NEW QUESTION: 1

You are designing a new Microsoft Power Platform solution for a wedding organizer company.

The company uses a third-party application and plans to migrate the data into Microsoft Dataverse for the new solution. The third-party application has an API that can be connected to programmatically for data migration purposes.

You need to migrate the unique IDs belonging to the records from the third-party application.

Which two Microsoft Dataverse column types should you use to store this information?

Each correct answer presents a complete solution.

- A. Plain Text
- B. Float
- C. Unique Identifier
- D. Text Area
- E. Rich Text

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 2

A company uses two separate unlinked apps to manage sales leads: a Power Apps app and a third-party application.

The client has the following requirements:

- Manage all leads by using the Power Apps app.
- Create a lead in the Power Apps app when a user creates a lead in the third-party application.
- Update leads in the Power Apps app when a user updates a lead in the third-party application.
- Connect to the third-party application by using an API.

You need to recommend strategies to integrate the Power Apps app and the third-party application.

Which three options can you use to achieve the goal? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Dual-write
- B. Custom connector
- C. Dataflow

D. Power Automate cloud flow

E. DataService connector

Answer: A,D,E (LEAVE A REPLY)

A: Customers should be able to adopt business applications from Microsoft and expect they speak the same language and seamlessly work together. Dual Write allows our customers to not think about these apps as different systems to write to independently; rather, the underlying infrastructure makes it seamless for these apps to write simultaneously.

D: Use Custom APIs to create your own APIs in Dataverse. With a Custom API you can consolidate a group of operations into an API that you and other developers can call in their code. The Common Data Service (current environment) connector enables calling Custom APIs actions in Power Automate.

E: Common Data Service provides access to the environment database on the Microsoft Common Data Service. It is available for Logic Apps, Power Automate, and Power Apps.

Reference:

<https://docs.microsoft.com/en-us/business-applications-release-notes/april19/cdm-data-integration/dual-writelink-common-data-service-apps>

<https://docs.microsoft.com/en-us/connectors/commondataservice/>

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/custom-api>

NEW QUESTION: 3

A company has a website that contains a form named Contact Us. Data from completed forms is saved to a shared document. An office administrator periodically reviews the document. The office administrator sends new submissions to another employee who creates contacts or updates existing contacts.

You need to recommend a solution to automate the process.

What should you recommend?

A. Excel Online Connector

B. Dynamics 365 Customer Insights

C. Dynamics 365 Customer Service

D. Dynamics 365 Marketing

Answer: D (LEAVE A REPLY)

Microsoft designed Customer Insights to allow organizations to map, match, merge, and enrich customerbased data from different sources. A classic scenario would be to merge data from customer service software, like Freshdesk, and online sales, such as Shopware, into one source for reporting and further data analysis.

Reference:

<https://msdynamicsworld.com/story/microsoft-dynamics-365-customer-insights-overview>

NEW QUESTION: 4

You are designing a Power Platform solution for a company.

Users must be granted access only to data that is relevant to them.

You need to recommend actions to meet the requirements.

Which two recommendations should you make? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Add column security profiles to applicable teams.

B. Define and configure security roles.

C. Create teams and assign security roles and users to the teams.

D. Create business units and assign security roles to the business units.

Answer: B,D (LEAVE A REPLY)

To control data access, you must set up an organizational structure that both protects sensitive data and enables collaboration. You do this by setting up business units, security roles, and field security profiles.

Reference:
<https://docs.microsoft.com/en-us/power-platform/admin/security-roles-privileges>

NEW QUESTION: 5

You are designing a business strategy for a client who has a Power Platform solution.
The client works with critical data where any data loss creates a high risk.
You need to document the failover process for the stakeholders.
Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

If the second call is successful, the application continues normally.

The application makes a service call to the datacenter.

The application receives an exception after attempting the service call.

The application automatically tries the call again.

The application redirects calls to an on-premises server.

Answer Area

←

→

↑

↓

Answer:

Actions

If the second call is successful,
the application continues normally.

The application makes a service call
to the datacenter.

The application receives an exception
after attempting the service call.

The application automatically tries
the call again.

The application redirects calls to
an on-premises server.

Answer Area

The application makes a service call
to the datacenter.

The application receives an exception
after attempting the service call.

The application redirects calls to
an on-premises server.

If the second call is successful,
the application continues normally.

Explanation:

The application makes a service call
to the datacenter.

The application receives an exception
after attempting the service call.

The application redirects calls to
an on-premises server.

If the second call is successful,
the application continues normally.

NEW QUESTION: 6

You need to design the security strategy for employees.

What should you use?

- A. a business unit for each department with a security role for each department and a hierarchy security model
- B. one business unit with one security role and a hierarchy security model
- C. a business unit for each department with one security role
- D. one business unit with a security role for each department

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 7

A company plans to use Power BI.
The company plans to share reports indefinitely with a specific set of users.
You need to recommend a solution.
Which solution should you recommend?

- A. Embed code by using the website or portal option.
- B. Share directly with the users.
- C. Share by using a link.
- D. Embed code by using the Publish to web option.

Answer: (SHOW ANSWER)

NEW QUESTION: 8

A company has an expense approval process that allows expenses to be submitted in multiple currencies.
An accountant converts the expense amount to USD as part of the approval process.
You need to automate the conversion by using the RESTful AP1.
What should you do?

- A. Create a desktop flow. Use an Invoke web service action to get the currency conversion rate.
- B. Create a cloud flow. Use the Microsoft Graph API to get the currency conversion rate.
- C. Create a cloud flow. Install a data gateway to get the currency conversion rate.
- D. Create a desktop flow. Use an Azure action to get the currency conversion rate.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 9

You are a Microsoft Power Platform architect.
You must identify and document your organization's business processes to identify opportunities for automaton.
You need to run task mining in process advisor.
In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Prepare processes and recordings.

Analyze processes.

Visualize processes.

Identify automation recommendations.

NEW QUESTION: 10

You are working with a customer to plan a go-live deployment to their production environment. The solution includes several apps and environment variables. The superuser team manages the production environment that is secured by using a specific environment Azure AD security group.

The following issues have been identified:

- * The super user team cannot access make.powerapps.com to open and set the environment variables.
- * Users are added to the environment Azure AD security group and are not able to access the model-driven app.
- * Users are added to the environment Azure AD security group and are not able to access the canvas app.

You need to resolve the issues.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer Area

Issue	Resolution
The superuser team cannot set the environment variables.	Assign the System Customizer role. - Assign the System Customizer role. - Assign the Basic User role. - Assign the Service Reader role. - Assign the Office Collaborator role.
Users cannot access the model-driven app.	Assign the Basic User role. - Assign the Basic User role. - Assign the Service Reader role. - Assign the Office Collaborator role. - Add the Azure AD Security Group.
Users cannot access the canvas app.	Add users to an Azure AD Security Group. - Assign the System Customizer role. - Assign the Service Reader role. - Add users to the superuser team. - Add users to an Azure AD Security Group.

Answer:

Answer Area

Issue	Resolution
The superuser team cannot set the environment variables.	Assign the System Customizer role. - Assign the System Customizer role. - Assign the Basic User role. - Assign the Service Reader role. - Assign the Office Collaborator role.
Users cannot access the model-driven app.	Assign the Basic User role. - Assign the Basic User role. - Assign the Service Reader role. - Assign the Office Collaborator role. - Add the Azure AD Security Group.
Users cannot access the canvas app.	Add users to an Azure AD Security Group. - Assign the System Customizer role. - Assign the Service Reader role. - Add users to the superuser team. - Add users to an Azure AD Security Group.

Explanation:

Answer Area

Issue	Resolution
The superuser team cannot set the environment variables.	Assign the System Customizer role.
Users cannot access the model-driven app.	Assign the Basic User role.
Users cannot access the canvas app.	Add users to an Azure AD Security Group.

NEW QUESTION: 11

You are working on a project with a logistics company. The company plans to digitally transform its business by using Microsoft Power Platform.

You lead several requirements workshops with stakeholders.

The workshops result in the need for the following solutions:

- * Allow users to place orders, track order status, and receive notifications about order shipments.
- * Provide availability 24 hours a day, excluding scheduled maintenance windows.
- * Support real-time tracking of inventory levels.

You need to categorize each of the captured requirements.

Which category should you use for each requirement? To answer, move the appropriate categories to the correct requirements. You may use each category once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Requirement	Category
Ability to place orders, track order status, and receive shipment notifications	
24-hour availability, excluding scheduled maintenance windows	
Real-time tracking of inventory levels	

Answer:

Requirement	Category
Ability to place orders, track order status, and receive shipment notifications	Functional
24-hour availability, excluding scheduled maintenance windows	Non-functional
Real-time tracking of inventory levels	Functional

Explanation:

Categories	Requirement	Category
Functional	Ability to place orders, track order status, and receive shipment notifications	Functional
Non-functional	24-hour availability, excluding scheduled maintenance windows	Non-functional
	Real-time tracking of inventory levels	Functional

NEW QUESTION: 12

You are a Microsoft Power Platform architect designing a solution.

You must use a custom connector to integrate Power Automate with a data source.

You need to authenticate the connector with the data source.

Which three authentication methods can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Generic OAuth 2.0
- B. Pass-through
- C. Basic authentication
- D. API Key
- E. OpenID Connect (OIDC)

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 13

A company reports the following issues with an existing data management system.

* Users cannot search for specific records by using a user-friendly ID or record identifier.

* Users occasionally enter data into fields that is not required.

* The record form displays all fields. Many of the fields are not used.

You need to ensure that the Power Platform solution will ensure data quality can be properly maintained.

Which component should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Ensure that users can search for specific records by using a unique identifier.

- Business rule
- Autonumber column
- Business process flow
- Duplicate detection rule

You must prevent data entry into columns that do not require entry.

- Business rule
- Real time workflow
- Business process flow
- Duplicate detection rule

Answer:

Requirement	Solution
Ensure that users can search for specific records by using a unique identifier.	- Business rule - Autonumber column - Business process flow - Duplicate detection rule
You must prevent data entry into columns that do not require entry.	- Business rule - Real time workflow - Business process flow - Duplicate detection rule

Explanation:

Requirement	Solution
Ensure that users can search for specific records by using a unique identifier.	▼ - Business rule - Autonumber column - Business process flow - Duplicate detection rule
You must prevent data entry into columns that do not require entry.	▼ - Business rule - Real time workflow - Business process flow - Duplicate detection rule

Box 1: Autonumber column

Autonumber columns are columns that automatically generate alphanumeric strings whenever they are created.

Box 2: Business rule

By combining conditions and actions, you can do any of the following with business rules:

- * Enable or disable columns
- * Set column values
- * Clear column values
- * Set column requirement levels
- * Show or hide columns
- * Validate data and show error messages
- * Create business recommendations based on business intelligence.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/autonumber-fields>

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-create-business-rule>

NEW QUESTION: 14

You are a Power Apps architect for a company. The IT administrator designs a Power Apps app that is ready to be tested. The company uses application lifecycle management (ALM). Each version and solution component must be tracked as it is tested.

You need to recommend a strategy to deploy solutions for the user acceptance testing environment.

What should you recommend?

- A. Use Package Deployer and deploy a managed solution.
- B. Use Package Deployer and deploy an unmanaged solution.
- C. Use Solution Packager and deploy a managed solution.
- D. Use Solution Packager and deploy an unmanaged solution.

Answer: D ([LEAVE A REPLY](#))

Solution Packager is a tool that can unpack a compressed solution file into multiple XML files and other files, so they can be easily managed by a source control system.

Unmanaged solution: An open solution with no restrictions on what can be added, removed, or modified. This is recommended during development of a solution.

C: Managed solution

A completed solution ready to be imported into an organization. Once imported, components can't be added or removed, although they can optionally allow further customization. This is recommended when development of the solution is complete.

Reference:

<https://docs.microsoft.com/en-us/power-platform/alm/solution-packager-tool>

NEW QUESTION: 15

An organization is optimizing its Microsoft Power Platform solution architecture.

The optimization needs to address the following:

- * Label names for option sets and multiselect option sets should be added as separate fields for reporting.
- * Users complain that when a case is assigned to another user, all the activities are also assigned.
- * Some Power BI reports based on Microsoft Dataverse data need near-real-time updating.

You need to recommend a design solution to meet these requirements.

What should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Design
Users report that when a case is assigned to another user, all activities are also assigned.	▼ For each activity entity relationship, set Cascading rules to Configurable Cascading and Assign to Cascade None Do not implement, but train users on best practices for assigning cases. Create a 1:N relationship between the user entity/table and the Activities table.
Some Power BI reports based on Microsoft Dataverse data require near-real-time updates.	▼ Create Power BI reports using the Microsoft Dataverse connector. Implement the Data Export Service; create Power BI reports that point to Microsoft Azure SQL Database. Create Power BI dataflows based on the Microsoft Dataverse connector; point the Power BI report to the dataflows.

Answer:

Requirement

Microsoft

Design

Users report that when a case is assigned to another user, all activities are also assigned.

	▼
For each activity entity relationship, set Cascading rules to Configurable Cascading and Assign to Cascade None	
Do not implement, but train users on best practices for assigning cases.	
Create a 1:N relationship between the user entity/table and the Activities table.	

Some Power BI reports based on Microsoft Dataverse data require near-real-time updates.

	▼
Create Power BI reports using the Microsoft Dataverse connector.	
Implement the Data Export Service; create Power BI reports that point to Microsoft Azure SQL Database.	
Create Power BI dataflows based on the Microsoft Dataverse connector; point the Power BI report to the dataflows.	

Explanation:

Requirement

Users report that when a case is assigned to another user, all activities are also assigned.

Some Power BI reports based on Microsoft Dataverse data require near-real-time updates.

Design

	▼
For each activity entity relationship, set Cascading rules to Configurable Cascading and Assign to Cascade None	
Do not implement, but train users on best practices for assigning cases.	
Create a 1:N relationship between the user entity/table and the Activities table.	
	▼
Create Power BI reports using the Microsoft Dataverse connector.	
Implement the Data Export Service; create Power BI reports that point to Microsoft Azure SQL Database.

NEW QUESTION: 16

You need to identify a product that can perform the functions of the current tools with minimal custom development.

Which product should you use?

- A. Power Apps with an industry accelerator
- B. Dynamics 365 Project Operations
- C. Dynamics 365 Customer Service
- D. Power Apps canvas app with a Microsoft template

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 17

You are designing the security model for a Power Platform solution.

The security model must meet the following requirements:

- * Restrict sharing of data between Power Automate connectors.
- * Ensure that environment administrators only see users who require access in the enabled user list.

You need to recommend security features for the solution.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Requirement**

Feature

Restrict sharing of data between Power Automate connectors	▼ Security group Data loss prevention policy
Ensure that environment administrators only see users who require access in the enabled user list.	▼ Security group Data loss prevention policy

Answer:

**Requirement**

Feature

Restrict sharing of data between Power Automate connectors	▼ Security group Data loss prevention policy
Ensure that environment administrators only see users who require access in the enabled user list.	▼ Security group Data loss prevention policy

Explanation:

Requirement

Feature

Restrict sharing of data between Power Automate connectors

▼

Security group

Data loss prevention policy

Ensure that environment administrators only see users who require access in the enabled user list

▼

Security group

Data loss prevention policy

Box 1: Data loss prevention policy

Data loss prevention (DLP) policies enforce rules for which connectors can be used together by classifying connectors as either Business or Non-Business. If you put a connector in the Business group, it can only be used with other connectors from that group in any given app or flow. Sometimes you might want to block the usage of certain connectors altogether by classifying them as Blocked.

Box 2: Security group

If your company has multiple Microsoft Dataverse environments, you can use security groups to control which licensed users can be a member of a particular environment.

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/wp-data-loss-prevention>

<https://docs.microsoft.com/en-us/power-platform/admin/control-user-access>

NEW QUESTION: 18

You need to recommend a solution to meet user interface requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Solution
Visual representation of gauge readings with minimum and maximum tolerances.	▼ Create and embed a Power BI radial gauge. Create and embed a custom visualization component. Create and embed a standard Power Apps donut chart.
Add visibility to the manufacturing inspection records for onsite technicians.	▼ Configure mobile offline synchronization. Add an inspection order to the work order form Modify the sitemap for Dynamics 365 Field Service.

Answer:

Requirement	Solution
Visual representation of gauge readings with minimum and maximum tolerances.	▼ Create and embed a Power BI radial gauge. Create and embed a custom visualization component. Create and embed a standard Power Apps donut chart.
Microsoft Add visibility to the manufacturing inspection records for onsite technicians.	▼ Configure mobile offline synchronization. Add an inspection order to the work order form Modify the sitemap for Dynamics 365 Field Service.

Explanation:

Requirement	Solution
Visual representation of gauge readings with minimum and maximum tolerances.	▼ Create and embed a Power BI radial gauge. Create and embed a custom visualization component. Create and embed a standard Power Apps donut chart.
Microsoft Add visibility to the manufacturing inspection records for onsite technicians.	▼ Configure mobile offline synchronization. Add an inspection order to the work order form Modify the sitemap for Dynamics 365 Field Service.

Box 1: Create and embed a Power Bi radial gauge

A radial gauge chart has a circular arc and shows a single value that measures progress toward a goal or a Key Performance Indicator (KPI). The line (or needle) represents the goal or target value. The shading represents the progress toward that goal. The value inside the arc represents the progress value. Power BI spreads all possible values evenly along the arc, from the minimum (left-most value) to the maximum (right-most value).

In this example, you're a car retailer tracking the sales team's average sales per month. The needle represents a 140 cars sales goal. The minimum possible average sales is 0 and the maximum is 200. The blue shading shows that the team is averaging approximately 120 sales this month.

Box 2: Add an inspection order to the work order form

You can add inspections to work orders in Dynamics 365 Field Service.

Field Service inspections are digital forms that technicians use to quickly and easily answer a list of questions as part of a work order. The list of questions can include safety protocols, pass-and-fail tests for a customer asset, an interview with a customer, or other audits and assessments performed before, during, or after a work order.

Example:

Reference:

<https://docs.microsoft.com/en-us/power-bi/visuals/power-bi-visualization-radial-gauge-charts>

<https://docs.microsoft.com/en-us/dynamics365/field-service/inspections>

NEW QUESTION: 19

You are implementing a solution that includes applications which perform high-volume Microsoft Dataverse operations.

The applications must not experience a loss of functionality or loss of performance due to service protection API limits.

You need to evaluate metrics for the service protection API limits.

Which three metrics should you evaluate? Each correct answer part of the solution.

NOTE Each correct selection is worth one point.

A. Amount of execution time that can be used for each connection.

B. Number of API requests per connection.

C. Number of concurrent connections per user account.

D. Number of API requests per web server.

E. Amount of API calls made within plug-in code.

Answer: A,B,C ([LEAVE A REPLY](#))

NEW QUESTION: 20

A company has a Power Platform environment that connects to a third-party marketing application.

The company reports that the data in the Power Platform lead table does not match data from the marketing application.

Issues include:

The owner data in the lead table and the third-party application do not match.

The Topic column has more information than the related record from the marketing application.

There are differences in how telephone numbers are formatted.

You need to determine which processes are causing the issues.

Which three processes may be causing the differences observed? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

Issue	Solution
Migration processes fail due to operation timeouts.	▼ Increase multithreading and/or batch size settings. Decrease multithreading and/or batch size settings. Ensure you are loading data into all tables at the same time. Ensure you are loading data into tables in a particular order.
Records that include lookup columns often fail to load.	▼ Increase multithreading and/or batch size settings. Decrease multithreading and/or batch size settings. Ensure you are loading data into all tables at the same time. Ensure you are loading data into tables in a specific order.

Answer:

Issue	Solution
Migration processes fail due to operation timeouts.	▼ Increase multithreading and/or batch size settings. Decrease multithreading and/or batch size settings. Ensure you are loading data into all tables at the same time. Ensure you are loading data into tables in a particular order.
Records that include lookup columns often fail to load.	▼ Increase multithreading and/or batch size settings. Decrease multithreading and/or batch size settings. Ensure you are loading data into all tables at the same time. Ensure you are loading data into tables in a specific order.

Explanation:

Issue	Solution
Migration processes fail due to operation timeouts.	▼ Increase multithreading and/or batch size settings. Decrease multithreading and/or batch size settings. Ensure you are loading data into all tables at the same time. Ensure you are loading data into tables in a particular order.
Records that include lookup columns often fail to load.	▼ Increase multithreading and/or batch size settings. Decrease multithreading and/or batch size settings. Ensure you are loading data into all tables at the same time. Ensure you are loading data into tables in a specific order.

Box 1: Increase multithreading and/or batch size settings

Box 2: Ensure you are loading data in a specific order.

Load the base tables in the hierarchies first.

NEW QUESTION: 21

A company is struggling to gather insights from won and lost opportunities.

Users must be able to access the company's solution from mobile and desktop devices. The solution must meet the following requirements:
context of other related data.

Display data to users as charts and tables and provide drill-through capabilities.

You need to recommend a Power Platform tool to help the client visualize the data.

Which two technologies should you recommend? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Power BI
- B. Power Automate
- C. Power Virtual Agents
- D. Power Apps

Answer: A,D (LEAVE A REPLY)

A: Power BI is a business analytics service by Microsoft. It aims to provide interactive visualizations and business intelligence capabilities with an interface simple enough for end users to create their own reports and dashboards. It is part of the Microsoft Power Platform.

D: Power BI Apps are an easy way for designers to share different types of content at one time. App designers create the dashboards and reports and bundle them together into an app. The designers then share or publish the app to a location where you, the business user, can access it. Because related dashboards and reports are bundled together, it's easier for you to find and install in both the Power BI service (<https://powerbi.com>) and on your mobile device. After you install an app, you don't have to remember the names of a lot of different dashboards or reports because they're all together in one app, in your browser or on your mobile device.

Reference:

<https://docs.microsoft.com/en-us/power-bi/consumer/end-user-apps>

NEW QUESTION: 22

You are implementing a Microsoft Power Platform solution for a customer to include data migration from multiple legacy systems. The data includes lead and contact data. The environment includes an assigned security group.

The following issues have occurred during a go-live deployment attempt:

- * Lookup values are not populated when data migration is complete.
- * Data is being added to the contacts table that is not part of the data migration.
- * Various users do not appear in the list of users available for record assignment.

You need to resolve the go-live deployment issues.

How should you resolve the issue? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Issue

Lookup values are not populated when data migration is complete.

Solution

Split the import data into smaller import batches.

Import the data by using an application user.

Split the import data into smaller import batches.

Disable all Power Automate flows, plug-ins, and workflows.

Run data migration in a specific order.

Data is being added to the contacts table that is not part of the data migration.

Disable all Power Automate flows, plug-ins, and workflows.

Disable auditing.

Import the data by using an application user.

Disable all Power Automate flows, plug-ins, and workflows.

Split the import data into smaller import batches.

Various users do not appear in the list of users available for record assignment.

Add to a security group.

Add to a security group.

Add a security role.

Add a Microsoft 365 role.

Add a field security profile.

Microsoft

Split the import data into smaller import batches.

Disable all Power Automate flows, plug-ins, and workflows.

Add to a security group.

NEW QUESTION: 23

A company plans to implement Microsoft Power Platform to provide data controls. The current implementation is complex and spans multiple environments.

The IT team will implement DLP policies. Members of the team have different security roles applied to their user accounts, depending on their specified level of access.

You need to identify which policies the IT team can apply for the different security roles.

Which policy type should you recommend for each security role? To answer, move the appropriate policy types to the correct security roles. You may use each policy type once, more than once, or not at all.

You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Policy types	Answer Area										
Tenant Environment	<table><thead><tr><th>Security role</th><th>Policy type</th></tr></thead><tbody><tr><td>System Administrator</td><td></td></tr><tr><td>Power Platform Administrator</td><td></td></tr><tr><td>Global Administrator</td><td></td></tr><tr><td>Dynamics 365 Administrator</td><td></td></tr></tbody></table>	Security role	Policy type	System Administrator		Power Platform Administrator		Global Administrator		Dynamics 365 Administrator	
Security role	Policy type										
System Administrator

NEW QUESTION: 24

A company plans to automate business processes by using Power Automate. You identify a subprocess that must be implemented across multiple flows. You need to implement the subprocess so that it is maintainable and easy to navigate. What should you do?

- A. Initiate the subprocess with an instant trigger.
- B. Copy the actions of the subprocess into the flow by using the clipboard.
- C. Save a copy of the subprocess and then add any additional actions into the flow.
- D. Initiate the subprocess with an automated trigger.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 25

You need to select an appropriate app for Relecloud.

Which app should you recommend?

- A. Dynamics 365 Field Service
- B. Dynamics 365 Sales

C. Dynamics 365 Project Operations

D. Dynamics 365 Customer Service

Answer: D (LEAVE A REPLY)

Microsoft Dynamics 365 Customer Service is a module for customer service automation that streamlines case and knowledge management, enables personalized customer service with a 360-degree customer view, and provides visibility into customer service department performance with dashboards and reports.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/customer-service/overview>

NEW QUESTION: 26

A client uses Dynamics 365 Sales, Power BI datasets, and Power BI dataflows.

The Dynamics 365 Sales implementation has security roles that restrict data export. You need to ensure that data has the same restrictions in Power BI as it does in Dynamics 365 Sales.

You need to design the security to avoid sensitive data from being seen.

Which two actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Use Microsoft Dataverse restrictions before setting up the Power BI reports.

B. Limit the role in Dynamics 365 Sales to only data allowed so it cannot be exported to Microsoft Excel.

C. Limit the role and ensure that exporting to Microsoft Excel is not allowed in both Dynamics 365 Sales and Power BI.

D. Share Power BI dashboards only with users who are supported to see this data.

Answer: (SHOW ANSWER)

A: When you share a dashboard or report, the people you share it with can view it and interact with it, but can't edit it. They see the same data that you see in the dashboard and reports and get access to the entire underlying dataset unless row-level security (RLS) is applied to the underlying dataset.

B: Depending on the sensitivity of an organization's data, it is often necessary to disable the ability to export or print reports.

Reference:

<https://docs.microsoft.com/en-us/power-bi/collaborate-share/service-share-dashboards>

NEW QUESTION: 27

You need to recommend solutions to meet the inspection requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Solution
View, assign, and resolve inspection bottlenecks.	▼ Booking rules Schedule board Proficiency models
Automatically input measurement readings from inspection gauges	▼ Custom connector Azure IoT Hub connector Azure IoT Central connector Microsoft Dataverse connector

Answer:

Requirement	Solution
View, assign, and resolve inspection bottlenecks.	▼ Booking rules Schedule board Proficiency models
Automatically input measurement readings from inspection gauges	▼ Custom connector Azure IoT Hub connector Azure IoT Central connector Microsoft Dataverse connector

Explanation:

Box 1: Schedule board

The Dynamics 365 Field Service schedule board provides an overview of resource availability and bookings you can make.

Box 2: Azure IoT Central connector

Information about each machine produced must be transferred to Dynamics 365 Field Service.

The difference between IoT hub and IoT central is that IoT is an application platform that simplifies the creation of Internet of Things solutions. IoT central helps to reduce the challenges of implementing IoT development, operations, and management. IoT Central is a fully managed Software as a Service solution.

Note: There are three ways you can use to connect IoT-enabled devices into the Field Service solution:

* Connected Field Service for Azure IoT Central

* Connected Field Service for Azure IoT Hub

* Connected Field Service for non-Azure IoT providers using the extensible IoT provider framework Reference:
<https://vegibit.com/azure-iot-hub-vs-iot-central>
<https://docs.microsoft.com/en-us/dynamics365/field-service/configure-schedule-board>

NEW QUESTION: 28

You need to design a Power Platform solution that meets the following requirements:

- * Capture data from a row during deletion to be used in an automated process.
- * Use AI to process forms and automate data entry from paper-based forms.

Which requirements can be met by using out-of-the box Power Platform components?

Instructions: For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

	Yes	No
Capture data from a row during deletion to be used in an automated process.	☐	☐
Use AI to process forms and automate data entry from paper-based forms.	☐	☐

Answer:

	Yes	No
Capture data from a row during deletion to be used in an automated process.	☒	☐
Use AI to process forms and automate data entry from paper-based forms.	☒	☐

Explanation:

	Yes	No
Capture data from a row during deletion to be used in an automated process.	☒	☐
Use AI to process forms and automate data entry from paper-based forms.	☒	☐

Box 1: Yes

This can be done with Dataverse flows: The When a row is added, modified or deleted trigger runs a flow whenever a row of a selected table and scope changes or is created.

Box 2: Yes

AI Builder is a Microsoft Power Platform capability that provides AI models that are designed to optimize your business processes. AI Builder enables your business to use AI to automate processes and glean insights from your data in Power Apps and Power Automate.

Reference:

<https://docs.microsoft.com/en-us/power-automate/dataverse/create-update-delete-trigger>

NEW QUESTION: 29

You are performing a fit gap requirements analysis.
You need to select Microsoft Power Platform components to satisfy the requirements.
Which components should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

Requirement

Coordinate long-term end-to-end delivery of financial counseling services to farmers.

Manage project accounting and recognize revenue compliant with international financial reporting standards.

Notify users of their overdue tasks on a daily basis.

NEW QUESTION: 30

A company plans to use Microsoft Power Pages. The company gathers business requirements.

You need to identify the functional requirements.

Which two requirements should you gather? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Azure Front Door and Power Pages must be used to improve caching capabilities.
- B. A Power Pages site must be able to handle 100 concurrent external site visitors.
- C. Users must be able to log in to a Power Pages site by using single sign-on.
- D. Users must be able to submit a service request on a Power Pages site.
- E. Users must be able to control the use of their personal data in Microsoft Dataverse.

Answer: C,D ([**LEAVE A REPLY**](#)**)**

NEW QUESTION: 31

A company is undergoing, digital Transformation.

You must conduct an in-person workshop with several business stakeholders to learn more about the company and its solution requirements. You have limited time to get the information from the stakeholders.

You need to ensure that the workshop is set up for success.

Which two actions should you perform? Each correct answer presents a complete solution. Choose two.

NOTE: Each correct selection is worth one point.

- A. Publish the agenda in advance of the workshop.
- B. Present the proposed solution as part of the workshop.
- C. Explain the technical aspects of the solution to the stakeholders.
- D. Keep to the agenda by minimizing side conversations.

Answer: A,D ([**LEAVE A REPLY**](#)**)**

NEW QUESTION: 32

You are designing an integration between an Azure SQL database and a model-driven app-You have the following requirements:

- * Audit updates to the data.
- * Assign security role access to tables at the user level.
- * Assign security role access to tables at the organization level.
- * Enable change tracking.
- * Add and update data.

You need to implement virtual tables.

Which two requirements can you meet by using virtual tables? Each correct answer presents a complete solution.

NOTE Each correct selection is worth one point.

- A. Assign security role access to tables at the organization level.
- B. Add and update data.
- C. Enable change tracking.
- D. Assign security role access to tables at the user level.
- E. Audit updates to the data.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 33

A new customer asks you to design a solution for a Power Apps app that uses Microsoft Dataverse. The customer wants to keep the service process simple and save on both licensing and development time. You need to recommend solutions for the customer. What should you recommend? To answer, drag the appropriate setting to the correct drop targets. Each source may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point.

Show the app in Microsoft Outlook.

Use Universal Resource Scheduling.

Take notes on a mobile phone and record GPS coordinates automatically.

Solution

Model-driven app

Dynamics 365 Customer Service

Canvas app

Box 1: Model-drive app
Integration with Microsoft Outlook requires a Model-driven app.
Box 2: Dynamics 365 Customer Service

Schedule anything in Dynamics 365 using Universal Resource Scheduling. You can enable scheduling for any entity in Dynamics 365 Sales, Field Service, Customer Service, and Project Service Automation, including custom entities.

Box 3: Canvas app

Reference:

<https://docs.microsoft.com/en-us/dynamics365/common-scheduler/schedule-anything-with-universal-resource-scheduling>

NEW QUESTION: 34

A company has a list of contacts in a Microsoft Excel file. The company wants to load the contact information into a Microsoft Power Platform solution.

You need to recommend a data-loading solution.

What should you recommend?

- A.** Add the contacts to a static worksheet
- B.** Use the Excel Template feature
- C.** Use the import from Excel feature.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 35

You need to recommend a feature that erases agent workloads and resolves reported issues.

What should you recommend?

- A.** Dynamics 365 Customer Service default functionality
- B.** Microsoft AppSource
- C.** Microsoft Store

Answer: A ([LEAVE A REPLY](#))

Scenario: Agents need a way to track reservation issues.

Use Dynamics 365 Customer Service to:

Track customer issues through cases

Reference:

<https://docs.microsoft.com/en-us/dynamics365/customer-service/overview>

NEW QUESTION: 36

You design a Microsoft Power Platform app for a company. The company has the following requirements:

* need to use an off-the-shelf product by an ISV that provides functionality to enable customers to deposit funds into their account

* ability to handle a high number of customers depositing funds into their account during lunchtime hours You need to recommend a solution that meets the requirements. Which components should you recommend?

To answer, select the appropriate options in the answer area.

Answer Area

Requirement
Download compliant ISV solutions.

Verify that the ISV solution will not have issues with high-volume transactions.

NEW QUESTION: 37

You are designing a Power Platform solution.

During quality assurance testing the API limits are reached.

You need to identify and resolve the issue.

Which two actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Allocate Microsoft Dataverse capacity add-on subscriptions.
- B. Use the out-of-the-box User Summary report from the Reports section of the solution's model-driven app.
- C. In the Power Platform admin center Review the Home tab Dataverse analytics dashboard.
- D. In the Power Platform admin center, review the Usage section of the Power Apps analytics dashboard.
- E. In the Power Platform admin center, review the Runs section of the Power Automate analytics dashboard.

Answer: (SHOW ANSWER)

A: When users exceed their limits, administrators can see this in the admin center (see below). You can do either one of the following:

Adjust the app or flow to use fewer API requests

Purchase the Power Apps and Power Automate capacity add-on for your organization.

C: Home (default) Dashboard.

This is the default dashboard that provides information on the number of active Dataverse users, storage usage, the most active workflows, and more.

API Calls: API Calls Number of API calls that were made by the Dataverse environment for the selected time period.

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/api-request-limits-allocations>

<https://docs.microsoft.com/en-us/power-platform/admin/analytics-common-data-service>

NEW QUESTION: 38

You need to recommend solutions to meet the organization's communication needs.

What should you recommend? To answer, drag the appropriate technologies to the correct groups of users.

Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Technologies	Group of users	Technology
Microsoft Teams	First Up employees	
Power Apps portals	Workers	
Microsoft 365 Business Voice		

Answer:

Technologies	Group of users	Technology
Microsoft Teams	First Up employees	Microsoft Teams
Power Apps portals	Workers	Microsoft 365 Business Voice
Microsoft 365 Business Voice		

Explanation:

Group of users	Technology
First Up employees	Microsoft Teams
Workers	Microsoft 365 Business Voice

Box 1: Microsoft Teams

First up employees must be able to contact each other by using a secure system to ask and answer questions about medical cases.

Microsoft Teams key capabilities:

- * Connected
- * Secure
- * Managed
- * Collaborative and productive

Box 2: Microsoft 365 Business Voice

Workers must be able to communicate in near real-time with worker support agents.

Microsoft 365 Business Voice makes it easy for small and medium organizations to turn Microsoft Teams into a powerful and flexible telephone system. It's a replacement for traditional telephony providers and in- house phone systems that can be difficult and costly to manage.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/solutions/empower-people-to-work-remotely>

<https://docs.microsoft.com/en-us/microsoftteams/business-voice/whats-business-voice>

NEW QUESTION: 39

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company uses a Microsoft Power Platform application.

Employees report that they are unable to open the application.

You need to ensure that the employees can access the application.

Solution: Add the employees to the user table in the environment.

Does the solution meet the goal?

A. Yes

B. No

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 40

You are designing a database table for a client.

You have the following requirements:

- * Maintain a comprehensive list of colors and their corresponding RGB values and hexadecimal values.

- * Prevent the addition of duplicate colors based on the hexadecimal value for the color.

You need to recommend a design for the table.

Which two actions should the client perform after the table is created? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Mark the hex value column as business required.

B. Configure and schedule a recurring bulk record deletion job.

C. Create alternate keys for the table.

D. Mark the RGB value column as business required.

Answer: A,C ([LEAVE A REPLY](#))

B: Setting a column to Business Required means that the default behavior of a model-driven or canvas app will enforce this requirement in the app.

C: With alternate keys you can now define a column in a Dataverse table to correspond to a unique identifier (or unique combination of columns) used by the external data store. This alternate key can be used to uniquely identify a record in Dataverse in place of the primary key. You must be able to define which columns represent a unique identity for your records. Once you identify the columns that are unique to the table, you can declare them as alternate keys through the customization user interface (UI) or in the code.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-field-portal>

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/define-alternate-keys-entity>

NEW QUESTION: 41

A company plans to auto-populate the Name column on a row based on other text columns on the row. The company requires this to happen immediately and without needing to refresh the form. You need to recommend a solution. What should you recommend that the company use?

A. Power Automate flow

B. Background classic workflow

C. Business rule

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 42

A company plans to create a Power Apps portal to manage support cases for customers. The company has an account hierarchy for customers. The hierarchy supports accounts, cases, and contacts where both contacts and cases belong to their relevant account.

The company has the following requirements:

- * Portal users must only see the notes for the cases that they manage.
- * Portal users must only see cases that are submitted by their colleagues.

You need to design the security model for the portal.

Which entity permission scope should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Scope
Portal users must only see the notes for the cases that they manage.	Self Parent Contact Account
Portal users must only see cases that are submitted by their colleagues.	Self Global Contact Account

 Microsoft

Answer:

Requirement	Scope
Portal users must only see the notes for the cases that they manage.	▼ Self Parent Contact Account
Portal users must only see cases that are submitted by their colleagues.	▼ Self Global Contact Account

Explanation:

Requirement	Scope
Portal users must only see the notes for the cases that they manage.	▼ Self Parent Contact Account
Portal users must only see cases that are submitted by their colleagues.	▼ Self Global Contact Account

Box 1: Contact

With Contact scope, a signed-in user in the role for which the permission record is defined will have the rights granted by that permission only for records that are related to that user's contact record via a defined relationship.

Box 2: Account

With Account Scope, a signed-in user in the role for which the permission record is defined will have the rights granted by that permission only for records that are related to that user's parent account record via a defined relationship.

This scope means that the entity list will only show the records of the selected entity that are associated to the user's parent account. For example, if an entity permission allows Read access to Lead entity with the Account scope, the user having this permission can view all the leads of only the parent account of the user.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/portals/configure/assign-entity-permissions>

NEW QUESTION: 43

You are designing a Microsoft Power Platform solution for an automobile parts manufacturer. You create the following tables:

Table	Comments
Assemblies	For each assembly record, there will be one or more rows in the Parts table. When the ownership for an assembly record changes, the related parts records must be updated.
Parts	Rows in the Parts table must not be deleted when an assembly is deleted.

You need to recommend a relationship behavior.

Which relationship behavior should you recommend?

- A. Referential, Restrict Delete
- B. Custom
- C. Parental
- D. Referential, Remove Link

Answer: B (LEAVE A REPLY)

Restrict Delete: Prevent the Referenced table record from being deleted when referencing tables exist.

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/data-platform/configure-entity-relationship-cascading-behavior>

NEW QUESTION: 44

You need to create an Agent security role.

Which three actions should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Add security to the seat entity and assign users to the Agents role.
- B. Add security to the Core Records and assign users to the Customer Service Representative role.
- C. Copy the Microsoft Dataverse Basic User role.
- D. Rename the Customer Service Representative role to Agents.
- E. Copy the Customer Service Representative role.
- F. Name the new role Agents.

Answer: (SHOW ANSWER)

Scenario: The security rule for agents must contain the privileges in the default Customer Service Representative security role.

Create a security role by Copy Role:

Step 1 (E): Copy the Customer Service Representative role.

Step 2 (F): Select the New Role Name.

Step 3: (B): When Copying Role is complete, navigate to each tab, ie Core Records, Business Management, Customization, etc.

Set the privileges on each tab.

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/create-edit-security-role>

Topic 1, Relecloud

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

Relecloud provides regional air service in North America. The company uses a variety of systems, apps, and services to manage the business. You are hired to design a new solution to manage passenger information, reservations, and maintenance.

Current environment

- * The company uses Microsoft Office 365.
- * The company has a custom app for managing and tracking passenger luggage. The app uses Microsoft Dataverse.
- * For flights longer than four hours, passengers receive a meal. Customers can select a meal when they make a reservation and can save the meal choices as a customer preference.
- * The company offers two types of meals: standard and vegetarian. Meal types can be temporarily unavailable. The airline is considering offering other meal types, such as gluten-free and low-sodium options.
- * The company uses paper-based reservation checklists to help ensure that all the steps for a reservation are complete.
- * The company uses vendors to service aircraft.

Environment

- * Ensure that employees can sign in to all Microsoft apps by using one set of credentials per employee.
- * Minimize the use of third-party products and custom development.
- * Reduce customer support call volumes by having the system automatically resolve common issues.
- * The security rule for agents must contain the privileges in the default Customer Service Representative security role.
- * Log issues as cases. The case form must show variable sections based on the case type. Include a custom entity named Seats and grant agents access to the entity.
- * Application use layout should be role specific.

Agents

- * You must standardize the format used by agents to enter customer phone numbers.
- * Agents need a solution to replace paper reservation checklists.
- * Agents need dashboards to show a current count of all reservations on the entity.
- * Agents need a way to track reservation issues.
- * Agents need a visual indicator in the interface to determine the reservation step to provide a seamless customer experience.
- * Agents need different versions of cancellation policies to send customers. One version must be controllable within the system.
- * Agents need to view which pieces of luggage match to each passenger, and then need to add the total on the passenger record.

IT

- * IT staff needs a mobile solution to see IT cases at the top of the menu since this is their primary focus.
- * IT staff needs a system that is easy to navigate to active cases.
- * IT specialists want to design Power BI reports. They need to understand the underlying table relationships of the system.
- * IT specialists need a solution that is visual rather than text-based so they can quickly complete their tasks.

Management

- * Management requires paginated reports for stakeholders.
- * Management wants to provide frequent flyers with better service when the flyers call.
- * Managers need to see all customer dashboards at the top of their menu on their mobile device.

Maintenance

- * Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.
- * Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.
- * Contracts with maintenance companies must be stored in Dynamics 365 Customer Service.

NEW QUESTION: 45

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

A company uses a Microsoft Excel sheet to manage its loan application process.

The company wants to optimize the process.

You need to discover inefficiencies in the process.

Solution: Record the actions required to complete the loan application process in the process advisor feature.

Use task mining to discover inefficiencies in the process.

Does the solution meet the goal?

A. No

B. Yes

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 46

A company is creating a Microsoft Power Platform app to enable employees to log daily time entries.

Employee user accounts are in multiple Azure AD tenants and are not located in the tenant that is running the app.

Employees must be added as Azure AD guest accounts within the tenant that will be running the app.

Employees must access the model-driven app by being a member of a security team. The security team has been assigned the Employee Security role. Employees must create personal views of records to view within the system.

You need to implement a security solution.

Which privilege should you use?

A. Shared app access

B. Direct basic level

C. Azure AD security group

D. Team

Answer: D ([LEAVE A REPLY](#))

Valid PL-600 Dumps shared by Actual4test.com for Helping Passing PL-600 Exam! NEW QUESTION: 47

A company plans to use Microsoft Power Platform.

The company wants to enhance the user experience of its apps. The company requires a reusable custom color picker control that can be added to model-driven app forms and canvas app screens.

You need to recommend a solution.

Which solution should you recommend?

A. Web resources

B. Power Apps component framework

C. Client script

D. Plug-ins

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 48

A nationwide retailer is streamlining its warehouse operations by using a custom Microsoft Power Platform solution. The retailer plans to migrate its existing data to Microsoft Dataverse.

The retailer provides the following data solution requirements:

- * Dispatchers are responsible for the storage, handling, and transportation of goods to and from the warehouses.
- * Dispatchers will own order records and any associated order lines after an order ships.
- * The floor manager requires a consolidated view of the total order revenue for each order.
- * The remaining inventory on hand must be available on each order line for the shipped product.
- * All staff must take photos if they observe a hazard in a warehouse. These photos must be added to a folder and shared with regional managers.

You need to design the data solution.

Which data solution component should you use for each requirement? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Data solution requirements

Requirement	Solution component
Total order revenue	Rollup column
	Calculated column
	Choice column
	Rollup column
	Whole number column
Inventory on hand	Whole number column
	Autonumber column
	Key column
	Rollup column
	Whole number column
Photos of hazards	File column
	File column
	Rollup column
	Text Area column
	Sharepoint document library

Microsoft

Answer:

Data solution requirements

Requirement	Solution component
Total order revenue	Rollup column
Inventory on hand	Whole number column
Photos of hazards	File column

Explanation:

Data solution requirements

Requirement	Solution component
Total order revenue	Rollup column
Inventory on hand	Whole number column
Photos of hazards	File column

NEW QUESTION: 49

You are a Microsoft Power Platform architect designing integrations for a project. You have the following integration requirements:

- * Post requests to a system that is not always available and limited in its ability to process high volumes of messages.
- * Allow peer-to-peer communication between on-premises services and cloud-based model-driven Microsoft Power Platform apps.
- * Stream large volumes of data from the company's website to a live Power BI dashboard.
- * Support enterprise-level integrations with Dynamics 365 that can be billed on a consumption basis.

You need to use an Azure service for the integration requirements.

Which Azure services should you use? To answer, select the appropriate options in the answer area?

NOTE: Each correct selection is worth one point.

Answer Area

Requirement	Service
Post requests to a system that is not always available and limited in its ability to process high volumes of messages.	Azure Service Bus Azure Service Bus Azure Notification Hub Azure Active Directory Azure ExpressRoute
Allow peer-to-peer communication between on-premises services and cloud-based model-driven Microsoft Power Platform apps.	Azure Relay Azure Relay Azure SQL Azure Cognitive Services Azure API Management
Stream large volumes of data from the company's website to a live Power BI dashboard.	Azure Event Hubs Azure Event Hubs Azure Service Bus Azure SQL
Support enterprise-level integrations with Dynamics 365 that can be billed on a consumption basis.	Azure Functions Azure Logic Apps Azure Functions Azure Service Bus

Answer:

Answer Area

Requirement	Service
Post requests to a system that is not always available and limited in its ability to process high volumes of messages.	Azure Service Bus Azure Service Bus Azure Notification Hub Azure Active Directory Azure ExpressRoute
Allow peer-to-peer communication between on-premises services and cloud-based model-driven Microsoft Power Platform apps.	Azure Relay Azure Relay Azure SQL Azure Cognitive Services Azure API Management

NEW QUESTION: 50

A car dealership has a custom financing table.

You are working with a developer to add a button to a ribbon that displays a hidden section of a form when specific criteria are met.

You need to recommend tools and technologies for the developer

Which two tools or technologies should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point

- A. Write a business rule.
- B. Write JavaScript code.
- C. Use the Ribbon Workbench.
- D. Use the form editor.

Answer: B,C (LEAVE A REPLY)

Client-side scripting using JavaScript is one of the ways to apply custom business process logic for displaying data on a form in a model-driven app.

You can use a community tool, Ribbon Workbench, to visually edit ribbons using the UI.

Reference:

<https://docs.microsoft.com/en-us/powerapps/developer/model-driven-apps/client-scripting>

<https://docs.microsoft.com/en-us/powerapps/developer/model-driven-apps/customize-commands-ribbon>

NEW QUESTION: 51

A company plans to transition from an existing proprietary solution to a Power Platform solution. The company is consolidating data from several sources.

The company reports the following data quality issues with the existing solution:

- * Users often encounter a character limit when entering data.
- * The database includes multiple instances of duplicate records.

You need to recommend solutions to ensure that the data quality issues are not present in the Power Platform solution.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Issue	Solution
Users often encounter a character limit when entering data.	Define a data mask. Define and implement duplicate detection rules. Define the data type and format for each column.
The database includes multiple instances of some records.	Define requirements for data entry. Define and implement duplicate detection rules. Define the data type and format for each column.

Answer:

Issue	Solution
Users often encounter a character limit when entering data.	Define a data mask. Define and implement duplicate detection rules. Define the data type and format for each column.
The database includes multiple instances of some records.	Define requirements for data entry. Define and implement duplicate detection rules. Define the data type and format for each column.

Explanation:

Issue	Solution
Users often encounter a character limit when entering data.	Define a data mask. Define and implement duplicate detection rules. Define the data type and format for each column.
The database includes multiple instances of some records.	Define requirements for data entry. Define and implement duplicate detection rules. Define the data type and format for each column.

Box 1: Define the data type and format for each column

Increase the data type size of the column.

Box 2: Define and implement duplicate detection rules

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/set-up-duplicate-detection-rules-keep-data-clean>

NEW QUESTION: 52

You are designing a model-driven app that allows a company to manage sales opportunities.

The company has a complex security model that includes the following requirements:

The vice president of sales must be able to see opportunities for sales managers and sales representatives.

Sales managers must be able to see opportunities for all sales representatives.

Sales representatives must only see opportunities that they own.

You need to recommend security tools for controlling user access.

Which two tools should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Account hierarchy

B. Field security profile

C. Position hierarchy

D. Security roles

Answer: ([SHOW ANSWER](#))

With the position hierarchy security, a user at a higher position has access to the records owned by a lower position user or by the team that a user is a member of, and to the records that are directly shared to the user or the team that a user is a member of.

The hierarchy security model is an extension to the earlier security models that use business units, security roles, sharing, and teams. It can be used in conjunction with all other existing security models.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/customerengagement/on-premises/developer/security-dev/hierarchical-security-control-access-entities>

NEW QUESTION: 53

You need to recommend an environment for the inspection solution.

Where should you recommend installing the solution?

A. in a separate Microsoft Dataverse environment in the same instance as the Dynamics 365 Field Service environment

B. within the Dynamics 365 Field Service environment

C. within the default Dynamics 365 Field Service environment

D. in a separate Dataverse environment with Dynamics 365 apps enabled

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 54

You are a Microsoft Power Platform architect reviewing requirements for an online shopping app.

You need to identify requirement types for the app.

How should you categorize the requirements? To answer, drag the appropriate categories to the correct requirements. Each category may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content NOTE; Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION: 55

You are designing a Microsoft Power Platform solution.

The solution requires Microsoft Power Platform components and custom coding.

You need to describe the benefits of using Microsoft AppSource.

Which are three benefits of AppSource? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Reduced coding efforts because anyone can publish in AppSource.
- B. Free trial before committing to any additional costs.
- C. App uptime of at least 99.9 percent.
- D. Microsoft Entra ID federated single sign-on (SSO).
- E. Microsoft standardized license agreement and privacy policy.

Answer: B,D,E ([LEAVE A REPLY](#))

NEW QUESTION: 56

A company plans to use a combination of model-driven and canvas apps for data interaction and Power BI for data reporting. The company has the following requirements:

- * Share a canvas app with the auditor team.
- * Ensure account balance values in Power BI are only viewable by the investment team.
- * Streamline user administration and role assignment.

You need to recommend a security component to use for each requirement.

Which security components should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Requirement	Security component
Share a canvas app.	Microsoft Entra ID security group Security roles Column-level security Manager hierarchy model Microsoft Entra ID security group
Control account balance visibility.	Report access Report access Column-level security Microsoft Entra ID security group
Streamline user administration and role assignment.	Manager hierarchy model Security roles Column-level security Manager hierarchy model Microsoft Entra ID security group

Answer:

Answer Area

Requirement

Share a canvas app.

Control account balance visibility.

Streamline user administration and role assignment.

Report access

Manager hierarchy model

NEW QUESTION: 57

You need to resolve the issue reported during testing.

What should you do?

- A. Create an image data type within the Inspection Order table.
- B. Create a relationship within the Inspection Order table to the originating inspection order.
- C. Create a Quick View form for the inspection order.

Answer: B ([LEAVE A REPLY](#))

Need to store the image in the table.

Scenario: The company uses photos of employees to generate employee badges. Photos are uploaded into Microsoft 365 user profiles.

NEW QUESTION: 58

You are designing a Microsoft Power Platform solution that will include multiple applications.

You have the following requirements:

- * Support agents managing cases.
- * Project managers reviewing and updating their projects.
- * Stock managers managing warehouses.
- * New site visitors self-registering.
- * Employees tracking time entries.

Which three requirements can you meet by implementing role-based applications? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A.** Stock managers managing warehouses.
- B.** Staff tracking time entries.
- C.** New site visitors self-resisting.
- D.** Project managers reviewing and updating their projects.
- E.** Support agents managing cases.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 59

You are designing the data model for a school. The school wants to track students' enrollments in courses.

The system must meet the following requirements:

Track the courses in which each student is enrolled.

Track the students that are enrolled in each course.

Track dates when each student enrolled in each course and the person who approved the enrollment.

Allow users to create a report that details which students are enrolled in which courses.

You need to recommend a data model that will fit the school's requirements.

Which logical model should you recommend?

A. Option A

B. Option B

C. Option C

D. Option D

Answer: A ([LEAVE A REPLY](#))

Need a relationship table.

N:N (Many-to-Many): A table relationship that depends on a special Relationship table, sometimes called an Intersect table, so that many rows of one table can be related to many rows of another table.

When viewing rows of either table in a N:N relationship you can see a list of any rows of the other table that are related to it.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-entity-relationships>

NEW QUESTION: 60

You need to configure Microsoft Dataverse to retrieve external data for the sales and construction departments.

Which connection methods should you use?

To answer, move the appropriate connection methods to the correct requirements. You may use each connection method once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

The screenshot shows the Microsoft Dataverse connection methods configuration interface. On the left, there is a list of connection methods: connector, dataflow, and virtual table. On the right, there are two requirements listed: 'Retrieve data from the third-party marketing data source.' and 'Retrieve data from the supplier data source.'.

Answer:

Explanation:

NEW QUESTION: 61

A company has a list of contacts in a Microsoft Excel file. The company wants to load the contact information into a Power Platform solution.

You need to recommend a data-loading solution.

What should you recommend?

- A. Use the Excel Template feature.
- B. Add to an existing list of contacts in a static worksheet.
- C. Use the import from Excel feature.

Answer: A (LEAVE A REPLY)

Import data that's stored somewhere else into your model-driven app using the import feature in Power Apps.

Every table has required columns that must exist in your input file. It's recommended that you download an Excel template, add your data, and then import the file to your app. The template saves time and effort. Don't add or modify columns in the template to avoid issues during the import.

Note:

Step 1: Download an Excel template

To avoid mapping issue, it's recommended that you use an Excel template that you can download from your app. Once the template is downloaded add your data and then import the file back to your app.

Remember don't add or modify columns in the template to avoid issues during the import process.

Step 2: Import your data

Use the template that you downloaded in the previous step (modified with your data) and import the file to your app.

Reference:

<https://docs.microsoft.com/en-us/powerapps/user/import-data>

NEW QUESTION: 62

You are designing a Microsoft Power Platform solution that will be deployed to two separate companies in the same Microsoft Office 365 tenant: Contoso, Ltd. and Contoso Pharmaceuticals.

The solution must meet the following security requirements:

- * Restrict Contoso, Ltd. users from seeing the Contoso Pharmaceuticals company.
- * Restrict access to specific forms.
- * Restrict access to specific tables.

What should you recommend? To answer, drag the appropriate security types to the correct restrictions. Each security type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

NEW QUESTION: 63

You are designing a Microsoft Power Platform solution for a company.

Which components should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Component

Allow users to change the status of a record only if a custom column named Reason is populated.

	▼
Business rule	
Power Automate flow	
Asynchronous plug-in	
Background workflow	

Prompt users to update each opportunity product record when an opportunity is won or lost.

	▼
JavaScript code	
Real-time workflow	
Power Automate flow	
Asynchronous plug-in	

Answer:

Allow users to change the status of a record only if a custom column named Reason is populated.

▼

- Business rule
- Power Automate flow
- Asynchronous plug-in
- Background workflow

Prompt users to update each opportunity product record when an opportunity is won or lost.

▼

- JavaScript code
- Real-time workflow
- Power Automate flow
- Asynchronous plug-in

Explanation:

Requirement

Component

Allow users to change the status of a record only if a custom column named Reason is populated.

▼

- Business rule
- Power Automate flow
- Asynchronous plug-in
- Background workflow

Prompt users to update each opportunity product record when an opportunity is won or lost.

▼

- JavaScript code
- Real-time workflow
- Power Automate flow
- Asynchronous plug-in

Box 1: Business rule

You can create business rules and recommendations to apply logic and validations without writing code or creating plug-ins. Business rules provide a simple interface to implement and maintain fast-changing and commonly used rules.

Box 2: Power Automate flow

Trigger the Power Automate flow with "When a record is updated", then add a Condition in the flow and configure it with Status Label equals to Won.

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/data-platform-create-business-rule>

<https://www.inogic.com/blog/2021/12/how-to-win-lose-dynamics-365-crm-opportunity-through-power-automate-flow/>

NEW QUESTION: 64

A company plans to implement a model-driven app. The company has the following requirements:

- * Short Message Service (SMS) data must be visible on the model-driven app timeline.
- * Store location data must be referenced from a SQL server database.
- * Customer data must be audited and only edited by specific users.

You need to recommend the table type for each requirement.

Which table types should you recommend? To answer, drag the appropriate solutions to the correct requirements. Each solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Solutions

Virtual – organization owned	SMS data	Activity – user or team owned
Custom – user or team owned	Store location data	Custom – organization owned
Custom – organization owned	Customer data	Custom – user or team owned
Activity – user or team owned		

NEW QUESTION: 65

You need to recommend methods for assigning security to each group of users.

The customer provides the following requirements:

- * Customers need the ability to submit a case through an online portal.
- * Portal must handle 75 concurrent users submitting cases.
- * Service data must be retained for at least six years.

You need to determine which requirements are functional or non-functional.

Which requirements are functional or non-functional? To answer, drag the appropriate types to the correct requirements. Each type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Types	Requirement	Type
Functional	Customers need the ability to submit a case through an online portal.	
Non-functional	Portal must handle 75 current users submitting cases.	
	Service data must be retained for at least six years.	

Answer:

Types	Requirement	Type
Functional	Customers need the ability to submit a case through an online portal.	Functional
Non-functional	Portal must handle 75 current users submitting cases.	Non-functional
	Service data must be retained for at least six years.	Non-functional

Explanation:

Requirement	Type
Customers need the ability to submit a case through an online portal.	Functional
Portal must handle 75 current users submitting cases.	Non-functional
Service data must be retained for at least six years.	Non-functional

Box 1: Functional

Functional requirements describe what the solution needs to do or its behaviors.

Box 2: Non-functional

Non-functional requirements commonly describe non-behavior aspects of the solution such as performance requirements.

Box 3: Non-functional

Examples of common non-functional requirement types include:

- * Availability
- * Compliance/regulatory
- * Data retention/residency
- * Performance (response time, and so on)
- * Privacy
- * Recovery time
- * Security
- * Scalability

Reference:

<https://docs.microsoft.com/en-us/learn/modules/work-with-requirements/3-functional-requirements>

<https://docs.microsoft.com/en-us/learn/modules/work-with-requirements/4-non-functional-requirements>

NEW QUESTION: 66

You need to recommend solutions to meet the integration requirements.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Solution
View, assign, and resolve inspection bottlenecks.	▼ Booking rules Schedule board Proficiency models
Automatically input measurement readings from inspection gauges	▼ Custom connector Azure IoT Hub connector Azure IoT Central connector Microsoft Dataverse connector

Answer:

Requirement	Solution
View, assign, and resolve inspection bottlenecks.	▼ Booking rules Schedule board Proficiency models
Automatically input measurement readings from inspection gauges	▼ Custom connector Azure IoT Hub connector Azure IoT Central connector Microsoft Dataverse connector

Explanation:

Requirement	Solution
View, assign, and resolve inspection bottlenecks.	Booking rules Schedule board Proficiency models
Automatically input measurement readings from inspection gauges	Custom connector Azure IoT Hub connector Azure IoT Central connector Microsoft Dataverse connector

Box 1: Schedule board

Note: The Dynamics 365 Field Service schedule board provides an overview of resource availability and bookings you can make. When you're looking at the schedule board for the current day, you'll see a blue line that indicates the current time of day. You can also see a picture of all the resources listed on the schedule board. To quickly view contact information for a resource, hover over their name to view the contact card.

Box 2: Azure IoT Central connector

Azure IoT Central makes it easy to connect, monitor, and manage your IoT devices at scale. With the IoT Central V3 connector, you can trigger workflows when a rule has fired, and take actions by executing commands, updating properties, getting telemetry from devices, and more. Use this connector with your Azure IoT Central V3 application. This connector is available in the following products and regions:

Service	SKU	Regions
Logic Apps	Standard	All Logic Apps regions except the following: - Azure Government regions - Azure China regions
Power Automate	Premium	All Power Automate regions except the following: - US Government (GCC) - US Government (GCC High) - China Cloud operated by 21Vianet
Power Apps	Premium	All Power Apps regions except the following: - US Government (GCC) - US Government (GCC High) - China Cloud operated by 21Vianet

<https://docs.microsoft.com/en-us/dynamics365/field-service/configure-schedule-board>

<https://docs.microsoft.com/en-us/azure/iot-hub/about-iot-hub>

Topic 4, VanArsde1, Ltd

Background

VanArsde1, Ltd. builds custom homes. The company has one Azure tenant and uses multiple systems to manage the sales, construction, and warranties of the homes.

The company has three departments: sales, construction, and warranty. Sales, contract, and warranty information is not shared among the departments.

The owner of VanArsde1, Ltd. requires a consolidated system that the company can use to track each home's progress.

Sales

- * Company employees use Microsoft Outlook for all communications.
- * Company employees use Microsoft Word to create sales contracts.
- * Employees in the sales department are frequently in different locations and work different hours from each other.
- * Employees in the sales department use a Contracts team in Microsoft Teams to collaborate.
- * The company uses a third-party marketing tool to update contacts every day.

Current environment

- * Contacts' names must be formatted before they are imported from the third-party marketing tool.
- * The company must retain contracts for five years.
- * The company requires that the sales department display the All Contracts view in Microsoft Teams.
- * All contract information must be stored in the All Contracts view.
- * Contracts must not be lost if a device is lost or stolen.

Issue

- * Employees in the sales department store contracts on their local computers.
- * The construction team receives a copy of a contract only when the sale of a home is complete.

Construction

Current environment

- * Employees in the construction department use Project Online to manage schedules.
- * Employees in the construction department use Microsoft Excel to manage the costs of projects

* The main supplier of construction materials provides an API to the company. The company uses the API to manage supplies for projects in near real time.

Requirements

* Employees in the construction department must be able to demonstrate how their work is performed rather than document their process.

* The company requires that project schedules be created less than a week after a contract is signed.

* A field must sum up the costs of the materials.

Issues

* Employees in the construction department are unable to schedule resources because they are not informed of future projects.

* Employees in the construction department currently enter basic project information manually for each software application.

Warranty

Current environment

* Employees in the warranty department use Excel to track project issues and resolutions.

* The company requires that employees in the warranty department meet with each other in person to discuss their job roles.

Requirements

* The company requires that warranty claims be resolved in less than a month.

* The company requires that all claims be entered in the system along with their related issues.

* If a claim is found to be invalid, the company requires that the claim and its related issues be deleted.

Issue

* Employees in the warranty department report that they are frequently sent to homes without knowledge of what is in scope for the project.

General

Requirements

* The new system must use the development and production environments

* The development environment must be the master of all changes.

* All table changes must be added to a solution. Changes to the solution must not be allowed to be made in the production environment.

* Each department must have a custom app. Employees must be able to access only their department's app.

* All sales, contract, and warranty data must be shared among the departments.

* The project manager must be solely responsible for creating and owning the deployment plan for projects.

* All projects must run by using the Agile methodology.

* The deployment plan must include the environment setup, training plan, rollout strategy, and deployment support.

Issue

The IT manager reports that the deployment plan is not complete.

NEW QUESTION: 67

A company plans to use Microsoft Power Platform.

The company needs to understand how API requests are used so that its solution can be designed within the API limits granted by Microsoft. The company requires the following information:

* How API limits are allocated

* Which Microsoft Power Platform components count toward its API limits

* Which Power Automate flow steps count toward API limits

You need to describe the API allocation for each design consideration.

Which API allocations should you identify? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Design consideration

How API limits are allocated

Which Microsoft Power Platform components count toward API limits

Which Power Automate flow steps count toward API limits

API allocation

By license
By app
By tenant
By license
By environment

Dataverse, Power Apps, and Power Automate
Dataverse, Power Apps, and Power BI
Power Apps, Power BI, and Power Pages
Dataverse, Power Apps, and Power Automate

Each step counts as one API request.
Each step counts as one API request.
Each flow run counts as one API request.
Only successful steps count as one API request.
Only successful flows count as one API request.

Answer:

Answer Area

Design consideration

How API limits are allocated

Which Microsoft Power Platform components count toward API limits

Which Power Automate flow steps count toward API limits

API allocation

By license
By app
By tenant
By license
By environment

Dataverse, Power Apps, and Power Automate
Dataverse, Power Apps, and Power BI
Power Apps, Power BI, and Power Pages
Dataverse, Power Apps, and Power Automate

Each step counts as one API request.
Each step counts as one API request.
Each flow run counts as one API request.
Only successful steps count as one API request.
Only successful flows count as one API request.

Explanation:

Answer Area

Dataverse, Power Apps, and Power Automate

Each step counts as one API request.

NEW QUESTION: 68

You are implementing a model-driven app for a national chain of retail stores. You have the following requirements:

- * Store employees must be able to view data for their store only.
- * Regional managers must be able to view data for all stores in a region.
- * The reporting team must be able to view all data across all stores.

You need to configure system security.

Which three security methods should you use? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Microsoft Entra ID security group
- B. Security roles
- C. Manager hierarchy
- D. Owner teams
- E. Account hierarchy

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 69

You are designing data loss policies for a Microsoft Power Platform implementation. You have the following requirements:

- * Solutions that use the HTTP connector must not include any other connectors.
- * Prevent the use of the Microsoft Forms connector.
- * Allow the use of the Azure DevOps connector.

You need to determine in which data policy group to add each connector.

Data policy groups	Connector	Data policy group
Business	HTTP connector	
Non-business	Azure DevOps connector	
Blocked	Microsoft Forms connector	

Answer:

Explanation:

Box 1: Business

If you put a connector in the Business group, it can only be used with other connectors from that group in any given app or flow.

Box 2: Non-business

DLP policies enforce rules for which connectors can be used together by classifying connectors as either Business or Non-Business.

Box 3: Blocked

Sometimes you might want to block the usage of certain connectors altogether by classifying them as Blocked.

Data policy group Business blocked

<https://docs.microsoft.com/en-us/power-platform/admin/wp-data-loss-prevention>

NEW QUESTION: 70

An automobile parts manufacturer wants to replace an existing system with a Microsoft Power Platform solution. The company has been experiencing undesired data changes in their current system. The cause of the changes is due to the relationships that are set up between tables in the database that the system uses.

The new solution must meet the following requirements:

- * Track vehicle manufacturers and models.
- * Display a list of all models that a manufacturer produces.

- * Ensure that each vehicle model can be associated to only one manufacturer.
- * Delete all associated models when a user deletes a manufacturer.
- * Automatically populate information from the manufacturer when creating a new model from the model list on the manufacturer page.

You need to recommend table relationships to meet the business requirements.

Which relationship settings should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Business requirement	Relationship
The system must delete all associated models when a user deletes a manufacturer.	Use a parental 1:N relationship between manufacturer and model. Use a parental 1:N relationship between manufacturer and model. Use a referential 1:N relationship between manufacturer and model. Use field mappings in 1:N relationship between manufacturer and model. Use an N:N relationship between manufacturer and model.
The system must auto-populate information from the manufacturer when creating a new model from the model list on the manufacturer page.	Use field mappings in 1:N relationship between manufacturer and model. Use a parental 1:N relationship between manufacturer and model. Use a referential 1:N relationship between manufacturer and model. Use field mappings in 1:N relationship between manufacturer and model. Use an N:N relationship between manufacturer and model.

Answer:

Business requirement	Relationship
The system must delete all associated models when a user deletes a manufacturer.	Use a parental 1:N relationship between manufacturer and model. Use a parental 1:N relationship between manufacturer and model. Use a referential 1:N relationship between manufacturer and model. Use field mappings in 1:N relationship between manufacturer and model. Use an N:N relationship between manufacturer and model.
The system must auto-populate information from the manufacturer when creating a new model from the model list on the manufacturer page.	Use field mappings in 1:N relationship between manufacturer and model. Use a parental 1:N relationship between manufacturer and model. Use a referential 1:N relationship between manufacturer and model. Use field mappings in 1:N relationship between manufacturer and model. Use an N:N relationship between manufacturer and model.

Explanation:

Answer Area

Business requirement

The system must delete all associated models when a user deletes a manufacturer.

The system must auto-populate information from the manufacturer when creating a new model from the model list on the manufacturer page.

Relationship

Use a parental 1:N relationship between manufacturer and model.

Use field mappings in 1:N relationship between manufacturer and model.

NEW QUESTION: 71

You are a Microsoft Power Platform architect supporting the go-live phase of a canvas app. The canvas app accesses data on-premises and in the cloud.

Users are reporting the app is very slow to respond, especially upon initial launch.

You need to optimize the performance of the app.

Which three actions should you complete? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Review the settings of the data gateway for on-premises data sources.
- B. Reduce data row limits.
- C. Move data calls from the Onload event to the OnStart event.
- D. Increase data row limits.
- E. Move data calls from the OnStart event to the Onload event.

Answer: A,B,E ([LEAVE A REPLY](#))

NEW QUESTION: 72

A company plans to integrate a model-driven app with external data sources. The company has the following requirements:

- * Consume data in its data warehouse from Microsoft Dataverse.
- * Use a plug-in to retrieve information from an external service.

You need to recommend a Microsoft Azure component for each requirement.

Which Azure components should you recommend? To answer, drag the appropriate Azure components to the correct requirements. Each Azure component may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Azure Event Hub

Azure Service Bus

Azure Data Factory

Azure Synapse Link

Answer Area

Requirement

Consume data in a data warehouse.

Consume data from an external source.

Azure component

Answer:

Azure Event Hub

Azure Service Bus

Azure Data Factory

Azure Synapse Link

Answer Area

Requirement

Consume data in a data warehouse.

Consume data from an external source.

Azure component

Azure Data Factory

Azure Service Bus

Explanation:

Azure Event Hub

Azure Service Bus

Azure Data Factory

Azure Synapse Link

Answer Area

Requirement

Consume data in a data warehouse.

Consume data from an external source.

Azure component

Azure Data Factory

Azure Service Bus

NEW QUESTION: 73

A company uses Power Pages for article submissions. The article properties are stored in a table in Microsoft Dataverse and the content of the article is stored in a related Microsoft SharePoint library. The company invites different experts outside its organization to review an article before publishing it. The reviewers are granted access to the articles in Microsoft Dataverse. The company has the following requirements:

- * Provide a app to canvas the reviewers that exposes both the article properties and content in read-only mode.
- * Once the review is completed, the reviewer saves the review data, and the article and the review no longer appear in the app.

You need to recommend the components to be used for each requirement.

Which options should you use?

NOTE: Each correct selection is worth one point.

Answer Area

Requirement	Option
Security configuration for reviewers	Create a dedicated access team and add the reviewers to the team. Create a dedicated access team and add the reviewers to the team. Create a dedicated access team template and add it to the article record. Create a dedicated owner team in the Microsoft Dataverse environment and add the reviewers to the team. Create a dedicated Microsoft Teams channel with a security role for the article and add the reviewers as members.
Access to the app	Embed app in Power Pages portal. Embed app in Power Pages portal. Share app through the Power Apps maker portal. Register app in Azure AD and email the registration link. Publish the app in Power Apps Studio and email the link to the app.

Answer:

Answer Area

Requirement	Option
Security configuration for reviewers	Create a dedicated access team and add the reviewers to the team. Create a dedicated access team and add the reviewers to the team. Create a dedicated access team template and add it to the article record. Create a dedicated owner team in the Microsoft Dataverse environment and add the reviewers to the team. Create a dedicated Microsoft Teams channel with a security role for the article and add the reviewers as members.
Access to the app	Embed app in Power Pages portal. Embed app in Power Pages portal. Share app through the Power Apps maker portal. Register app in Azure AD and email the registration link. Publish the app in Power Apps Studio and email the link to the app.

Explanation:

Answer Area

Requirement	Option
Security configuration for reviewers	Create a dedicated access team and add the reviewers to the team.
Access to the app	Embed app in Power Pages portal.

NEW QUESTION: 74

An organization plans to implement a solution to deliver the complete sales process for its sales teams. The organization does NOT have any physical barcode scanners.

To meet the organization business requirements, the proposed solution must include the following capabilities:

Create and qualify leads to contacts

Generate quotes and convert quotes to orders

Scan product barcodes as part of the order generation process

You need to recommend a solution to help the organization achieve its business requirements.

What should you recommend?

- A. Dynamics 365 mobile app and a Power Apps canvas app
- B. Dynamics 365 for Phones only
- C. Dynamics 365 Customer Service and Dynamics 365 Sales
- D. Unified Service Desk

Answer: (SHOW ANSWER)

There is barcode scanner control in Power Apps. The control opens a native scanner on an Android or iOS device. The scanner automatically detects a barcode, a QR code, or a data-matrix code when in view.

Use the Dynamics 365 for phones or Dynamics 365 for tablets app to run customer engagement apps (such as Dynamics 365 Sales, Dynamics 365 Customer Service, and Dynamics 365 Marketing), built on Microsoft Dataverse on your mobile device.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/field-service/mobile-power-app-system-barcode-scanning>

<https://docs.microsoft.com/en-us/dynamics365/mobile-app/overview>

NEW QUESTION: 75

A company plans to create a Power Platform solution that integrates with Dynamics 365 Sales.

The solution must meet the following requirements:

- * Connect directly with a Microsoft Azure SQL database as an external data source at run time where specific data is available in the Dynamics 365 Sales solution without the need for data replication.
- * An external system needs to send data to the company's Dynamics 365 Sales solution.

You need to recommend the most suitable solution to integrate Dynamics 365 Sales with both systems.

What should you recommend? To answer, select the appropriate option in the answer area.

NOTE: Each correct selection is worth one point.

Integration requirement

Have read-only visibility of data from an external Azure SQL database.

External system sends data to Dynamics 365 Sales.

Use virtual tables.

Use a custom plug-in.

Use Dynamics 365 Web API.

Use a web resource to display data.

Answer:

Integration requirement

Solutions

Have read-only visibility of data from an external Azure SQL database.

- Use virtual tables.
- Use a custom plug-in.
- Use Dynamics 365 Web API.
- Use a web resource to display data.

External system sends data to Dynamics 365 Sales.

- Use a custom plug-in.
- Use Dynamics 365 Web API.
- Use a web resource to display data.

Explanation:

Integration requirement

Solutions

Have read-only visibility of data from an external Azure SQL database.

- Use virtual tables.
- Use a custom plug-in.
- Use Dynamics 365 Web API.
- Use a web resource to display data.

External system sends data to Dynamics 365 Sales.

- Use a custom plug-in.
- Use Dynamics 365 Web API.
- Use a web resource to display data.

Box 1: Use Virtual tables

A virtual entity is a custom entity in Dynamics 365 Customer Engagement (on-premises) that has fields containing data from an external data source. Virtual entities appear in your app to users as regular entity records, but contain data that is sourced from an external database, such as an Azure SQL Database. Records based on virtual entities are available in all clients including custom clients developed using the Dynamics

365 Customer Engagement Web Services.

Box 2: Use Dynamics 365 Web API.

Dynamics 365 Web Services API: Many times, straight database-to-database integrations aren't a possibility.

In these cases, the development of a solution may depend on utilization of the Dynamics 365 Customer Engagement web services API (Application Programming Interface).

Reference:

NEW QUESTION: 76

You need to recommend a collaboration tool for each group.
Which tool should you use? To answer, select the appropriate tool in the answer area.
NOTE: Each correct selection is worth one point.

Group	Microsoft Tool
Maintenance supervisors	▼ Microsoft Teams Notes Power Apps portal Posts
Aircraft maintenance vendors	▼ Dynamics 365 Workspace Notes Power Apps portal Posts

Answer:

Group

Maintenance supervisors

	▼
Microsoft Teams	
Notes	
Power Apps portal	
Posts	

Aircraft maintenance vendors

	▼
Dynamics 365 Workspace	
Notes	
Power Apps portal	
Posts	

Explanation:

Box 1: Microsoft Teams

Maintenance supervisors must not have access to Dynamics 365 Customer Service. The supervisors must be able to communicate with the contracts team about contracts.

Box 2: Dynamics 365 Workspace

Aircraft maintenance vendors must have only view and upload privileges to their invoices and receipts.

The Expense management mobile workspace lets users capture and upload a receipt, so that they can attach it to an expense report later.

Reference:

<https://docs.microsoft.com/en-us/dynamics365/project-operations/prod-exp/expense-management-mobile-workspace>

Topic 2, First Up Consulting

Case study

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Background

First Up Consulting recruits information technology (IT) workers for temporary or permanent positions at client companies. The company operates offices in multiple countries/regions.

First Up has both full-time and part-time employees. The company has a team of worker support agents that respond to inquiries from current and prospective workers. Some of the worker support agents are multilingual.

The company does not have a standardized tool used for reporting purposes. The organization engages you to implement a new Power Platform solution. Workers are managed by a dedicated team that includes one primary recruiter and a contract assistant. Many client companies live in areas that do not allow for mobile data connections.

Current environment

Existing systems and processes

- * First Up uses an on-premises system to manage current and historical patient data including medications and medical visits.
- * The company plans to reference historical data in the existing system. The records held in these systems will not be migrated to the new solution except for medication information.
- * Employee authentication with the existing system is provided by an on-premises Active Directory instance that is linked to Azure Active Directory.
- * An appointment record is created for each visit with a worker. The record includes worker contact information, preferred language, the date and time of the appointment, and other relevant data. This information is reviewed by the worker's primary recruiter.
- * First Up has no current capabilities for forecasting future worker needs based on the data held.

Client company visits

Before First Up signs a contract to place workers at a client company, a member of the audit team visits the company and interviews company management. Audit members use different types of devices including Android and iOS devices. First Up has no plans to require the use of a single type of device. Audit team members currently record information about workers on paper forms. Team members enter information from paper forms into the system when they return to the office.

First Up audits client companies at least once each year but may schedule additional visits based on feedback from workers that they place at a client company.

Requirements

General

- * There is no standardized communication tool across the company, and this causes communication issues between different teams.
- * First up employees must be able to contact each other by using a secure system to ask and answer questions about medical cases.
- * Workers must be able to communicate in near real-time with worker support agents.

Client company visits

- * Audit team records must be locked after they have been reviewed by a First Up manager. No further edits to the record can be carried out. This must be implemented using standard available system functionality.
- * Audit teams must be able to enter records of their visits to the companies where they have or may place workers. Audit teams must be able to update any necessary records with the latest information.
- * The solution must support tracking of security clearance information for a worker including the date, status, and certifying agency.
- * When a worker makes an appointment, the appointments must appear in the timeline for the worker's contact record.

Job history information

- * The solution must provide a worker appointment booking system that can access worker historical job placement data.
- * The solution must allow employees to associate a primary recruiter with each worker. The solution must also allow multiple secondary recruiters to be associated with each worker.
- * Every worker assessment performed must be validated and countersigned by the primary recruiter for a worker.
- * Job posting data from previous work engagements must be accessible by the Power Platform solution to ensure that new job postings are accurate.
- * First Up staff members must be able to view and update worker records. They must be able to see current and historical job placement data on the same form in the new solution.

Worker access

- * The solution must support workers that speak different languages. The solution must provide automatic translation capabilities.

- * The solution must support near real-time communications between workers and recruiters.
- * Workers must be able to view their records online. Workers must be able to enter any additional information that is required by or may be helpful to recruiters.
- * The solution must provide workers a way to search for general information about available positions.
- * Workers must be able to request copies of their records by using a chatbot. Workers must be able to provide information to a recruiter as needed.

Data platform

- * Audit teams must have the ability to view worker information on their mobile devices.
- * Audit teams must be able to record data during visits to locations where workers are placed.
- * The solution must support the ability for a corporate governance auditing team to periodically audit the organization's records, policies, and procedures.

Reporting and analytics

- * The reporting and analytics team must be able to create reports that include data from all facilities and all workers.
- * Management reports must present an overview of the entire organization. Other reports may be limited to specific offices.
- * You must create dashboards that show the status across all groups of workers. The dashboards must be embedded into the Power Platform apps. Updates to data must be displayed in near real time.

Security

- * Authentication for all user types must be managed by a single platform. IT teams must use PowerShell to apply security permissions for users.
- * Worker records must only be viewed by the recruiting office that the worker visits.
- * Worker still records must be archived after ten years and are then removed from the main system.

Worker information must not be deleted from the system while skill and job placement history records for the worker exist in the system.

- * User security roles must be customized to ensure that users are able to interact only with the specific data in which they need access.
- * Workers must be able to sign into a portal by using their own email address. Workers must be required to use a secure method of authentication to be able to view their data.
- * Alerts regarding the number of recruited and placed at client companies must be updated as background processes.

Issues

The organization reports the following issues:

- * Recruiters report that they cannot see historical job placement data for workers.
- * API usage reports show that the number of API calls made exceeds limits. This causes delays saving data.
- * Users cannot view Power BI reports within the Power Platform apps.
- * Some security clearance information for workers not visible from within the Power Platform solution.
- * Audit teams report that they cannot view or edit worker data when the device on which they access the solution does not have network connectivity.
- * The testing team reports that one of the canvas apps is not working as expected. An error message displays as specific pages load.

NEW QUESTION: 77

A company is creating a Microsoft Power Platform app to enable employees to log daily time entries.

Employee user accounts are in multiple Azure AD tenants and are not located in the tenant that is running the app.

Employees must be added as Azure AD guest accounts within the tenant that will be running the app.

Employees must access the model-driven app by being a member of a security team. The security team has been assigned the Employee Security role. Employees must create personal views of records to view within the system.

You need to implement a security solution.

Which privilege should you use?

- A. Azure AD security group
- B. Team
- C. Direct basic level
- D. Shared app access

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 78

You need to design the quality inspection order data model.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Requirement	Action
Obtain the serial number and other machine attributes for use in the inspection order.	Microsoft ▼ Use a virtual table. Import to a custom table. Create a lookup to Dynamics 365 Field Service.
Configure the relationship between inspection orders and inspection ratings.	▼ Create a one-to-many relationship and set the behavior to Parental. Create a many-to-many relationship and set the behavior to Parental. Create a one-to-many relationship and set the behavior to Cascade None. Create a many-to-many relationship and set the behavior to Cascade None.

Answer:

Requirement	Action
Obtain the serial number and other machine attributes for use in the inspection order.	▼ Use a virtual table. Import to a custom table. Create a lookup to Dynamics 365 Field Service.
Configure the relationship between inspection orders and inspection ratings.	▼ Create a one-to-many relationship and set the behavior to Parental. Create a many-to-many relationship and set the behavior to Parental. Create a one-to-many relationship and set the behavior to Cascade None. Create a many-to-many relationship and set the behavior to Cascade None.

Explanation:

Requirement

Action

Obtain the serial number and other machine attributes for use in the inspection order.

	▼
Use a virtual table.	
Import to a custom table.	
Create a lookup to Dynamics 365 Field Service.	

Configure the relationship between inspection orders and inspection ratings.

	▼
Create a one-to-many relationship and set the behavior to Parental.	
Create a many-to-many relationship and set the behavior to Parental.	
Create a one-to-many relationship and set the behavior to Cascade None.	
Create a many-to-many relationship and set the behavior to Cascade None.	

Box 1: Create a lookup to Dynamics 365 Field Service

Scenario: Machines are assigned serial numbers and placed in stock until they are shipped to customers.

Entity lookup: Allows technicians to choose a Dynamics 365 record. In the inspection designer interface, admins must select an entity and a field to display. For a chosen entity, the Name field and mandatory fields are the entity attributes that can be displayed in the lookup.

Box 2: Create a one-to-many relationship and set the behavior to Parental Scenario: Inspection orders must:

* Allow entry of quality ratings of passed or failed for each quality metric identified for the machine being rated.

* Be automatically marked as failed if one inspection step rating is marked as failed.

Each inspection order can have one or many inspection steps, and each inspection step has a rating.

Note: Each pair of tables that are eligible to have a 1:N relationship can have multiple 1:N relationships between them. Yet usually only one of those relationships can be considered a parental table relationship.

<https://docs.microsoft.com/en-us/dynamics365/field-service/inspections>

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-entity-relationships>

NEW QUESTION: 79

A company uses Microsoft Power Platform solutions.

The company plans to set up application lifecycle management (ALM) capabilities to store the solutions in source control, which will be used to automate the release process.

You need to set up the initial ALM infrastructure to store the solutions in source control.

Which four actions should you perform in sequence?

To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Run the pipeline.
- Create an Export pipeline.
- Create an Azure DevOps Project.
- Install the Microsoft Power Platform Build Tools.
- Create a Release pipeline.
- Add a task for Microsoft Power Platform Import Solution.

Steps

- 1
- 2
- 3
- 4

NEW QUESTION: 80

A company uses a third-party cloud-based app to make real-time business decisions. The app has a RESTful API.

You must design a Microsoft Power Platform solution that interacts with the third-party app. Changes made in the Microsoft Power Platform solution must be reflected in the cloud app.

You need to recommend technologies to integrate the Microsoft Power Platform solution with the cloud app.

Which two technologies should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Scheduled Power Automate cloud flow with a custom connector to the cloud app

B. Power Virtual Agents

C. Custom plug-on registered with Microsoft Dataverse

D. Model-driven app

Answer: C,D (LEAVE A REPLY)

A: To enable Logic Apps, Power Automate, or Power Apps to communicate with the REST or SOAP API, use a custom connector, which is a wrapper around a REST API (Logic Apps also supports SOAP APIs).

C: Custom APIs are a powerful way to connect to any existing API, hosted anywhere, from PowerApps. You do not need a PowerApps Enterprise subscription to register or use a Custom API. Custom APIs are RESTful endpoints that you can connect to and use from PowerApps. All you'll need is a Swagger definition file for your endpoint.

Reference:

<https://docs.microsoft.com/en-us/power-platform/guidance/architecture/real-world-examples/custom-connector-canvas>

<https://powerapps.microsoft.com/hr-hr/blog/register-and-use-custom-apis-in-powerapps/>

NEW QUESTION: 81

You are overseeing the data migration for a Microsoft Power Platform solution.

The migration team is performing a test migration with a subset of data. The migration team reports the following findings:

- * Users who own account rows are receiving system generated emails.
- * Data that is not part of the migration is being added to the Contact and Appointment tables.
- * The size of the log listed on the Power Platform admin center Capacity page has increased significantly.

You need to recommend strategies to resolve the reported issues.

What should you recommend? To answer, drag the appropriate resolution to the correct migration problem.

Each resolution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Resolution strategies

Migration issue

Resolution strategy

Disable auditing.

Disable duplicate detection.

Disable all custom JavaScript functions.

Disable all workflows, plug-ins, and Power Platform admin center

Users who own account rows are receiving system generated emails.

Data that is not part of the migration is being added to the Contact and Appointment tables.

The size of the log listed on the Power Platform admin center Capacity page has increased significantly.

Answer:

Explanation:

Box 1: Disable duplicate detection

Duplicate detection has rules for sending emails.

Box 2: Disable all workflows, plug-ins, and Power Platform admin center Box 3: Disable auditing Auditing affects the size of the log file.

ference:

<https://docs.microsoft.com/en-us/power-platform/admin/set-up-duplicate-detection-rules-keep-data-clean>

NEW QUESTION: 82

A company is struggling to gather insights from won and lost opportunities.

Users must be able to access the company's solution from mobile and desktop devices. The solution must meet the following requirements:

- * Track opportunities and reasons for the win or loss of opportunities in the context of other related data.
- * Display data to users as charts and tables and provide drill-through capabilities.

You need to recommend a Microsoft Power Platform tool to help the client visualize the data. Which two technologies should you recommend? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

A. Power Automate

B. Power Virtual Agents

C. Power BI

D. Power Apps

Answer: C,D ([LEAVE A REPLY](#))

NEW QUESTION: 83

You are designing tables and columns for a Microsoft Power Platform solution. The solution will contain an interactive experience dashboard.

You need to ensure that the columns you create can be used as global filters for the dashboard. Which two data types can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

A. Yes/No

B. Choice

C. Text

D. Multiline Text

E. Lookup

Answer: A,B ([LEAVE A REPLY](#))

<https://docs.microsoft.com/en-us/powerapps/maker/data-platform/create-edit-field-solution-explorer#column-data-types> With interactive dashboards, a chart uses the color assigned to the categories that make up the different values, even if the chart is configured to use random colors, when the chart is configured to be grouped by any of the following column types:

Choice

Yes/No

Status Reason

Reference:

<https://docs.microsoft.com/en-us/powerapps/maker/model-driven-apps/configure-interactive-experience-dashboards>

NEW QUESTION: 84

You are designing a Microsoft Power Platform solution for a company that has multiple Microsoft Dataverse environments.

You need to prevent specific users from accessing specific environments.

What should you do?

A. Remove all security roles from the users of the specific environments.

B. Remove the user from the business unit.

C. Remove the user from all security groups.

D. Remove the user from all teams.

Answer: A ([LEAVE A REPLY](#))

Microsoft Dataverse uses a role-based security model to help secure access to the database. Security roles can be used to configure environment-wide access to all resources in the environment.

Reference:

<https://docs.microsoft.com/en-us/power-platform/admin/database-security>

NEW QUESTION: 85

A company plans to import 2.5 million data rows into Microsoft Dataverse during a go-live process. The import job will run as a single import job.

You run a test on the import and observe that some of the rows did not import.

You need to identify which rows did not import.

Which tool should you use?

- A. Azure Service Bus
- B. Azure Event Hub
- C. Microsoft Power Platform dataflows
- D. Import Data Wizard

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 86

You need to recommend the appropriate components to meet the inspection requirements.
What should you recommend? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Requirement	Solution
Prevent editing of finalized inspection orders.	Business rule Security role User permission
Prepare documentation for failed inspection steps.	Data flow Business rule Form property

Answer:

Requirement

Solution

Prevent editing of finalized inspection orders.

	▼
Business rule	
Security role	
User permission	

Prepare documentation for failed inspection steps.

	▼
Data flow	
Business rule	
Form property	

Explanation:

Requirement

Solution

Prevent editing of finalized inspection orders.

	▼
Business rule	
Security role	
User permission	

Prepare documentation for failed inspection steps.

	▼
Data flow	
Business rule	
Form property	

Box 1: Security role

Microsoft Dataverse uses a role-based security model to help secure access to the database.

Scenario:

- * You must prevent users from changing inspection order data once an inspection is marked as final.
- * Supervisors must be able to modify standard checklists. Other employees must be prevented from modifying checklists.

Box 2: Data flow

Dataflows are a self-service, cloud-based, data preparation technology. Dataflows enable customers to ingest, transform, and load data into Microsoft Dataverse environments, Power BI workspaces, or your organization's Azure Data Lake Storage account.

Scenario: Provide a visual representation of the testing measurement limits for each step. Include an indication of how the measured value compares to measurement limits and whether the measurement is within tolerance. Users must be able to configure the visualizations to display the minimum value and maximum value, and whether the reading is within the tolerance of a single targeted value. It must also be able to be used for maintenance inspections once the machine has been installed.

NEW QUESTION: 87

A company uses manual processes to track interactions with customers. The company wants to use Power Platform to improve productivity.

The company has the following requirements:

Provide customers with an online portal where they can submit and review cases.

Ensure that customers can chat online with a customer service representative at any time.

Route chats to customer service representatives based on skill and availability.

You need to recommend a solution to the company.

Which three components should you recommend? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

A. Dynamics 365 Virtual Agents chatbots

B. Customer self-service portal

C. Dynamics 365 Field Service

D. Business process flows

E. Omnichannel for Customer Service

Answer: B,D,E (LEAVE A REPLY)

B: Customer self-service portal: A customer self-service portal enables customers to access self-service knowledge, support resources, view the progress of their cases, and provide feedback.

Note: Based on the selected environment in Power Apps, you can create a Dataverse starter portal or a portal in an environment containing customer engagement apps (Dynamics 365 Sales, Dynamics 365 Customer Service, Dynamics 365 Field Service, Dynamics 365 Marketing, and Dynamics 365 Project Service Automation).

E: Omnichannel for Customer Service offers a suite of capabilities that extend the power of Dynamics 365 Customer Service Enterprise to enable organizations to instantly connect and engage with their customers across digital messaging channels.
