NEW QUESTION: 33

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com that is synced to Microsoft Azure Active Directory (Azure AD).

You manage Windows 10 devices by using Microsoft System Center Configuration Manager (Current Branch).

You configure a pilot for co-management.

You add a new device named Device1 to the domain. You install the Configuration Manager client on Device1.

You need to ensure that you can manage Device1 by using Microsoft Intune and Configuration Manager.

Solution: Define a Configuration Manager device collection as the pilot collection. Add Device1 to the collection.

Does this meet the goal?

A. Yes

B. NO

Answer: A (LEAVE A REPLY)

Device1 has the Configuration Manager client installed so you can manage Device1 by using Configuration Manager. To manage Device1 by using Microsoft Intune, the device has to be enrolled in Microsoft Intune. In the Co-management Pilot configuration, you configure a Configuration Manager Device Collection that determines which devices are auto-enrolled in Microsoft Intune. You need to add Device1 to the Device Collection so that it auto-enrolls in Microsoft Intune. You will then be able to manage Device1 using Microsoft Intune. NEW QUESTION: 63

You have a Microsoft 365 subscription.

You need to be notified if users receive email containing a file that has a virus.

What should you do?

- A.** From the Exchange admin center, create a spam filter policy.
- B.** From the Security & Compliance admin center, create a data governance event.
- C.** From the Security & Compliance admin center, create an alert policy.
- D.** From the Exchange admin center, create a mail-flow rule.

Answer: D (LEAVE A REPLY)

You can inspect email attachments in your Exchange Online organization by setting up mail flow rules. Exchange Online offers mail flow rules that provide the ability to examine email attachments as a part of your messaging security and compliance needs. When you inspect attachments, you can then take action on the messages that were inspected based on the content or characteristics of those attachments.

Incorrect answers:

A: A spam filter policy includes selecting the action to take on messages that are identified as spam. Spam filter policy settings are applied to inbound messages.

B: A data governance event commences when an administrator creates it, following which background processes look for content relating to the event and take the retention action defined in the label. The retention action can be to keep or remove items, or to mark them for manual disposition.

NEW QUESTION: 93

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain. The domain contains domain controllers that run Windows Server 2019. The functional level of the forest and the domain is Windows Server 2012 R2.

The domain contains 100 computers that run Windows 10 and a member server named Server1 that runs Windows Server 2012 R2.

You plan to use Server1 to manage the domain and to configure Windows 10 Group Policy settings.

You install the Group Policy Management Console (GPMC) on Server1.

You need to configure the Windows Update for Business Group Policy settings on Server1.

Solution: You upgrade Server1 to Windows Server 2019.

Does this meet the goal?

A. yes

B. No

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 94

NEW QUESTION: 101

Which report should the New York office auditors view?

- A.** DLP policy matches
- B.** DLP false positives and overrides
- C.** DLP incidents
- D.** Top Senders and Recipients

Answer: **C** ([LEAVE A REPLY](#))

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies> This report also shows policy matches over time, like the policy matches report. However, the policy matches report shows matches at a rule level; for example, if an email matched three different rules, the policy matches report shows three different line items. By contrast, the incidents report shows matches at an item level; for example, if an email matched three different rules, the incidents report shows a single line item for that piece of content. Because the report counts are aggregated differently, the policy matches report is better for identifying matches with specific rules and fine tuning DLP policies. The incidents report is better for identifying specific pieces of content that are problematic for your DLP policies.

You have a Microsoft 365 subscription.

From the Security & Compliance admin center, you create a role group named US eDiscovery Managers by copying the eDiscovery Manager role group.

You need to ensure that the users in the new role group can only perform content searches of mailbox content for users in the United States.

Solution: From the Azure Active Directory admin center, you create a conditional access policy.

Does this meet the goal?

A. No

B. Yes

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 105

You have a Microsoft 365 subscription.

From the subscription, you perform an audit log search, and you download all the results.

You plan to review the audit log data by using Microsoft Excel.

You need to ensure that each audited property appears in a separate Excel column.

What should you do first?

- A. From Power Query Editor, transform the JSON data.
- B. Format the Operations column by using conditional formatting.
- C. Format the AuditData column by using conditional formatting.
- D. From Power Query Editor, transform the XML data.

Answer: ([SHOW ANSWER](#))

After you search the Office 365 audit log and download the search results to a CSV file, the file contains a column named AuditData, which contains additional information about each event. The data in this column is formatted as a JSON object, which contains multiple properties that are configured as property:value pairs separated by commas. You can use the JSON transform feature in the Power Query Editor in Excel to split each property in the JSON object in the AuditData column into multiple columns so that each property has its own column. This lets you sort and filter on one or more of these properties Reference: <https://docs.microsoft.com/en-us/microsoft-365/compliance/export-view-audit-log-records>

Technical Requirements

Centrally perform log analysis for all offices.

Aggregate all data from the SIEM appliances to a central cloud repository for later analysis.

Ensure that a SharePoint administrator can identify who accessed a specific file stored in a document library.

Provide the users in the finance department with access to Service assurance information in Microsoft Office 365.

Ensure that documents and email messages containing the PII data of European Union (EU) citizens are preserved for 10 years.

If a user attempts to download 1,000 or more files from Microsoft SharePoint Online within 30 minutes, notify a security administrator and suspend the user's user account.

A security administrator requires a report that shows which Microsoft 365 users signed in. Based on the report, the security administrator will create a policy to require multi-factor authentication when a sign in is high risk.

Ensure that the users in the New York office can only send email messages that contain sensitive US. PII data to other New York office users. Email messages must be monitored

to ensure compliance. Auditors in the New York office must have access to reports that show the sent and received email messages containing sensitive U.S. PII data.

- C. Windows 10 and macOS Only
- D. Windows 10, Android, and iOS

Answer: C (LEAVE A REPLY)

Endpoint data loss prevention (Endpoint DLP) extends the activity monitoring and protection capabilities of DLP to sensitive items that are physically stored on Windows 10, Windows 11, and macOS (Catalina 10.15 and higher) devices. Once devices are onboarded into the Microsoft Purview solutions, the information about what users are doing with sensitive items is made visible in activity explorer and you can enforce protective actions on those items via DLP policies.
