NEW QUESTION: 1

Northern Trail Outfitters developed an integration between its two Salesforce orgs using MuleSoft Composer.

Which two actions should be taken before testing the Composer flow? (Choose two.)

A. Ensure the flow trigger is connected to a sandbox instance of Salesforce.

B. Ensure action steps are connected to a sandbox instance of Salesforce.

C. Ensure the credentials to the target production org are still valid.

D. Ensure MuleSoft Composer is installed on both the source and target orgs.

Answer: A,B (LEAVE A REPLY)

* Flow Trigger Connection: Before testing any Composer flow, it is crucial to connect the flow trigger to a sandbox instance of Salesforce. This ensures that testing does not impact the production environment. The sandbox provides a safe space to simulate real-world conditions without the risk of data corruption or unintended actions in the live system.

* Action Steps Connection: Similar to the flow trigger, action steps within the Composer flow should also be connected to a sandbox instance. This allows comprehensive testing of the flow's functionality, ensuring that each step performs as expected without affecting the production data.

* Ensuring Validity of Credentials: While it is important to ensure that credentials to the production org are valid when moving to production, for testing purposes, the emphasis is on sandbox connections. The credentials should be verified to avoid disruptions during testing.

* Installation of MuleSoft Composer: MuleSoft Composer does not need to be installed on both the source and target orgs as it operates independently and connects to these orgs through provided credentials.

NEW QUESTION: 2

A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.
Before designing a new integration, what should they use to determine if the integration exists and can be reused?
A. Design Center
B. Anypoint Studio
C. Anypoint Exchange
D. MuleSoft Composer
Answer: C (LEAVE A REPLY)
To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:
Anypoint Exchange:
Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.
By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.
Anypoint Exchange Documentation

NEW QUESTION: 3
Northern Trail Outfitters is building a hyperautomation solution using Salesforce and MuleSoft. They need to use Salesforce Flow to automate a multi-departmental process in an external system and capture the outcome in Salesforce.
How should the Salesforce Flow solution be structured to meet this requirement?
A. An autolaunched flow invoked by REST API to update Salesforce after the process is completed
B. A Flow Orchestration to automate the multi-departmental process and update Salesforce records
C. Parent and subflows invoked by REST API to capture user inputs and update Salesforce records
D. An evaluation flow which evaluates when the process is completed and updates Salesforce records
Answer: B (LEAVE A REPLY)
Salesforce Flow Orchestration is designed to manage complex, multi-step business processes that span multiple departments and systems. Here's how it can be structured to meet the requirement:
Automate Multi-Departmental Process:
Use Flow Orchestration to define and manage the steps involved in the multi-departmental process. It allows you to break down the process into stages and define the sequence of actions and approvals required.

Capture Outcome in Salesforce:
After completing the external process, Flow Orchestration can be configured to update Salesforce records with the outcome. This ensures that the results of the automated process are reflected within Salesforce.
Orchestration Capabilities:
Salesforce Flow Orchestration provides features such as task assignments, decision elements, and complex branching logic, which are ideal for managing multi-departmental workflows.
Salesforce Flow Orchestration Documentation

NEW QUESTION: 4
For a MuleSoft Composer flow, errors can be noted in its Flow Details page.
What other way can MuleSoft Composer send notifications when errors occur?
A. It posts to a configured Chatter profile.
B. It generates a notification in the flow.
C. It sends a message to a configured Slack channel.
D. It sends a notification to the configured email address.
Answer: D (LEAVE A REPLY)
MuleSoft Composer provides a way to handle errors and notify users when something goes wrong in a flow. Aside from viewing errors on the Flow Details page, MuleSoft Composer can also send notifications to alert users about the errors.
Flow Error Handling: When an error occurs in a MuleSoft Composer flow, the error is logged and visible on the Flow Details page.
Email Notifications: MuleSoft Composer can be configured to send notifications to a specified email address. This allows users to be promptly informed of any issues without having to constantly monitor the Flow Details page.
Configuration: This can be set up in the MuleSoft Composer settings, where an email address can be configured to receive these notifications.

NEW QUESTION: 5
AnyAirlines implements a credit card program that requires customer applications to go through a review process before approval. They want to develop a series of hyperautomation solutions that will integrate to process the applications and enter the customer's information into a legacy system once approved.
They want to complete the following components:
An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object A Salesforce flow that marks the credit card application as approved in Salesforce An RPA process that interacts with multiple applications and websites A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process Which component will likely require the most effort to complete?

A. A simple MuleSoft Composer flow that triggers if a credit card application is approved and then invokes an RPA process
B. A Salesforce flow that marks the credit card application as approved in Salesforce
C. An RPA process that interacts with multiple applications and websites
D. An Einstein bot that will initiate the credit card application and create a record of an existing Salesforce Custom Object
Answer: C (LEAVE A REPLY)
Developing an RPA process that interacts with multiple applications and websites typically requires the most effort due to several factors:
Complexity of Interaction:
RPA processes involve simulating human actions to interact with different user interfaces. This includes navigating web pages, filling out forms, and clicking buttons, which can be complex and time-consuming to script and test.
Integration Challenges:
The RPA process must handle different applications and websites, each with unique behaviors and potential for errors. Ensuring reliable and consistent interaction across these systems requires thorough testing and potentially custom handling for each system.
Maintenance and Updates:
RPA processes need to be maintained and updated as the applications or websites they interact with change. This ongoing effort can be significant compared to other components.
MuleSoft RPA Documentation

NEW QUESTION: 6
AnyAirlines needs to automatically sync Salesforce accounts with NetSuite customers using a MuleSoft Composer flow. The Address field in the Salesforce Account object is a compound field consisting of the simple fields: Street, City, State, Zip, and Country.
However, the Address field in the NetSuite Customer entity is a list consisting of the simple fields: Street, City, State, Zip, and Country.
Which task must be performed to map fields of the Salesforce Address compound field to the corresponding fields of the NetSuite Address list in the flow?
A. Combine the Salesforce address-related fields into a list using a custom formula field in Salesforce.
B. Combine the Salesforce address-related fields into a list using a custom expression in Composer.
C. Combine the Salesforce address-related fields into a list using the Get records action in Composer.
D. Break up the NetSuite Address list into fields that match Salesforce address-related fields using a custom formula field in NetSuite.
Answer: B (LEAVE A REPLY)
To map fields of the Salesforce Address compound field to the corresponding fields of the NetSuite Address list in MuleSoft Composer, you need to perform the following task:

Custom Expression in Composer:
Use a custom expression in MuleSoft Composer to combine the individual address-related fields from Salesforce (Street, City, State, Zip, Country) into a format that matches the NetSuite Address list.
This custom expression will concatenate the individual simple fields from Salesforce into a structured format that can be mapped directly to the NetSuite Address list.
Mapping the Fields:
Once the custom expression is created, map the resulting list to the corresponding fields in the NetSuite Customer entity within the Composer flow.
This ensures that each simple field in the Salesforce compound Address field is correctly mapped to the respective field in the NetSuite Address list.
MuleSoft Composer Documentation

NEW QUESTION: 7
AnyAirlines is attempting to automate a process that triggers when a case is created in Salesforce but requires data to be extracted from a website without an API. It plans to automate the process using MuleSoft Composer and MuleSoft RPA.
During the design phase, it uses RPA Recorder to gather the steps required to interact with the website.
What will automatically be gathered by RPA Recorder when recording a manual activity?
A. Variable information used by the user during the process
B. Conditional decisions made by the user during the process
C. Comments on the purpose of the different steps carried out by the user
D. Documentation on the elements used by the user during the process
Answer: D ([LEAVE A REPLY]())
When using MuleSoft RPA Recorder to gather steps required for interacting with a website, it automatically collects documentation on the elements used by the user during the process.
MuleSoft RPA Recorder:
Automatic Element Documentation: The RPA Recorder captures all the elements (e.g., buttons, fields, and other UI components) that the user interacts with during the manual process recording.
Metadata Collection: It collects metadata such as element IDs, types, and positions, which are essential for accurately replicating the manual actions during automation.
Why Not Other Options:
Variable Information: While variable information is important, it is not the primary focus of the RPA Recorder. Variables can be defined post-recording.
Conditional Decisions: Conditional logic is typically added during the design phase of the RPA script, not during the initial recording.
Comments: User comments on the purpose of steps are not automatically recorded; this information needs to be added manually.

For more detailed information on how MuleSoft RPA Recorder works, refer to MuleSoft's official RPA documentation

NEW QUESTION: 8

The MuleSoft team at Northern Trail Outfitters wants to create a project skeleton that developers can use as a starting point when creating API implementations with Anypoint Studio. This will help drive consistent use of best practices within the team.
Which type of Anypoint Exchange artifact should be added to Exchange to publish the project skeleton?

A. RAML trail definitions to be reused across API implementations
B. A custom asset with the default API implementation
C. A MuleSoft application template with key components
D. An example of an API implementation following best practices

Answer: (SHOW ANSWER)

To create a project skeleton that developers can use as a starting point for API implementations with Anypoint Studio, the best approach is to use a MuleSoft application template:
MuleSoft Application Template:
A MuleSoft application template includes key components and configurations that follow best practices. It provides a consistent starting point for new projects, ensuring that all developers adhere to the same standards.
Benefits:
Using a template helps enforce best practices, reduces the setup time for new projects, and ensures consistency across different implementations.
Publishing to Anypoint Exchange:
Once the template is created, it can be published to Anypoint Exchange where it is accessible to the entire development team. Developers can then use this template to kickstart their API projects, ensuring a uniform approach across the organization.
Anypoint Exchange Templates Documentation

NEW QUESTION: 9

AnyAirlines uses an Einstein bot for their customer support. They want it to display a message when a user provides an incorrect answer to a particular question.
Which dialog option should be selected'?

A. Message
B. Action
C. Question
D. Rules

Answer: A (LEAVE A REPLY)

* Message Dialog Option: When configuring an Einstein bot to respond to incorrect answers, the 'Message' dialog option should be selected. This allows the bot to display a

predefined message to the user, guiding them appropriately or informing them of the incorrect input.
* Understanding Dialog Options:
Action: Used for initiating backend processes or external actions.
Question : Used for asking the user for information or inputs.
Rules: Used for defining conditional logic to control the flow of the conversation.
Message: Specifically used to provide information or feedback to the user, which is ideal for handling incorrect answers.

NEW QUESTION: 10
AnyAirlines has a MuleSoft Composer flow between NetSuite and Salesforce. One of the data elements coming from NetSuite is a string that needs to be put into a Boolean field in a Salesforce object.
Which Composer function should be used to change the datatype of the value?
A. today()
B. fromBooleanToString()
C. fromStringToBoolean()
D. substitute()
Answer: C (LEAVE A REPLY)
To convert a string from NetSuite into a Boolean field in a Salesforce object within MuleSoft Composer, you should use the fromStringToBoolean() function:
Function Purpose:
The fromStringToBoolean() function is specifically designed to convert string values to Boolean values. It interprets common Boolean strings like "true", "false", "yes", "no" and converts them into their corresponding Boolean values.
Usage:
Within MuleSoft Composer, use this function in a transformation step to ensure the data coming from NetSuite (as a string) is correctly transformed into a Boolean value before it is mapped to the Salesforce object.
Example:
If the string value from NetSuite is "true", fromStringToBoolean("true") will convert this to true in the Boolean field in Salesforce.
MuleSoft Composer Functions Documentation

NEW QUESTION: 11
AnyAirlines releases a new REST API that exposes access to an RPA process. The RPA process can only handle a limited number of interactions per second before the API begins returning errors.
Which policy should AnyAirlines apply to prevent the API from being overloaded?
A. JSON threat protection
B. Rate Limiting - SLA

C. Spike Control
D. Client ID Enforcement
Answer: (SHOW ANSWER)
To prevent an API from being overloaded, the Spike Control policy is suitable. It helps manage sudden bursts of traffic by limiting the rate at which requests are processed.
Here's how it works:
Preventing Overloads:
Spike Control smooths out bursts of incoming requests by enforcing a rate limit over a short period, protecting the backend systems from being overwhelmed by excessive traffic.
Configuration:
Apply the Spike Control policy to the API to define the maximum number of requests allowed within a specific timeframe.
This ensures that the API can handle a limited number of interactions per second, preventing errors due to overload.
Implementation:
In Anypoint Platform, configure the Spike Control policy to the desired thresholds, ensuring the RPA process can handle the load effectively without errors.
Anypoint Platform Spike Control Documentation

NEW QUESTION: 12
An AnyAirlines employee determines that an RPA process is a strong candidate for automation. When approving the process, the employee needs to specify a group of potential users to manage the RPA process throughout its lifecycle.
According to best practices, which group should the employee choose?
A. Scrum team
B. Center for Enablement
C. Center of Excellence
D. Multiple project managers
Answer: (SHOW ANSWER)
When approving an RPA process and specifying a group of potential users to manage it throughout its lifecycle, the best practice is to choose the Center of Excellence (CoE):
Center of Excellence (CoE):
The CoE is a team of experts who are responsible for overseeing the implementation, governance, and management of RPA processes within the organization.
They ensure that best practices are followed, provide guidance and support to project teams, and manage the overall RPA strategy and roadmap.
Lifecycle Management:
The CoE is well-equipped to manage the RPA process from initial development through deployment and ongoing maintenance. They have the expertise to handle any issues that arise and ensure the process remains efficient and effective.
Best Practices:

By involving the CoE, the organization ensures that the RPA process adheres to established best practices, maintains high quality, and delivers the expected benefits.
MuleSoft RPA Documentation
RPA Center of Excellence Best Practices

NEW QUESTION: 13
AnyAirlines is creating a hyperautomation solution that will run any time a record is created in NetSuite and will update a record in Salesforce. Many records present in Salesforce need to be related to the updated record. AnyAirlines wants to automatically update each of these dependent records.
When combined, which two hyperautomation solutions should be used to automate this process without involving IT? (Choose two.)
A. Anypoint Platform
B. Salesforce Flow
C. MuleSoft RPA
D. MuleSoft Composer
Answer: B,D (LEAVE A REPLY)
To automate the process of updating related records in Salesforce when a record is created in NetSuite, combining Salesforce Flow and MuleSoft Composer is ideal:
MuleSoft Composer:
Use MuleSoft Composer to create a flow that triggers when a new record is created in NetSuite.
Configure the flow to update the corresponding record in Salesforce. This ensures that changes in NetSuite are automatically reflected in Salesforce.
Salesforce Flow:
Use Salesforce Flow to create a record-triggered flow that updates all dependent records whenever the primary Salesforce record is updated.
This flow can be set to trigger on updates to the primary record and include logic to identify and update all related records.
Combining MuleSoft Composer for integration and Salesforce Flow for in-Salesforce automation ensures that the entire process is streamlined and automated without requiring IT involvement.
MuleSoft Composer Documentation
Salesforce Flow Documentation

NEW QUESTION: 14
An RPA developer is building the implementation of an RPA process based on the BPMN created by a colleague. In the BPMN, they see the symbol below:
What does the symbol represent?
A. An activity that is performed if an error occurs during processing

B. A point in the process where different activities are performed under different circumstances
C. One possible endpoint for the process
D. A cleanup activity that is performed at the end of the process to ensure all running applications are closed
Answer: (SHOW ANSWER)
* Symbol Meaning: The symbol shown is a diamond with an "X" inside, which represents an exclusive gateway in BPMN (Business Process Model and Notation). This gateway is used to control the flow of the process based on certain conditions or circumstances.
* Exclusive Gateway: An exclusive gateway routes the process flow into one of several paths based on conditions defined within the process model. Only one path is taken out of the gateway.
* Usage in Process: When an exclusive gateway is encountered, the process evaluates the conditions on each outgoing sequence flow and chooses the path that meets the conditions. This ensures different activities are performed based on different circumstances.

NEW QUESTION: 15
Northern Trail Outfitters must create a near real-time inventory API that can be used within its retail POS systems, across its mobile and online stores, and by its strategic B2B e-commerce partners. The API must provide accurate and up-to-date product inventory levels. The data currently resides in both SAP and NetSuite.
According to best practices, which hyperautomation tool should be used to build this solution?
A. Salesforce Flow
B. MuleSoft Composer
C. MuleSoft RPA
D. Anypoint Platform
Answer: D (LEAVE A REPLY)
To create a near real-time inventory API that integrates data from SAP and NetSuite and can be used across various platforms and partners, the Anypoint Platform is the most suitable tool:
Anypoint Platform:
Anypoint Platform provides comprehensive integration capabilities, including real-time data processing, API management, and connectivity to various systems like SAP and NetSuite.
It supports building robust, scalable APIs that can handle near real-time data synchronization, ensuring accurate and up-to-date inventory levels across multiple channels.
Best Practices:
Using Anypoint Platform, you can design and manage APIs with fine-grained control over security, performance, and monitoring, adhering to best practices for enterprise integration.

Anypoint Platform Documentation

NEW QUESTION: 16

Northern Trail Outfitters (NTO) has a new business channel that requires exposing their existing non-MuleSoft APIs to the public. They do not have an Anypoint Flex Gateway.
The NTO digital channel team wants to leverage Anypoint Platform as its API management tool.
What is the most time-efficient mechanism of securing their backend systems?
A. Rewrite the existing APIs using MuleSoft.
B. Create a proxy in front of each existing API.
C. Expose each endpoint as a basic endpoint.
D. Use a basic endpoint with a configured consumer endpoint.
Answer: (SHOW ANSWER)
To expose existing non-MuleSoft APIs and secure them efficiently using Anypoint Platform, you can create API proxies. This approach provides several benefits:
API Proxy Creation:
Creating a proxy involves setting up an intermediary that forwards requests to the existing backend APIs. This allows you to leverage Anypoint Platform's API management capabilities without rewriting the existing APIs.
Proxies can be created quickly and configured to apply various security and governance policies.
Security and Management:
By creating a proxy, you can secure the APIs using Anypoint Platform's features such as rate limiting, authentication, and monitoring.
This method is time-efficient and leverages the robust security features of the Anypoint Platform without significant redevelopment effort.
Anypoint Platform API Proxy Documentation

NEW QUESTION: 17

AnyAirlines is developing an RPA process and is implementing testing best practices. They want to take the RPA process through rigorous testing.
During these tests, where do RPA process test plans execute?

A. On a configured RPA Bot
B. In RPA Manager
C. In RPA Builder
D. In an RPA process runtime
Answer: A (LEAVE A REPLY)
During testing of an RPA process, test plans are executed on a configured RPA Bot. This allows you to simulate real-world scenarios and ensure the RPA process works correctly under various conditions:
On a Configured RPA Bot:
RPA Bots are configured to execute the automated tasks defined in the RPA process. By running test plans on these bots, you can verify the functionality and performance of the RPA process.
This approach ensures that the RPA process is thoroughly tested in an environment that closely mirrors production conditions.
MuleSoft RPA Documentation

NEW QUESTION: 18
Which MuleSoft deployment strategy consists of the control plane and runtime plan hosted by the client?
A. IPrivate Cloud Edition
B. CloudHub
C. Runtime Fabric
D. Hybrid
Answer: D (LEAVE A REPLY)
A hybrid deployment strategy in MuleSoft involves hosting the control plane (Anypoint Platform management and design tools) in the cloud, while the runtime plane (where Mule applications run) is hosted by the client, either on-premises or in their own private cloud:
Hybrid Deployment:
The control plane is managed by MuleSoft and provides centralized management, monitoring, and deployment capabilities.
The runtime plane is hosted by the client, providing flexibility and control over where and how the Mule applications are executed, whether on-premises or in a private cloud environment.
Benefits:
This approach combines the advantages of cloud-based management with the control and customization available in on-premises or private cloud deployments, making it suitable for organizations with specific hosting and compliance requirements.
MuleSoft Hybrid Deployment Documentation

NEW QUESTION: 19
Which type of integration project should be implemented with MuleSoft Composer?

A. Automating UI interactions using image recognition
B. Data transformation from a source system to a target system by a non-technical user
C. Batch processing of larger-than-memory files with conditional logic within the batch steps
D. Long running workflows that require manual steps and approvals by users
Answer: B (LEAVE A REPLY)
MuleSoft Composer is designed for business users to create integrations without deep technical knowledge. It is ideal for scenarios that involve:
Data Transformation and Integration:
Non-technical users can easily connect different systems, automate data transfers, and transform data from one system to another using a no-code interface.
MuleSoft Composer provides pre-built connectors and an intuitive interface to set up these integrations.
Simplified Automation:
The platform is optimized for creating straightforward, rule-based automations where complex coding is not required.
Therefore, automating data transformation tasks by a non-technical user fits perfectly with MuleSoft Composer's capabilities.
MuleSoft Composer Documentation

NEW QUESTION: 20
Northern Trail Outfitters wants to run a bidirectional sync of data between two Salesforce orgs. They want to perform real-time updates between both systems so that if either system is updated, the other one is automatically updated with the new data.
What is the minimum number of Mute-Soft Composer flows needed to meet this requirement?
A. 3
B. 1
C. 2
D. 4
Answer: C (LEAVE A REPLY)
To achieve a bidirectional sync between two Salesforce orgs using MuleSoft Composer, you would need a minimum of two flows.
Flow 1: Sync from Org A to Org B: This flow monitors changes in Org A and updates Org B with the new data whenever a change occurs.
Flow 2: Sync from Org B to Org A: Similarly, this flow monitors changes in Org B and updates Org A with the new data whenever a change occurs.
This setup ensures that any change in either Salesforce org is reflected in the other, maintaining real-time synchronization between the two systems.

NEW QUESTION: 21

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

A. Using best practices, how should the results be consumed by MuleSoft Composer?

B. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.

C. Create a second MuleSoft Composer flow that starts when the RPA process is complete.

D. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.

E. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.

Answer: C (LEAVE A REPLY)

When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:

Second MuleSoft Composer Flow:

Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.

The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.

Trigger Mechanism:

Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.

Best Practices:

This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

MuleSoft Composer Documentation

MuleSoft RPA Documentation

NEW QUESTION: 22

The Ops team at AnyAirlines needs to periodically check the status of an API to see it the connected database is down for maintenance.

Where should the Ops team set up a scheduled API call and view the status history?

A. API Manager Analytics

B. API Functional Monitoring

C. API Manager Alerts

D. API Monitoring Dashboard

Answer: (SHOW ANSWER)

To periodically check the status of an API and see if the connected database is down for maintenance, the Ops team should use API Functional Monitoring:

API Functional Monitoring:
API Functional Monitoring allows you to set up scheduled tests and monitor the functional performance of your APIs. It can be configured to periodically make API calls and check for specific conditions, such as whether the database is down for maintenance.
Scheduled API Calls:
Set up the necessary tests within API Functional Monitoring to periodically call the API and verify its status. These tests can be scheduled to run at regular intervals.
View Status History:
API Functional Monitoring provides a dashboard where you can view the history of these tests, including their results and any failures. This helps in tracking the availability and performance of the API over time.
MuleSoft API Functional Monitoring Documentation

NEW QUESTION: 23
AnyAirlines is developing an RPA process to extract information from a legacy system. To capture the manual workflow, they leverage RPA Recorder.
Which two best practices should they be aware of when working with the autogenerated workflow code? (Choose two.)
A. All autocaptured information is for documentation purposes only.
B. Some autogenerated code must be replaced with more robust or specialized action steps.
C. The autogenerated workflows may contain sensitive information that must be removed.
D. All keystrokes and mouse clicks in the autogenerated code must be disabled before deploying to production.
Answer: B,C (LEAVE A REPLY)
When developing an RPA process using RPA Recorder, it is essential to be mindful of the following best practices concerning the autogenerated workflow code:
Replace Autogenerated Code:
Robustness: Some of the autogenerated code may not be optimized for robustness or specific use cases. It is often necessary to review and replace parts of the autogenerated workflow with more robust or specialized action steps to ensure reliability and accuracy.
Specialization: Customizing the workflow to fit the specific requirements of the process can improve performance and handle exceptions better.
Remove Sensitive Information:
Sensitive Data: Autogenerated workflows might capture sensitive information such as usernames, passwords, or other confidential data. It is crucial to identify and remove or mask this information before deploying the RPA process to production to maintain security and compliance.
Compliance: Ensuring that sensitive information is handled appropriately helps in adhering to data protection regulations and organizational policies.
MuleSoft RPA Documentation

NEW QUESTION: 24
Which API policy can be applied to limit the number of requests an individual client can make to an API?
A. Client ID Enforcement
B. Spike Control
C. Rate limiting - SLA-Based
D. OAuth 2.0 access token enforcement
Answer: C (LEAVE A REPLY)
The Rate Limiting - SLA-Based policy in Anypoint Platform is designed to control the number of requests an individual client can make to an API. This policy is highly configurable and allows you to set specific limits based on service level agreements (SLAs).
Rate Limiting - SLA-Based:
This policy helps protect APIs from being overwhelmed by too many requests by enforcing a limit on the number of requests a client can make within a specified time frame.
You can define different rate limits for different tiers of clients, ensuring fair usage and protecting backend services.
Anypoint Platform Rate Limiting Documentation

NEW QUESTION: 25
A Salesforce admin for AnyAirlines constructs a MuleSoft Composer flow that retrieves a record based on a unique ID using the Get Records action from a Salesforce connector. They will use the result to send a Slack message.
How can they achieve this task?
A. 1. Add a Slack action step after the Salesforce action step.
B. 1. Add a For Each loop after the Salesforce action step iterating over the collection of Salesforce records.
C. 1. Add an If/Else Block after the Salesforce action step, which contains a branch checking if the Salesforce action step returned exactly one record.
D. 1. Add a Slack action step after the Salesforce action step.
Answer: D (LEAVE A REPLY)
* Salesforce Action Step: Start by adding a Salesforce action step that uses the Get Records action to retrieve the record based on a unique ID. This action retrieves the specific record needed.
* Add Slack Action Step: After retrieving the record, add a Slack action step. This step will be used to send the message to Slack.
* Use the Record: Use the retrieved record directly to construct the message in the Slack action step. This ensures the message contains the relevant information from the Salesforce record.

* No Need for Collection Handling: Since the Get Records action retrieves a single record based on a unique ID, there is no need to handle collections or iterate through records.

NEW QUESTION: 26
An RPA developer is building the implementation of an RPA process based on the BPMN created by a colleague. In the BPMN, they see the symbol below:
What does the symbol represent?
A. A cleanup activity that is performed at the end of the process to ensure all running applications are closed
B. An activity that is performed if an error occurs during processing
C. One possible endpoint for the process
D. A point in the process where different activities are performed under different circumstances
Answer: D (LEAVE A REPLY)

NEW QUESTION: 27
Northern Trail Outfitters set up a MuleSoft Composer integration between Salesforce and NetSuite that updates the Order object in Salesforce with data from NetSuite.
When an order in Salesforce is updated as complete, the Last Order Date custom field on the related account should automatically update with the date the order was marked complete.
What is the best practice to achieve this outcome?
A. Update the MuleSoft Composer integration to also update the related account when the order is marked complete.
B. Replace the MuleSoft Composer integration with a three-tier API integration between Salesforce and NetSuite using Anvpoint Platform.
C. Create a record-triggered flow on the Order object that updates the related account when the order is marked complete.
D. Create a MuleSoft RPA bot that updates the related account when the order is marked complete.
Answer: C (LEAVE A REPLY)
To update the Last Order Date custom field on the related account when an order is marked complete in Salesforce, the best practice is to use a record-triggered flow:
Create a Record-Triggered Flow:
Use Salesforce Flow to create a record-triggered flow on the Order object.
Set the flow to trigger when a record is updated (specifically, when the order status is updated to complete).
Update the Related Account:
In the flow, use a Get Records element to fetch the related Account record.
Use an Update Records element to update the Last Order Date custom field on the related Account with the date the order was marked complete.

This approach ensures that the data remains within Salesforce and is updated immediately as part of the same transaction, providing a robust and efficient solution.
Salesforce Flow Builder Documentation

NEW QUESTION: 28
Northern Trail Outfitters recently purchased another company. Both companies have separate Salesforce orgs. One business user wants to automate a workflow which requires data transfer between both orgs and automates a distinct multi-user workflow within one of the orgs.
According to best practices, which two hyperautomation tools should these workflows use? (Choose two.)
A. Flow Orchestration
B. Anypoint Platform
C. MuleSoft RPA
D. MuleSoft Composer
Answer: A,D (LEAVE A REPLY)
To automate a workflow that requires data transfer between two Salesforce orgs and a distinct multi-user workflow within one of the orgs, the following tools are recommended:
MuleSoft Composer:
MuleSoft Composer allows for easy and quick integration between multiple systems, including different Salesforce orgs. It provides a no-code solution for connecting and syncing data across Salesforce instances.
Use MuleSoft Composer to create the integration flows that handle the data transfer between the two Salesforce orgs.
Flow Orchestration:
Salesforce Flow Orchestration is ideal for automating complex, multi-step business processes involving multiple users within a single org.
Use Flow Orchestration to design and automate the distinct multi-user workflow within one of the Salesforce orgs. It helps in coordinating user tasks, approvals, and other business processes seamlessly.
Combining these two tools leverages their strengths to handle both the integration and the complex workflow automation efficiently.

NEW QUESTION: 29
Northern Trail Outfitters (NTO) wants to automate a multi-step process that spans several departments.
How do Interactive Steps in Flow Orchestration help NTO involve users at key steps of the process?
A. They allow the user to interact with the process in between automated backend steps.

B. They leverage AI processing to automatically interact with the customer and collect customer data.
C. They enable users to collaborate on specific work items.
D. They allow the user to interact directly with external systems through the Salesforce UI.
Answer: A (LEAVE A REPLY)
