for updates after the installation.

The Channel element set to Broad means that all semi-annual channel updates will be installed.

Box 2:

Office 365 ProPlus will be installed only on the computers that run a 64-bit version of Windows 10.

The OfficeClientEdition element defines whether the 32-bit or 64-bit edition of Office 365 ProPlus is downloaded or installed. In the configuration file, it is set to '64'. The 64-bit version will only install on a 64-bit client computer.

Reference:

<https://docs.microsoft.com/en-us/deployoffice/configuration-options-for-the-office-2016-deployment-tool>

NEW QUESTION: 150

You receive the following JSON document when you use Microsoft Graph to query the current signed-in user.

Answer:

Explanation

NEW QUESTION: 151

You plan to create a single-tenant console app that will use the Microsoft identity platform. You need to ensure that the app can use the device code flow to access Microsoft Graph and read email on behalf of the authenticated user.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Generate a client secret for the app
- B. Enable the Default client type option.
- C. Set Supported account types to Accounts in any organizational directory
- D. From the Expose an API settings, create a custom scope.
- E. Add redirect URIs.
- F. Set Supported account types to Accounts In this organizational directory only

Answer: A,C,E (LEAVE A REPLY)

NEW QUESTION: 152

You are developing an app that will query the tenant for the names of all the Microsoft Teams teams in the organization. What permission will the app require? Your solution must follow the principle of least privilege.

- A. TeamSettings.Read.All
- B. Group.Read.All
- C. Directory.Read.All
- D. Channel.ReadBasic.All

Answer: A (LEAVE A REPLY)

NEW QUESTION: 153

You have a Microsoft 365 subscription.

From the Microsoft 365 portal, users download and install Microsoft Office apps on their devices.

You need to ensure that Office feature updates are installed by using the Semi-Annual Enterprise Channel.

What should you configure from the Services page of the Microsoft 365 admin center?

- A. Office on the web
- B. Office Scripts
- C. Office installation options
- D. User owned apps and services

Answer: C (LEAVE A REPLY)

NEW QUESTION: 154

Your company uses email, calendar, contact, and task services in Microsoft Outlook.com. You purchase a Microsoft 365 subscription and plan to migrate all users from Outlook.com to Microsoft 365.

You need to identify which user data can be migrated to Microsoft 365.

Which type of data should you identify?

- A. task
- B. email

C. calendar

D. contacts

Answer: B (LEAVE A REPLY)

Explanation

You can use the Internet Message Access Protocol (IMAP) to migrate user email from Gmail, Exchange, Outlook.com, and other email systems that support IMAP migration. When you migrate the user's email by using IMAP migration, only the items in the users' inbox or other mail folders are migrated. Contacts, calendar items, and tasks can't be migrated with IMAP, but they can be by a user.

Reference:

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/mailbox-migration#migrate-email-from-anotherim>

NEW QUESTION: 155

You have a hybrid deployment of Microsoft 365 that contains the users shown in the following table.

Azure AD Connect has the following settings:

* Password Hash Sync Enabled

* Pass-through authentication: Enabled

You need to identify which users will be able to authenticate by using Azure AD if connectivity between on-premises Active Directory and the internet is lost. Which users should you identify?

A. User 1 only

B. none

C. User1, User2, and User3

D. User1 and User2 only

Answer: C (LEAVE A REPLY)

NEW QUESTION: 156

You have a Microsoft Azure Active Directory (Azure AD) tenant.

Your company implements Windows Information Protection (WIP).

You need to modify which users and applications are affected by WIP.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Microsoft Intune has an easy way to create and deploy a Windows Information Protection (WIP) policy. You can choose which apps to protect, the level of protection, and how to find enterprise data on the network. The devices can be fully managed by Mobile Device Management (MDM), or managed by Mobile Application Management (MAM), where Intune manages only the apps on a user's personal device.

The MAM User scope determines which users are affected by WIP. App protection policies are used to configure which applications are affected by WIP.

Lab Instance: 10887751

Your company has a web application named App1.

The company plans to publish App1 by using a URL of <https://app1.contoso.com>.

You need to register App1 to your Microsoft Office 365 tenant.

Answer:

See explanation below.

Explanation

You need to register App1 in Azure Active Directory.

1. Go to the Azure Active Directory admin center.
2. Select Azure Active Directory.
3. Select 'App registrations'.
4. Click the 'New registration' link.
5. Enter the name App1.
6. Click the Register button.
7. To add the URL to App1, select App1 in the list of registered apps.
8. In the properties page of App1, select Branding.
9. Enter the URL <https://app1.contoso.com> in the 'Home page URL' box.
10. Click Save to save the changes.

<https://docs.microsoft.com/en-us/azure/active-directory/develop/quickstart-register-app>

NEW QUESTION: 158

You have a Microsoft 365 tenant that contains 300 users.

The users have Domestic and International Calling Plan licenses.

What is the maximum user phone numbers and toll-free service phone numbers can you acquire? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Graphical user interface, text, application, email Description automatically generated

Reference:

<https://docs.microsoft.com/en-us/microsoftteams/how-many-phone-numbers-can-you-get>

NEW QUESTION: 159

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You discover that some external users accessed content on a Microsoft SharePoint site.

You modify the SharePoint sharing policy to prevent sharing outside your organization.

You need to be notified if the SharePoint policy is modified in the future.

Solution: From the SharePoint admin center, you modify the sharing settings.

Does this meet the goal?

A. Yes

B. No

Answer: ([SHOW ANSWER](#))

Explanation

You need to create a threat management policy in the Security & Compliance admin center.

NEW QUESTION: 160

You have a Microsoft 365 E5 subscription.

Currently, users cannot install Microsoft 365 Apps for enterprise from the Microsoft Office portal.

You need to perform the following tasks:

- * Enable the installation of Microsoft 365 Apps for enterprise from the Office portal
- * Ensure that the users can auto-claim Microsoft Teams licenses.

Which two Org settings should you configure in the Microsoft 365 admin center? To answer, select the appropriate settings in the answer area.

Answer:

Explanation

NEW QUESTION: 161

Your company has an Azure Active Directory (Azure AD) tenant named contoso.com and a Microsoft 365 subscription.

Contoso.com contains the users shown in the following table.

You add an enterprise application named App1 to contoso.com.

You configure the following self-service settings for App1:

- * Allow users to request access to this application is set to Yes.
- * To which group should assigned users be added is set to Group1.
- * Who is allowed to approve access to this application is set to User2.
- * Require approval before granting access to this application is set to Yes.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Box 1: Yes.

User1 can request access to App1 because "Allow users to request access to this application" is set to Yes.

Box 2: No.

User2 is an approver. If User2 requests access to App1, he will still need to approve the request before he is added to Group1.

Box 3: Yes.

User2 can approve requests for App1 because "Who is allowed to approve access to this application" is set to User2.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/manage-self-service-access>

NEW QUESTION: 162

Your company has a Microsoft 365 tenant named litwareinc.com.

The Guest access settings in Microsoft Teams are configured as shown in the following exhibit.

The External access settings in Microsoft Teams are configured as shown in the following exhibit.

The company has a third-party supplier named adventureworks.com. Users in litwareinc.com collaborate with the following users by using Microsoft Teams:

* User1@contoso.com

* User2@adventureworks.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Graphical user interface, text, application Description automatically generated

The answer to this question depends on whether User1 and User2 have been added as guests. The question does not say that they are guests so we would have to assume they're not.

External Access is turned off. Even with the Contoso.com domain added as an allowed domain, the Off settings override this. If the external access settings were 'On', they would be on for only the Contoso.com domain.

Box 1: No

If External Access was On, the answer to this would still be No. If User2 was a guest, the answer to this would be Yes.

Box 2: No

If External Access was On, the answer to this would still be No. External Access does not enable Meet Now for the external user. If User1 was a guest, the answer to this would be Yes.

Box 3: No

If External Access was On, the answer to this would still be No. External Access does not allow blocking. If User1 was a guest, the answer to this would be Yes.

Reference:

<https://docs.microsoft.com/en-us/microsoftteams/set-up-guests>

<https://docs.microsoft.com/en-us/microsoftteams/communicate-with-users-from-other-organizations>

NEW QUESTION: 163

Your company has three main offices and one branch office. The branch office is used for research.

The company plans to implement a Microsoft 365 tenant and to deploy multi-factor authentication.

You need to recommend a Microsoft 365 solution to ensure that multi-factor authentication is enforced only for users in the branch office. What should you include in the recommendation?

- A. a Microsoft Endpoint Manager Device compliance policy
- B. Azure AD password protection
- C. Azure AD conditional access
- D. a Microsoft Endpoint Manager Device configuration profile

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 164

In Microsoft 365, you configure a data loss prevention (DLP) policy named Policy1. Policy1 detects the sharing of United States (US) bank account numbers in email messages and attachments.

Policy1 is configured as shown in the exhibit. (Click the Exhibit tab.)

You need to ensure that internal users can email documents that contain US bank account numbers to external users who have an email suffix of contoso.com.

What should you configure?

- A. an action
- B. a group
- C. a condition
- D. an exception

Answer: D ([LEAVE A REPLY](#))

Explanation

You need to add an exception. In the Advanced Settings of the DLP policy, you can add a rule to configure the Conditions and Actions. There is also an 'Add Exception' button. This gives you several options that you can select as the exception. One of the options is 'except when recipient domain is'. You need to select that option and enter the domain name contoso.com.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies#how-dlp-policies-w>

NEW QUESTION: 165

You have an Active Directory domain named Adatum.com that is synchronized to Azure Active Directory as shown in the exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

Group Writeback is enabled in the Azure AD Connect configuration so groups created in Azure Active Directory will be synchronized to the on-premise Active Directory. A security group created in Azure Active Directory will be synchronized to the on-premise Active Directory as a security group.

Device Writeback is enabled in the Azure AD Connect configuration so computers joined to the Azure Active Directory will be synchronized to the on-premise Active Directory. They will sync to the RegisteredDevices container in the on-premise Active Directory.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-device-writeback>

NEW QUESTION: 166

You have a Microsoft 365 E5 subscription.

You have an Azure AD tenant named contoso.com that contains the following users:

- * Admin 1
- * Admin2
- * User1

Contoso.com contains an administrative unit named AU1 that has no role assignments.

User1 is a member of AU1.

Answer:

Explanation

Valid MS-100 Dumps shared by Actual4test.com for Helping Passing MS-100 Exam!

NEW QUESTION: 167

You have a single-page application (SPA) named TodoListSPA and a server-based web app named TodoUstServKe.

The permissions for the TodoListSPA API are configured as shown in the TodoUstSPA exhibit (Click the TodoUstSPA tab) The permissions for the TodoUstService API are configured as shown in the TodoListService exhibit (Click the TodoUstService tab.) You need to ensure that TodoUstService can access a Microsoft OneDrive file of the signed-in user. The solution must use the principle of least privilege.

Which permission request should you configure?

- A. the sites.Read.All application permission for TodoUstSPA
- B. the sites.Read.All delegated permission for TodoListSPA
- C. the sites.Read.All delegated permission for TodoUstService
- D. the sites.Read.All application permission for TodoUstService

Answer: C (LEAVE A REPLY)

NEW QUESTION: 168

You create a Microsoft 365 Enterprise subscription.

You assign licenses for all products to all users.

You need to ensure that all Microsoft Office 365 ProPlus installations occur from a network share. The solution must prevent the users from installing Office 365 ProPlus from the Internet.

Which three actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From your computer, run `setup.exe /download downloadconfig.xml`.
- B. Create an XML download file.
- C. From the Microsoft 365 admin center, deactivate the Office 365 licenses for all the users.
- D. From each client computer, run `setup.exe /configure installconfig.xml`.
- E. From the Microsoft 365 admin center, configure the Software download settings.

Answer: B,D,E (LEAVE A REPLY)

Explanation

You can use the Office Deployment Tool (ODT) to download the installation files for Office 365 ProPlus from a local source on your network instead of from the Office Content Delivery Network (CDN).

The first step is to create the configuration file. You can download an XML template file and modify that.

The next step to install Office 365 ProPlus is to run the ODT executable in configure mode with a reference to the configuration file you just saved. In the following example, the configuration file is named `installconfig.xml`. `setup.exe /configure installconfig.xml` After running the command, you should see the Office installation start.

To prevent the users from installing Office 365 ProPlus from the Internet, you need to configure the Software download settings (disallow downloads) in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/deployoffice/overview-of-the-office-2016-deployment-tool#download-the-insta>

NEW QUESTION: 169

Your company has a main office and 20 branch offices in North America and Europe. Each branch office connects to the main office by using a WAN link. All the offices connect to the Internet and resolve external host names by using the main office connections.

You plan to deploy Microsoft 365 and to implement a direct Internet connection in each office.

You need to recommend a change to the infrastructure to provide the quickest possible access to Microsoft 365 services.

What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal.

Select the BEST answer.

- A.** For all the client computers in the branch offices, modify the MTU setting by using a Group Policy object (GPO).
- B.** In each branch office, deploy a proxy server that has user authentication enabled.
- C.** In each branch office, deploy a firewall that has packet inspection enabled.
- D.** In each branch office, configure name resolution so that all external hosts are redirected to public DNS servers directly.

Answer: D (LEAVE A REPLY)

Explanation

Being a cloud service, Office 365 would be classed as an external host to the office computers.

All the offices connect to the Internet and resolve external host names by using the main office connections.

This means that all branch office computers perform DNS lookups and connect to the Internet over the WAN link.

Each branch office will have a direct connection to the Internet so the quickest possible access to Microsoft

365 services would be by using the direct Internet connections. However, the DNS lookups would still go over the WAN links to main office. The solution to provide the quickest possible access to Microsoft 365 services is to configure DNS name resolution so that the computers use public DNS servers for external hosts. That way DNS lookups for Office 365 and the connections to Office 365 will use the direct Internet connections.

NEW QUESTION: 170

You need to recommend which API object the SharePoint Framework (SPFx) intranet components will use to access the research department s project management solution.

What should you recommend?

- A. SPHttpClient
- B. AadHttpClient
- C. HSGraphClient
- D. HttpClient

Answer: (SHOW ANSWER)

NEW QUESTION: 171

You are developing a single-page application (SPA) that authenticates users by using MSALjs. The SPA must meet the following requirements:

- * Only allow access to the users in an organization named contoso.onmicrosoft.com.
- * Support single sign-on (SSO) across tabs and user sessions.

How should you complete the code for the SPA? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

NEW QUESTION: 172

Your network contains an Active Directory forest named adatum.local. The forest contains 500 users and uses adatum.com as a UPN suffix.

You deploy a Microsoft 365 tenant.

You implement directory synchronization and sync only 50 support users.

You discover that five of the synchronized users have usernames that use a UPN suffix of onmicrosoft.com.

You need to ensure that all synchronized identities retain the UPN set in their on-premises user account.

What should you do?

- A. From the Microsoft 365 admin center, add adatum.com as a custom domain name.
- B. From Windows PowerShell, run the Set-ADDomain -AllowedDNSSuffixes adatum.com command.
- C. From Active Directory Users and Computers, modify the UPN suffix of the five user accounts.
- D. From the Microsoft 365 admin center, add adatum.local as a custom domain name.

Answer: C (LEAVE A REPLY)

Explanation

The question states that only five of the synchronized users have usernames that use a UPN suffix of onmicrosoft.com. Therefore the other 45 users have the correct UPN suffix. This tells us that the adatum.com domain has already been added to Office 365 as a custom domain.

The forest is named adatum.local and uses adatum.com as a UPN suffix. User accounts in the domain will have adatum.local as their default UPN suffix. To use adatum.com as the UPN suffix, each user account will need to be configured to use adatum.com as the UPN suffix.

Any synchronized user account that has adatum.local as a UPN suffix will be configured to use a UPN suffix of onmicrosoft.com because adatum.local cannot be added to Office 365 as a custom domain.

Therefore, the reason that the five synchronized users have usernames with a UPN suffix of onmicrosoft.com is because their accounts were not configured to use the UPN suffix of contoso.com.

NEW QUESTION: 173

You have several Microsoft SharePoint document libraries in your on-premises environment.

You have a Microsoft 365 tenant that has directory synchronization implemented.

You plan to move all the document libraries to SharePoint Online.

You need to recommend a migration strategy for the document libraries.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:

- * SharePoint Server 2013
- * SharePoint Server 2010
- * Network and local file shares

The first step is to create new SharePoint sites in SharePoint online. These sites will host the document libraries which will host the migrated content.

The second step is to create the document libraries in the SharePoint sites to host the migrated content.

The final step is to use the SharePoint Migration Tool to migrate the content.

<https://docs.microsoft.com/en-us/sharepointmigration/how-to-use-the-sharepoint-migration-tool>

NEW QUESTION: 174

You have a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. Contoso.com contains the users shown in the following table.

Contoso.com is configured as shown in the following exhibit.

You need to ensure that guest users can be created in the tenant.

Which setting should you modify?

- A. Guests can invite.
- B. Guest users permissions are limited.
- C. Members can invite.
- D. Admins and users in the guest inviter role can invite.
- E. Deny invitations to the specified domains

Answer: D (LEAVE A REPLY)

Explanation

The setting "Admins and users in the guest inviter role can invite" is set to No. This means that no one can create guest accounts because they cannot 'invite' guests. This setting needs to be changed to Yes to ensure that guest users can be created in the tenant.

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations>

<https://docs.microsoft.com/en-us/azure/active-directory/fundamentals/users-default-permissions>

NEW QUESTION: 175

Your network contain*, an on-premises Active Directory forest.

You are evaluating the implementation of Microsoft 365 and the deployment of authentication strategy.

You need to recommend an authentication strategy that meets the following requirements:

* Allows users to sign in by using smart card-based certificates

* Allows users to connect to on premises and Microsoft 365 services by using SSO Which authentication strategy should you recommend?

- A. password hash synchronization and seamless SSO
- B. federation with Active Directory Federation Services (AD FS)
- C. pass-through authentication and seamless SSO

Answer: B (LEAVE A REPLY)

Explanation

References:

Federation with Active Directory Federation Services (AD FS) is required to allow users to sign in by using smart card-based certificates.

Federated authentication

When you choose this authentication method, Azure AD hands off the authentication process to a separate trusted authentication system, such as on-premises Active Directory Federation Services (AD FS), to validate the user's password.

The authentication system can provide additional advanced authentication requirements.

Examples are smartcard-based authentication or third-party multifactor authentication.

Reference:

<https://docs.microsoft.com/en-us/azure/security/azure-ad-choose-authn>

NEW QUESTION: 176

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains a user named User1.

You suspect that an imposter is signing in to Azure AD by using the credentials of User1.

You need to ensure that an administrator named Admin1 can view all the sign in details of User 1 from the past 24 hours.

To which three roles should you add Admin1? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Security administrator
- B. Password administrator
- C. User administrator
- D. Compliance administrator
- E. Reports reader
- F. Security Reader

Answer: A,E,F (LEAVE A REPLY)

Explanation

Users in the Security Administrator, Security Reader, Global Reader, and Report Reader roles can view the sign in details.

<https://docs.microsoft.com/en-us/azure/active-directory/reports-monitoring/concept-sign-ins>

NEW QUESTION: 177

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory forest named contoso.com. The forest contains the following domains:

Contoso.com

East.contoso.com

An Azure AD Connect server is deployed to contoso.com. Azure AD Connect syncs to an Azure Active Directory (Azure AD) tenant.

You deploy a new domain named west.contoso.com to the forest.

You need to ensure that west.contoso.com syncs to the Azure AD tenant.

Solution: You install a new Azure AD Connect server in west.contoso.com and set AD Connect to staging mode.

Does this meet the goal?

A. Yes

B. No

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 178

You have a Microsoft 365 subscription.

You create a new Conditional Access policy named CAPolicy1.

You need to be able to review how CAPolicy1 has affected users after 90 days.

What should you do?

A. Run the Get-AzureADAuditSignInLogs cmdlet

B. From the Microsoft 365 admin center, view the Email activity report.

C. Deploy the Conditional Access insights and reporting workbook.

D. From the Azure Active Directory admin center review the sign-in logs for each user.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 179

You have a Microsoft 365 subscription.

You need to implement Windows Defender Advanced Threat Protection (ATP) for all the supported devices enrolled devices enrolled on mobile device management (MDM).

What should you include in the device configuration profile? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation

You can integrate Microsoft Defender Advanced Threat Protection (Microsoft Defender ATP) with Microsoft Intune as a Mobile Threat Defense solution. Integration can help you prevent security breaches and limit the impact of breaches within an organization.

Microsoft Defender ATP works with devices that run Windows 10 or later.

When you establish a connection from Intune to Microsoft Defender ATP, Intune receives a Microsoft Defender ATP onboarding configuration package from Microsoft Defender ATP.

This package is deployed to devices by using a device configuration profile.

Reference:

<https://docs.microsoft.com/en-us/intune/advanced-threat-protection>

NEW QUESTION: 180

You need to meet the application requirement for the Office 365 ProPlus applications.

You create a XML file that contains the following settings.

Use the drop-down menus to select the choice that complete each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Answer:

NEW QUESTION: 181

Your on-premises network contains five file servers. The file servers host shares that contain user data.

You plan to migrate the user data to a Microsoft 365 subscription.

You need to recommend a solution to import the user data into Microsoft OneDrive.

What should you include in the recommendation?

- A.** Configure the Migrate of the OneDrive client on your Windows 10 device
- B.** Configure the Sync settings in the OneDrive admin center.
- C.** Run the SharePoint Hybrid Configuration Wizard.
- D.** Run the SharePoint Migration Tool.

Answer: D (LEAVE A REPLY)

Explanation

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:

- * SharePoint Server 2013
- * SharePoint Server 2010
- * Network and local file shares
