NEW QUESTION: 1

Universal Containers wants to introduce data volume testing to resolve ongoing performance defects earlier in the lifecycle. Regulations prohibit the use of production data in non-production environments.

Which two options can the architect recommend?

Choose 2 answers

- A. Use Query Analyzer in production.
- B. Generate mock data that mimics production data shape and volume.
- C. Request a partial Sandbox copy after the next Salesforce release.
- D. Perform data masking on full sandbox after a refresh.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 2

Universal Containers (UC) is working on a major project and has determined that its approach to a certain feature will no longer work with an upcoming Salesforce platform release (e.g., Winter to Spring).

What should a Technical Architect recommend to address this issue?

- A. Continue development in a non-upgraded sandbox, and have the developer update the API version of the code to the upcoming API version for testing purposes.
- B. Determine the developer sandbox upgrade schedule, and have the developer refactor the approach to the feature in the upgraded sandbox.
- C. Submit a request to Salesforce to enable the 'delay upgrade' feature in their org. Have the UC administrator schedule the upgrade for a later date.

D. Continue with the current approach since Salesforce will rectify the issue prior to updating the production environment to the new platform release.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 3

The CTO at Universal Containers decided to implement the Scrum framework for its agile teams, and communicated a set of Scrum principles to the company.

Which describes a Scrum principle?

- A. Embrace change by working on a different scope every day
- B. Respect other teams by not doing their work (a developer should not test the software)
- C. Deliver working software, so if a software component is working, avoid changing it
- D. Create transparency by being honest and clear about timing, planning, and obstacles

Answer: C (LEAVE A REPLY)

Explanation/Reference: <https://www.productplan.com/glossary/agile-principles/>

NEW QUESTION: 4

Universal Containers is building a new complex integration to a legacy system. the legacy system is also going through a major upgrade. Senior leadership has committed to the board that the combined programs will be completed on time. What is the risk with this plan?

- A. The deadline is scheduled during a Salesforce release
- B. The project team has decided to use the Waterfall methodology
- C. The legacy system team is using an Agile methodology
- D. Multiple work -streams with dependencies could impact the go-live

Answer: D (LEAVE A REPLY)

NEW QUESTION: 5

Universal containers has proposed using a Developer Edition org to stage changes to their Customer Community, which includes multiple custom Visualforce pages and components. Which three risks should a Technical Architect consider in this strategy? Choose 3 answers

- A. Developer Edition orgs do not run on production servers and will not perform well during testing.
- B. Developer Edition orgs cannot have sandboxes, which will make team development difficult.
- C. Code changes cannot be deployed from a Developer Sandbox to Production.
- D. Developer Edition orgs have limited user counts and low data volume limits, which will make User Testing difficult.
- E. Changes Sets cannot be used to deploy from Developer Edition to Production which will make deployment more complex

Answer: A,B,D (LEAVE A REPLY)

NEW QUESTION: 6

What are three advantages of using the SFDX?

Choose 3 answers

- A. Can quickly deploy metadata using Execute Anonymous.
- B. Can use native Deployment Rollback Tool to quickly revert to prior state.
- C. Can create scratch orgs.
- D. Can store code on a local machine, or a version control system.
- E. Can Install application metadata from a central repository.

Answer: C,D,E ([LEAVE A REPLY](#))

NEW QUESTION: 7

Universal Containers is about to begin Development work on a new project in their Salesforce org that will take many months to complete. UC is concerned about how critical bugs will be addressed for existing live functionality. What is the recommended release management strategy to address this concern?

- A. Address critical bugs in the Development sandboxes and push those changes to production separately.
- B. Include fixes for critical bugs in the ongoing Development sandboxes so that they will be released with the other code.
- C. Utilize a dedicated developer pro sandbox to address critical bugs and release to production.
- D. Keep teams separate until the end of the project and create a Full Copy sandbox to merge their work then.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 8

Universal Containers wants to implement a release strategy with major releases every four weeks and minor releases every week. Major releases follow Development, System Integrated Testing (SIT), User Acceptance Testing (UAT) and Training. Minor releases follow Development and UAT stages.

What represents a valid environment strategy consideration for UAT?

- A. Minor releases use Developer and Major releases use Full copy.
- B. Minor releases use Partial copy and Major releases use Full copy.
- C. Minor and Major releases use separate Developer pro.
- D. Minor and Major releases use the same Full copy.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 9

Universal Containers (UC) operates from North America and does business within North America. UC has just acquired a local company in Asia to start operating from Asia.

Currently, these two business units operate in two different languages. Both units have different sales processes and have to comply strictly with local laws. During the expansion phase, UC would like to focus on innovation over standardization.

What should an Architect recommend given the scenario?

- A. Opt for Multi-org.strategy, standardized sales process, common rules, and same locale across orgs.
- B. Opt for Single-org strategy, standardized sales process, common rules, and business unit-specific locale.
- C. Opt for Multi-org strategy, each org has its own sales process, common rules, and operate in locale.
- D. Opt for Single-org strategy, standardized sales process, common rules, and same locale for all business units.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 10

Which two groups are responsible for the creation and execution of Release Management processes? Choose 2 answers

- A. Steering Committee
- B. End Users
- C. Dev/Build Team
- D. Center of Excellence

Answer: C,D ([LEAVE A REPLY](#))

NEW QUESTION: 11

Universal Containers (UC) has a recruiting application using Metadata API version 35, and deployed it in production last year. The current Salesforce platform is running on API version 36.A new field has been introduced on the object Apex page in API version 36. A UC developer has developed a new Apex page that contains the new field and is trying to deploy the page using the previous deployment script that uses API version 35. What will happen during the deployment?

- A. The deployment script will fail because the platform doesn't support the previous API version 35.
- B. The deployment script will pass because the new field is supported on the current platform version.
- C. The deployment script will pass because the new field is backward compatible with the previous API version 35.
- D. The deployment script will fail because the new field is not known for the previous API version 35.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 12

Universal Containers (UC) has integrated with their on-premise billing system using Salesforce Connect. The data is configured using an External Object in sandbox. UC wants to deploy the external object to production using the Metadata API and would like to know what Metadata types to choose for deployments to production.

Which two options are valid metadata types related to deployment of external objects? Choose 2 answers.

- A. In change sets, external objects are included in the External Object component.
- B. In change sets, external objects are included in the custom object component.
- C. In the Metadata API, the External Object metadata type represents external objects.
- D. In the Metadata API, the Custom Object metadata type represents external objects.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 13

Universal Containers' developers are working on a Visualforce page in a sandbox when an administrator adds a new field to Production. Which two approaches could an architect suggest to an administrator that would assist the developers in their development process? Choose 2 answers

- A. Refresh the developer sandbox to ensure that changes made in production are reflected in the sandbox that the developers are working on (Missed)
- B. Use Salesforce-to-Salesforce to deploy the changes from Production to the sandbox, to ensure that changes made in production are reflected in the sandbox that the developers are working on
- C. Use a Change Set to deploy the changes from Production to the sandbox, to ensure that changes made in production are reflected in the sandbox that the developers are working on (Missed)
- D. Manually replicate the same changes in the developer sandbox to ensure that changes made in production are reflected in the sandbox that the developers are working on

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 14

Universal Containers (UC) deploys major releases on a monthly schedule. In recent months, the team has noticed the deployment time has increased two-fold from 2 hours to 4 hours. The team wants to get back to reasonable deployment times. Which three issues could be affecting their deployment times? Choose 3 ans

- A. The team is highly constrained with pre-deployment and post-deployment changes.
- B. The deployments are being scheduled during off peak hours, which is not the best time.
- C. Users are working in the org during deployment locking can affect users and the deployment.
- D. Some components profiles, custom junction objects, and fields take longer to process than others.
- E. The number and complexity of Apex tests will have a large impact on the deployment time.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 15

The team at Universal Containers is building an application on Java that will interact with its Salesforce application. They want to use SOQL queries to retrieve and make changes to smaller pieces of Salesforce metadata through this application.

Which API should the team leverage?

- A. Metadata API
- B. Any Salesforce API
- C. Tooling API
- D. User Interface API

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 16

Which two groups are responsible for the creation and execution of Release Management processes? Choose 2 answers

- A. Dev/Build Team (Missed)
- B. End Users
- C. Center of Excellence (Missed)
- D. Steering Committee

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 17

Universal Containers requires that all sandboxes that have not been recently refreshed must also receive the newest changes to production. This must be done before any functionality from that environment can be moved to production. Which deployment tool would allow this deployment process to be managed in an automated fashion?

- A. Workbench
- B. Force.com IDE
- C. Change Sets
- D. Force.com Migration Tool

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 18

What is the process used to initiate a connection for change sets?

- A. Modify the source org to allow an outbound connection to the target org
- B. Modify the source org to allow an inbound connection to the target org
- C. Modify the target org to accept an outbound connection from the source org
- D. Modify the target org to accept an inbound connection from the source org

Answer: A,D ([LEAVE A REPLY](#))

NEW QUESTION: 19

Universal Containers (UC) is working with Salesforce CPQ, which uses configuration SObjects to drive business logic.

What are two best practice recommendations an architect should propose to allow UC to deploy CPQ features as part of their CI/CD process? (Choose two.)

- A. Use data loader to deploy CSV files
- B. Build an Apex framework to deploy CPQ records
- C. Use a third-party product
- D. Use an open source SFDX plugin and version control

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 20

Which two statements are accurate about why Mock objects are needed when writing test classes? (Choose two.)

- A. Mock can also be used on the classes that extend the batchable interface to bypass the batch jobs.
- B. Using a Mock allows the test class to bypass the dependencies of other objects, methods, state, or behaviors. Therefore, the developer has total control of his own code.
- C. A Mock is needed whenever the code makes an HTTP callout.
- D. Some methods are invoking long running processes, using Mock is a shortcut of bypassing the long executions.

Answer: B,D ([LEAVE A REPLY](#))

Explanation/Reference: <https://trailhead.salesforce.com/en/content/learn/v/modules/unit-testing-on-the-lightning-platform/mock-stub-objects>

NEW QUESTION: 21

Universal Containers (UC) is considering implementing a minor change policy for a series of low-risk user stories that are commonly received by the UC admins. The policy would allow admins to make these changes directly in production. UC does not have continuous integration/continuous delivery (CI/CD) in place.

Which three best practices should the architect suggest UC follow for their new change policy? (Choose three.)

- A. All changes should still be tested
- B. Minor changes should be thoroughly documented and follow some type of standard cadence
- C. Downstream environments will not be automatically updated when production changes

- D. CI/CD is required in to successfully manage minor changes
- E. Minor changes do not need to be documented and can be made at any time

Answer: A,B,D (LEAVE A REPLY)

NEW QUESTION: 22

Universal Containers has discovered a Sev0 defect in production. Tens of thousands of records will be created with incorrect data in minutes, producing significant brand damage as a consequence. The Salesforce administrator has suggested that the defective text field be replaced with a new picklist field directly in production. The page layout will be modified so that the text-field is removed and the new picklist field added.

What should the Salesforce architect advise?

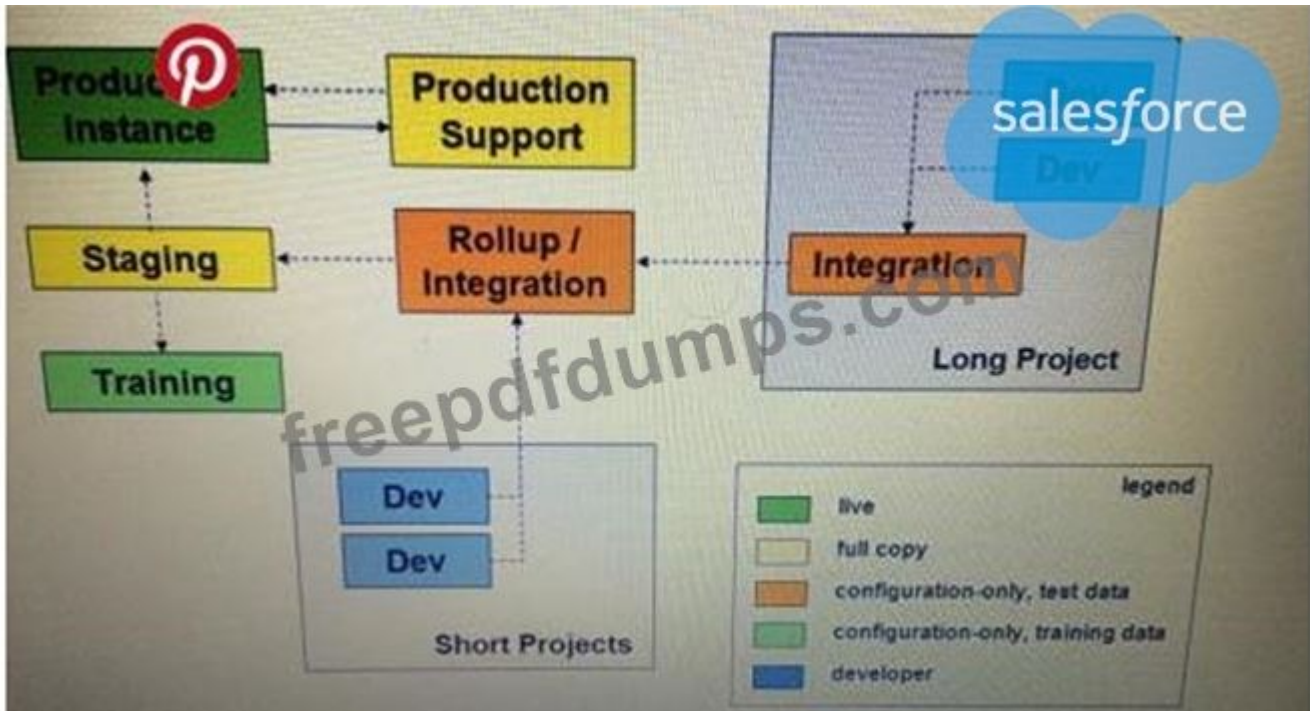

- A. Pair with the administrator, and review each change as it happens
- B. Call the security team and begin organizing a penetration test
- C. Deny the suggestion and explain to everyone that the risk is too high and the next release window is on the weekend
- D. Explain that only developers are certified to make changes directly in production

Answer: (SHOW ANSWER)

Explanation/Reference:

NEW QUESTION: 23

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

- A. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live

- B.** Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live
- C.** One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging.
Deploy from Staging to Production at go-live
- D.** Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live
- Answer: D ([LEAVE A REPLY](#))**

NEW QUESTION: 24

Cloud Kicks is considering using an automated testing tool to help manage deployments between environments.

When should the architect recommend the use of an automated testing tool?

- A.** Automated tests should be run when branches are merged.
- B.** Automated tests should be run dally in all Developer Orgs.
- C.** Automated tests should be run daily in all Developer Orgs, and when branches are merged.
- D.** Automated tests should be run only when merging into Full or Partial Copy sandboxes.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 25

Universal Containers CUC) has developed extensions of Salesforce Service Cloud for the use of its customer service teams using the change set development model.

Recently, UC acquired a company that develops extensions of an AppExchange app. The development team of the acquired company uses the org development model. The Universal Containers CTO wants both teams to work on a single org and follow the same set of processes. Which development model should the architect recommend to be used by the consolidated development team?

- A.** Change set development model, because UC is already using it, so it will face less resistance.
- B.** Org development model, because the acquired company's team is already using it, and it is better than the change set development model.
- C.** Package development model, because it allows packages to be created and deployed using declarative (point-and-click) development tools, without writing code.
- D.** Package development model, so teams can build release artifacts that can be tested and released independently from artifacts for other projects.

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 26

Universal Containers CUC) has multi-cloud architecture in a single org. The Sales Cloud dev team is working in a Dev Pro sandbox (DevProl) of delivering a release In three months. The business requirements from Service Cloud warrant a quicker release in four weeks, but need part of the Sales Cloud work that is completed in DevProl. The decision of using a separate Dev Pro

sandbox (DevPro2) is still pending. The DevPro1 was upgraded to preview for next salesforce major release two weeks ago.

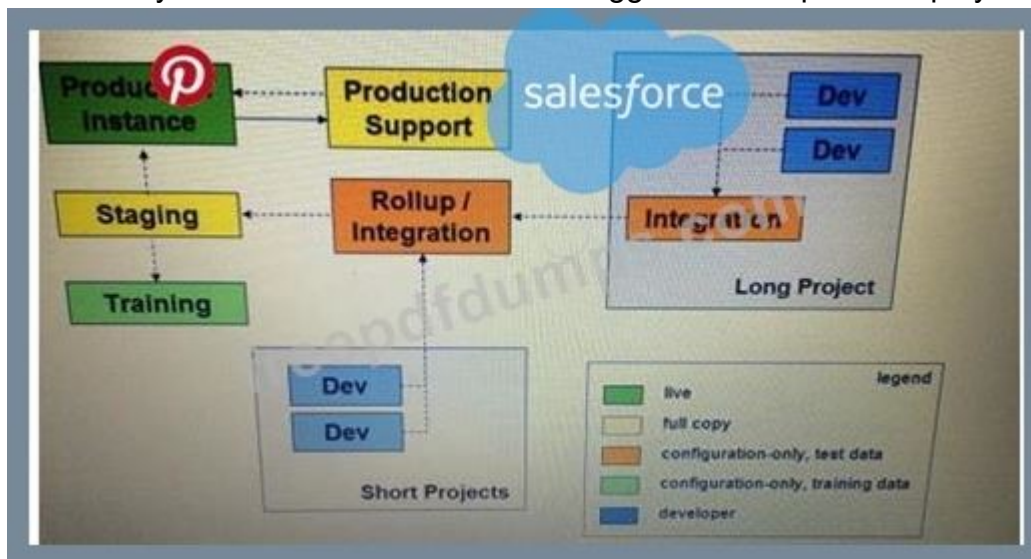

What should an Architect recommend?

- A. Push back on the requirements because adding another work stream will bring some risks with it.
- B. Ask the second work stream team to work on the same DevPro1 sandbox.
- C. Clone the DevPro1 sandbox and name it DevPro2 for the second work stream to work on the Service Cloud requirements.
- D. DevPro1 cannot be cloned because it is on a different version from Production. Just create a new DevPro2, and migrate metadata from DevPro1.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 27

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

- A. Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live
- B. One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging. Deploy from Staging to Production at go-live
- C. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live
- D. Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 28

Universal Containers (UC) has a large user base (over 300 users) and was originally implemented eight years ago by a Salesforce Systems Integration Partner. Since then, UC has made a number of changes to their Visualforce pages and Apex classes in response to customer requirements, made by a variety of Vendors and internal teams.

Which three issues would a new Technical Architect expect to see when evaluating the code in this Salesforce org? (Choose three.)

- A. Duplicated logic across Visualforce pages and Apex classes performing similar tasks.
- B. Multiple unit test failures would be encountered.
- C. Custom-built JSON and String manipulation classes that are no longer required.
- D. Broken functionality due to Salesforce upgrades.
- E. Multiple triggers on the same object, making it hard to understand the order of operations.

Answer: A,C,E ([LEAVE A REPLY](#))

NEW QUESTION: 29

Universal Containers (UC) has a recruiting application using Metadata API version 35, and deployed it in production last year. The current Salesforce platform is running on API version 36. A new field has been introduced on the object Apex page in API version 36. A UC developer has developed a new Apex page that contains the new field and is trying to deploy the page using the previous deployment script that uses API version 35. What will happen during the deployment?

- A. The deployment script will pass because the new field is supported on the current platform version.
- B. The deployment script will pass because the new field is backward compatible with the previous API version 35.
- C. The deployment script will fail because the new field is not known for the previous API version 35.
- D. The deployment script will fail because the platform doesn't support the previous API version 35.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 30

In architect is working on a project that relies on functionality that cannot be deployed via the Metadata API.

What is the best practice for making sure these components are deployed successfully?

- A. Utilize the metadata API's deployAllComponents call
- B. Document deployment steps for any components that cannot be automatically deployed
- C. Generate and deploy a change set that enables the required settings
- D. Generate and install a managed package that enables the required settings

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 31

Universal Containers is a global organization that maintains regional production instances of Salesforce. One region has created a new application to track shipping containers. The CIO has requested that this new application be used globally by all the Salesforce instances and further maintained and modified regionally by local administrators.

Which two deployment tools will support the request?

Choose 2 answers

- A. VS Code with Salesforce Extension
- B. ANT Migration Tool
- C. Developer Console
- D. Change Sets B

Answer: A,B ([LEAVE A REPLY](#))

Valid Development-Lifecycle-and-Deployment-Designer Dumps shared by Actual4test.com for Helping Passing Development-Lifecycle-and-Deployment-Designer Exam! NEW QUESTION: 32

Universal Containers (UC) has created a custom REST web service. This web service receives Orders and Order Line Items data from an external endpoint and runs business logic and validations on it before inserting it into the database. UC is expecting to receive more than 100K orders a day and each order can have up to 10 line items. Each inbound request will contain only one order and its corresponding line items.

What two testing types should an architect recommend to ensure users don't face platform slowdowns during peak business hours? Choose 2 answers

- A. Performance Testing
- B. Unit Testing
- C. Stress Testing
- D. Load Testing

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 33

Universal Containers (UC) had added a Service team to the Salesforce Platform. The Service team would like to have a few dozen of the service centers entered into the system as technical

reference data. The service centers are made searchable in many different web forms and rather independent from all other business entities. In the past, they had to manually add any new service centers in each sandbox in the code migration path, they would like to eliminate the manual work if it is possible.

What is an optimal way to accomplish this requirement?

- A. Define a brand-new custom object with a picklist field to host all of the service centers.
- B. Add the service centers to a hierarchical custom settings.
- C. Add all of the service centers to a custom metadata type.
- D. Add the service centers to a list custom settings.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 34

Universal Containers (UC) have developed a managed package targeted for AppExchange. The product includes some Apex code to customize and create layouts. UC is in the testing phase of the package, so it is not certified yet. During testing on the target org, the Apex code for the layouts fails.

Why are the Apex classes not able to access the metadata of the target org during testing?

- A. UC needs to get the managed package certified by the Salesforce security review
- B. The solution is flawed. UC should utilize the Tooling API from a web service call to modify the layouts
- C. Apex Settings to allow the access to metadata is not switched on
- D. UC needs to turn on Apex Settings within the custom metadata type

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 35

Universal Containers's architect is documenting the application lifecycle management (ALM) process to communicate it to the development teams from different implementation partners. Which three steps apply to any Salesforce development project?

Choose 3 answers

- A. Build Release
- B. Develop
- C. Test
- D. Continuous Integration
- E. Change Sets

Answer: A,B,D ([LEAVE A REPLY](#))

NEW QUESTION: 36

Cloud Kicks is switching to Salesforce from a different CRM. They have existing datasets for all standard Salesforce objects. In which optimized order should the architect recommend these objects be loaded?

- A. Accounts, Contacts, Leads, Products, Opportunities, Opportunity Line Items

- B. Accounts, Contacts, Opportunities, Products, Opportunity Line Items, Leads
- C. Leads, Accounts, Contacts, Products, Opportunities, Opportunity Line Items
- D. Leads, Contacts, Accounts, Opportunities, Products, Opportunity Line Items

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 37

Universal Containers (UC) is working on a major project and has determined that its approach to a certain feature will no longer work with an upcoming Salesforce platform release (e.g., Winter to Spring). What should a Technical Architect recommend to address this issue?

- A. Continue with the current approach, since Salesforce will rectify the issue prior to updating the production environment to the new platform release
- B. Determine the developer sandbox upgrade schedule, and have the developer refactor the approach to the feature in the upgraded sandbox
- C. Continue development in a non-upgraded sandbox, and have the developer update the API version of the code to the upcoming API version for testing purposes
- D. Submit a request to Salesforce to enable the 'delay upgrade' feature in their org. Have the UC administrator schedule the upgrade for a later date

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 38

Since Universal Containers (UC) has adopted agile methodologies, the CEO is requesting the development teams to deliver more and more work in shorter time frames. The CTO responds by saying the developers are not able to deliver the jobs they are committing to.

What evidence can be gathered in an agile tool to support the CTO's claims?

- A. A burndown chart showing the team misses their forecast sprint after sprint
- B. The definition of done (DoD)
- C. A Kanban board showing there's always the maximum allowed amount of work in progress (WIP)
- D. A burndown chart showing team finishes early sprint after sprint

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 39

Universal Containers is adopting Scrum as an agile methodology and wants to choose a software tool to support the adoption. What three key features of an agile development support tool should an architect look for? Choose 3 answers

- A. Work (for example, user stories or tasks) assignment
- B. Product backlog prioritization
- C. Email notifications when work is created or changed
- D. Sprint backlog management
- E. Kanban board

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 40

Universal Containers (UC) is an enterprise financial company that operates in EMEA, AMER, and APAC.

Because of regulatory requirements, UC has a separate Salesforce org for each region. Each org has its own customizations that fit for the region needs, but there are also standard processes that apply to all regions requirements.

As the deployment architect, what should be considered for the multi-org deployment strategy?

- A. Deploy metadata to production orgs using package development model
- B. Deploy metadata to production orgs using unmanaged packages
- C. Deploy metadata to production orgs using managed packages
- D. Deploy metadata to production orgs using change sets

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 41

Universal Containers (UC) operates globally from different geographical locations. UC is revisiting their current org strategy. Which three factors should an Architect consider for a single strategy?

Choose 3 answers

- A. Consistent processes across the business.
- B. Fewer inter Dependencies.
- C. Increased ability to collaborate.
- D. Tailored implementation.
- E. Centralized data location.

Answer: A,C,E ([LEAVE A REPLY](#))

NEW QUESTION: 42

Universal Containers is planning to release simple configuration changes and enhancements to their Sales Cloud. A Technical Architect recommend using change sets. Which two advantages would change sets provide in this scenario? Choose 2 answers

- A. The ability to deploy a very large number of components easily.
- B. The ability to track changes to component.
- C. An easy way to deploy related components.
- D. A simple and declarative method for deployment.

Answer: C,D ([LEAVE A REPLY](#))

NEW QUESTION: 43

Universal Containers is about to begin the release of a major project. To facilitate this, they have several sandboxes to make their deployment train. These sandboxes are a mix of preview and non-preview instances.

What should the architect recommend?

- A. Contact support to rollback the release when Salesforce upgrades the sandboxes,

- B. Refresh all non-preview sandboxes when the release management team has time.
- C. Refresh all non-preview sandboxes during the release preview window.
- D. No advice needed, mixing instance types is important for regression testing.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 44

An Architect is working on a Universal Containers project, and due to security concerns they cannot provide the Architect with production access. Instead, a central release management team will be responsible for performing production deployments for all development teams. How should an Architect leverage the Metadata API to ensure any metadata components necessary to deploy the project's functionality are properly communicated to the release management team?

- A. Send a package.xml file with associated metadata in a .zip file to the Release Management team
- B. Provide the Release Management team a copy of the audit trail from the sandbox you wish to deploy from
- C. Create a change set in each sandbox and download the package.xml file for the release management team
- D. Provide a spreadsheet of all components and utilize the metadata API's readMetadata call

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 45

Universal Containers is in the process of testing their integration between salesforce and their on-premise ERP systems. The testing team has requested a sandbox with up to 10,000 records in each object to benchmark the integration performance. What is the fastest approach an Architect should recommend?

- A. Spin off a partial copy sandbox using a sandbox template with all the objects required for testing the integration.
- B. Spin off a Development sandbox, migrate the metadata and load the data using data loader.
- C. Spin off a Developer pro sandbox, migrate the metadata and load the data using data loader.
- D. Spin off a full copy sandbox with all the objects that are required for testing the integration.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 46

There are many types of quality assurance techniques that can help minimize defects in software projects.

Which two techniques should an architect recommend, for Universal Containers to incorporate into its overall CI/CD pipeline?

Choose 2 answers

- A. Static code quality analysis
- B. Business verification testing
- C. Stress testing

D. Automated browser testing

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 47

Universal Containers is starting a Center of Excellence (COE). Which two user groups should an Architect recommend to join the COE?

- A. Program Team
- B. Inside Sales Users.
- C. Call Center Agents
- D. Executive Sponsors.

Answer: A,D ([LEAVE A REPLY](#))

NEW QUESTION: 48

Universal Containers (UC) is embarking on a large program of work, with different projects and different vendors. UC created a center of excellence (COE) that is struggling with scope creep between the different projects.

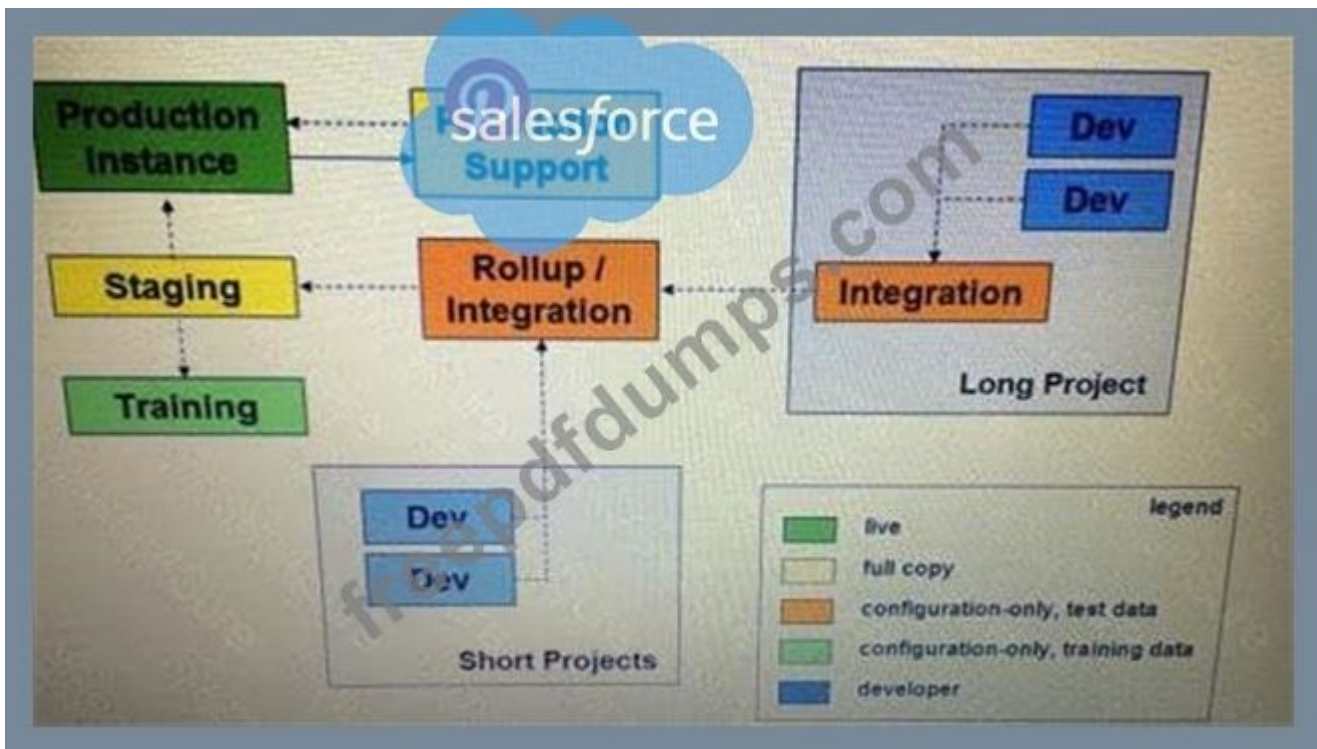

What role should the architect suggest be added to the COE?

- A. Release managers
- B. Change managers
- C. Scrum master
- D. Product owner

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 49

Which statement is true for the Staging sandbox in the following diagram?

- A. Salesforce major releases (e.g., Winter to Spring) always occur in Staging and Production at the same time
- B. The Staging environment can only be updated once every two weeks
- C. When created or refreshed, the Staging sandbox is a full replica of Production
- D. The Staging sandbox is automatically refreshed on a schedule set by the administrator

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 50

Which two project situations favor an Agile methodology? Choose 2 answers

- A. An environment with a heavy investment in DevOps capabilities for rapid testing and deployment
- B. A project with well-defined requirements and complex interactions between front- and back - end systems
- C. A project to be executed by a third party, with a fixed and formal scope, budget, and timeline
- D. A digitization project to update an existing customer -facing process and enable quick adjustments

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 51

Universal Containers is in the process of testing their integration between Salesforce and their on-premise Enterprise Resource Planning systems. The testing team has requested a sandbox with up to 10,000 records in each object to benchmark the integration performance.

What is the fastest approach an Architect should recommend?

- A. Spin off a Developer Pro sandbox, migrate the metadata, and load the data using data loader
- B. Spin off a Full copy sandbox with all the objects that are required for testing the integration.

C. Spin off a Partial copy sandbox using a sandbox template with all the objects required for testing the integration.

D. Spin off a Development sandbox, migrate the metadata, and load the data using data loader.

Answer: (SHOW ANSWER)

Explanation

NEW QUESTION: 52

When replacing an old legacy system with Salesforce, which two strategies should the plan consider to mitigate the risks associated with migrating data from the legacy system to Salesforce? Choose 2 answers?

A. Use a full sandbox environment and perform test runs of data migration scripts/processes with real data from the legacy system.

B. Identify the data relevant to the new system, including dependencies, and develop a plan/scripts for verification of data integrity.

C. Use a full sandbox environment for all the systems involved, a full deployment plan with test data generation scripts, and full testing including integrations.

D. Migrate users in phases based on their functions, requiring parallel use of legacy system and Salesforce for certain period of time.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 53

Universal Containers (UC) has two major releases every year and the team always run into longer deployment times. In which 2 ways can UC reduce deployment time? Choose 2 answers?

A. Specify the test to run by using RunSpecifiedTests test level.

B. Deploy components in groups to reduce deployment time.

C. Validate the deployment before migrating components to production.

D. Use recent deployment validations and the quick deploy feature.

Answer: A,D (LEAVE A REPLY)

NEW QUESTION: 54

Universal Containers (UC) Customer Community is scheduled to go live in the Europe, Middle East, and Africa (EMEA) region in 3 months. UC follows a typical centralized governance model. Two weeks ago, the project stakeholders informed the project team about the recent changes in mandatory compliance requirements needed to go live. The project team analyzed the requirements and have estimated additional budget needs of 30% of the project cost for incorporating the compliance requirements.

Which management team is empowered to approve this additional budget requirements?

A. Project Management Committee

B. Change Control Board

C. Security Review Committee

D. Executive Steering Committee

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 55

Universal Containers (UC) has recently acquired other companies that have their own Salesforce orgs. These companies have been merged as new UC business units.

The CEO has requested an architect to review the org strategy, taking into consideration two main factors:

- * The CEO wants business process standardization among all business units.
- * Business process integration is not required as the different business units have different customers and expertise.

Which org strategy should the architect recommend in this scenario, and why?

- A.** Single-org strategy, as the high level of business process standardization will be easier to implement in a single org.
- B.** Multi-org strategy, as it is uncommon for the diversified business units to get used to working in the same space as the other business units.
- C.** Single-org strategy, as costs increase as the number of orgs go up.
- D.** A Multi-org strategy, as they could deploy a common managed package into the orgs of the different business units.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 56

Which statement is true for the Staging sandbox in the following diagram?

- A.** Salesforce major releases (e.g., Winter to Spring) always occur in Staging and Production at the same time
- B.** The Staging sandbox is automatically refreshed on a schedule set by the administrator
- C.** The Staging environment can only be updated once every two weeks
- D.** When created or refreshed, the Staging sandbox is a full replica of Production

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 57

Universal Containers (UC) is embarking on a large program of work, with different projects and different vendors. UC created a center of excellence (COE) that is struggling with scope creep between the different projects.

What role should the architect suggest be added to the COE?

- A. Release managers
- B. Scrum master
- C. Change managers
- D. Product owner

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 58

Why does Salesforce prohibit Stress Testing against Production?

- A. It causes Internet congestion
- B. There is not enough CPU
- C. It is blocked by data center infrastructure
- D. It is a shared environment

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 59

A Salesforce Administrator has initiated a deployment using a change set. The deployment has taken more time than usual.

What is a potential reason for this?

- A. The change set includes field type changes for some objects.
- B. The change set includes new custom objects and custom fields.
- C. The change set includes changes to permission sets and profiles.
- D. The change set performance is independent of included components.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 60

Product owners at Universal Containers want to ensure that all the requirements have test cases associated with them so that no functionality is left untested during user acceptance testing.

What project artifact can help meet the needs of the business?

- A. User acceptance test scripts
- B. Test execution plan
- C. Requirement traceability matrix
- D. Testing strategy

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 61

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning.

Which two decisions should the Architect make when planning for releases? (Choose two.)

- A. How to roll back to the previous Salesforce release if there are issues.
- B. Whether Salesforce will wait to upgrade the pod until after a UC release is complete.
- C. When to test a new UC feature release on a preview sandbox.
- D. How to test existing functionality to ensure no regressions are introduced.

Answer: A,C (LEAVE A REPLY)

NEW QUESTION: 62

Universal Containers is adopting Scrum as an agile methodology and wants to choose a software tool to support the adoption. What three key features of an agile development support tool should an architect look for? Choose 3 answers

- A. Kanban board
- B. Sprint backlog management
- C. Work (for example, user stories or tasks) assignment
- D. Email notifications when work is created or changed
- E. Product backlog prioritization

Answer: A,C,E (LEAVE A REPLY)

NEW QUESTION: 63

Northern Trail Outfitters (NTO) recently acquired Eastern Trail Outfitters (ETO). NTO's sales leadership team had hands-on experience with the ETO's Sales Optimization app and have given the feedback that the app would benefit NTO's sales team.

Which option should the architect recommend for having ETO's Sales Optimization app in NTO's Salesforce org in the shortest possible time?

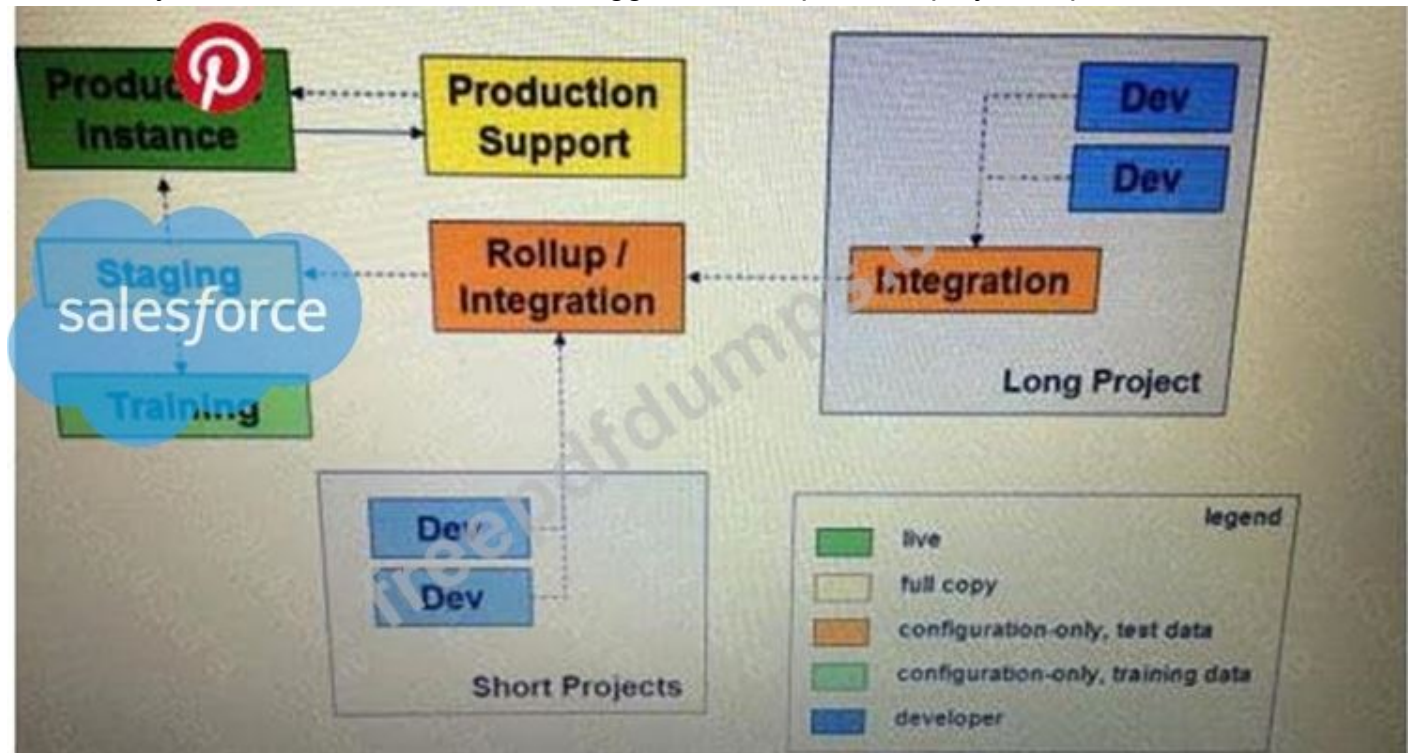

- A. Create a core team and build the Sales Optimization app in NTO's org.
- B. Create a managed package of the app and deploy in NTO's org.

- C. Create an unmanaged package of the app and deploy in NTO's org.
- D. Create users in ETO's org and provide access to NTO's sales team.

Answer: D (LEAVE A REPLY)

NEW QUESTION: 64

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

- A. Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live
- B. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live
- C. Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live
- D. One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging.

Deploy from Staging to Production at go-live

Answer: C (LEAVE A REPLY)

NEW QUESTION: 65

Universal Containers has a stable continuous integration process and all stakeholders are happy. However, user testing takes a long time, as data has to be set up.

What should an Architect do to address this problem?

- A. Include automated sample data during deployment.
- B. Advise the project manager to assign more users to create test data.

- C. Train business users to create test data more efficiently.
- D. Test data creation is outside the scope of continuous integration.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 66

Universal Containers has seven orgs in different regions. Its processes are global and standardized but each region needs the flexibility to be able to understand the global code and customize some aspects for its regions.

Which development model is optimized for this need?

- A. Use a managed package to deploy the global code and allow local teams to request the addition of code within that package.
- B. Use a managed package for global code and another managed package for all regions code.
- C. Create a centralized Git with all the code and where the global team approves the changes made by the local teams.
- D. Use unlocked packages to deploy the global code and allow each country to create its customized unlocked package extensions,

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 67

A team of developers at Universal Containers has developed Apex Triggers and Apex Classes in a sandbox. The team has also written test classes to unit test these triggers and classes. When executed in the sandbox, all the test methods pass and all the classes meet the minimum code coverage requirement. But when they tried deploying these components to production, a few of these test methods failed What should an architect recommend?

- A. Create test data in production before deploying the test classes
- B. Explicitly set SeeAllData to True and generate data in test methods.
- C. Set SeeAllData to True to use the data in production.
- D. Do not use SeeAllData and generate data in the test methods

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 68

Universal Containers (UC) is considering updating their Salesforce Release Management process. Which three best practices should UC consider for Release Management? Choose 3 answers

- A. Design the right sandbox strategy for the release.
- B. Publish a release calendar for each phase of the release.
- C. Release sign-off is only required for Production.
- D. Maintain a pre/post deployment checklist for each release.
- E. Regression testing is mandatory for each release.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 69

Which two environments are appropriate for creating a managed package? Choose 2 answers

- A. Developer Edition Org
- B. Developer Pro Sandbox Org
- C. Production Org with LMA
- D. Partner Developer Edition Org

Answer: A,D ([LEAVE A REPLY](#))

NEW QUESTION: 70

Universal Containers has automated its deployment process using Metadata API. However, they found that Metadata API does not support all the components yet.

What should be done to address this?

- A. Use AppExchange products to deploy unsupported components.
- B. Use the Force.com IDE for deploying the unsupported components.
- C. Deploy unsupported components manually before/after deployment.
- D. Use change sets for deploying all the unsupported components.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 71

Universal Container has multiple departments who use Salesforce and request changes: Sales, Service, Back Office, Marketing, etc. Each of these departments makes independent purchase decisions for AppExchange apps, field requests, and page layouts, resulting in low adoption and under -use of standard Salesforce capabilities. What mechanism should a Technical Architect recommend to increase use of standard Salesforce functionality?

- A. Project Management Office
- B. Center of Excellence
- C. Requirements Traceability Matrix
- D. Change Control Board

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 72

Universal Containers is considering developing a client application using the Metadata API for managing deployments to multiple Salesforce orgs. Which two use cases describe the usage of Metadata API? Choose 2 ans

- A. Migrate data changes between two organizations using a csv file.
- B. Migrate configuration changes between two organizations.
- C. Perform CRUD operations o manage records in the organization.
- D. Export current customization in the organization as an xml file.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 73

Universal Containers has a highly integrated environment with significant process orchestration between systems. When refreshing UAT, Objects that have external Ids from Production no longer point to valid External Ids in the UAT environment.

What should an Architect do to resolve this?

- A. In the post refresh plan, modify external ids to a known valid set of values for UAT.
- B. Let UAT point to production integrations and rollback each transaction after it finishes.
- C. Mask the External Id so nobody can see the production value.
- D. Delete all the data and use an Automated testing tool to create new data across all the systems in UAT.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 74

Universal Containers has several concurrent projects building new functionality, fixing bugs, and modifying existing functionality. Management would like features to be available to users as quickly as possible, even if the entire project is incomplete. What should an Architect recommend to maintain quality?

- A. Require developers to deploy completed code and unit tests directly to production
- B. Deploy all functionality together to ensure all functionality works together without error
- C. Use a spreadsheet to track approved changes that should be released with change sets
- D. Utilize automated source control, test, and build systems to test and deploy to production

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 75

Universal Containers has just completed several projects, including new custom objects and custom fields.

Administrators are having difficulty maintaining the application due to not knowing how objects and fields are being used.

Which two options should an Architect recommend? (Choose two.)

- A. Create design standards to consistently use the description field on custom objects.
- B. Create design standards to consistently use the description field on custom fields.
- C. Create design standards to require help text on all custom fields and custom objects.
- D. Create design standards with a document to store all custom objects and custom fields.
- E. Create design standards to require all custom fields on all custom object page layouts.

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 76

Universal Containers (UC) has received feedback from the field on several new feature requests that in business goals, UC is looking for a way to quickly get feedback and prioritize these requests. Which two options should an Architect recommend? Choose 2 answers

- A. Create design standards around the new features being requested.
- B. Send the requests to IT for a formal review at the end of the year.

- C. Present the feature requests at a Center of Excellence meeting.
- D. Create the backlog or priority list in a project management tool.
- E. Bring the feature request to the Test Manager to gain quality checks.

NEW QUESTION: 77

Universal Containers CUC) has multiple teams working on different projects. Multiple projects will be deployed to many production orgs. During code reviews, the architect finds inconsistently named variables and lack of best practices.

What should an architect recommend to improve consistency?

- A. Execute regression testing before code can be committed.
- B. Use static code analysis to enforce coding standards.
- C. Create a Center of Excellence for release management.
- D. Require pull requests to be reviewed by two developers before merging.

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 78

Universal Containers (UC) has received feedback from the field on several new feature requests that in business goals, UC is looking for a way to quickly get feedback and prioritize these requests. Which two options should an Architect recommend? Choose 2 answers

- A. Create the backlog or priority list in a project management tool.
- B. Present the feature requests at a Center of Excellence meeting.
- C. Create design standards around the new features being requested.
- D. Send the requests to IT for a formal review at the end of the year.
- E. Bring the feature request to the Test Manager to gain quality checks.

Answer: A,B ([LEAVE A REPLY](#))

NEW QUESTION: 79

Universal Containers has automated its deployment process using Metadata API. However, they found that Metadata API doesn't support all the components yet. What should be done to address this?

- A. Use the force.com IDE for deploying the unsupported components.
- B. Use AppExchange products to deploy unsupported components.
- C. Use change sets for deploying all the unsupported components.
- D. Deploy unsupported components manually before/after deployment.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 80

What are three advantages of using a Source Control system alongside a multi -sandbox development strategy?

Choose 3 answers

- A. Automatically deploy changes from sandbox to production
- B. Perform code reviews before promoting to a pre -production sandbox
- C. Keep a history of changes made by each developer
- D. Create a branching strategy that tracks each feature or change separately
- E. Act as a backup in case of catastrophic data loss

Answer: A,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 81

Universal Containers (UC) is a high-tech company using SFDX tools and methodologies for its Salesforce development. T UC has moved some of its code and configuration to Unlocked Packages.

Which two best practices should an architect recommend to support UC's new package development strategy?

(Choose two.)

- A. Move everything in the existing codebase to a single monolithic package
- B. Consult the metadata coverage report to identify features supported by packages
- C. Test developed packages in test environments before installing to production
- D. Version control does not need to be used, as packages manage all the code and configuration

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 82

Universal Containers (UC) is implementing a governance framework and has asked the Architect to make recommendations regarding release planning. Which two decisions should the Architect make when planning for releases? Choose 2 answers

- A. Whether Salesforce will wait to upgrade the pod until after a UC release is complete.
- B. How to roll back to the previous Salesforce release if there are issues.
- C. How to test existing functionality to ensure no regressions are introduced.
- D. When to test a new UC feature release if there are issues.

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 83

8. Universal Containers (UC) is embarked on an enterprise salesforce transformation journey, UC would like to streamline and automate deployment to different sandboxes during the build phase. Upon customer acceptance in UAT, the company requested to automate the production deployment as well.

As the deployment architect, what is the recommendation to satisfy the customer requirements?

- A.** Recommend using an AppExchange solution that packages the deployment components and you can run the deployment wizard to track deployment result.
- B.** Recommend using the ANT script and build a custom application to run the script and use change sets to deploy supported metadata.
- C.** Recommend using the Continuous integration and the Continuous deployment tool and build the pipeline to deploy to sandboxes and production.
- D.** Recommend using SFDX and documents the deployment commands with steps to be executed for each environment.

Answer: C ([LEAVE A REPLY](#))

NEW QUESTION: 84

What sandbox type would be appropriate for diagnosing reports of poor performance when accessing certain Visualforce pages?

- A.** Developer Sandbox.
- B.** Full Sandbox
- C.** Developer Pro Sandbox.
- D.** Partial copy Sandbox.

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 85

Universal Containers (UC) is midway through a large enterprise project. UC is working in an agile model, and currently has four-week iterations, with a branching strategy supporting this approach. UC operates in a strict regulatory environment, and has dedicated teams for security, QA, and release management. The system is live with users, and a serious production issue is identified at the start of a sprint, which is narrowed down to a bug in some Apex code.

Which three approaches should an architect recommend to address this bug?

Choose 3 answers

- A.** Fix the bug in a hotfix branch.
- B.** Investigate potential data impacts.
- C.** Seek stakeholder approval for the hotfix.
- D.** Attempt to fix the bug directly in production.
- E.** Wait until the next release to deploy the fix.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 86

Universal Containers' (UC) development team is using an Agile tool to track the status of build items, but only in terms of stages. UC is not able to track any effort estimates, log any hours worked, or keep track of remaining effort.

For what reason should UC reconsider using the Agile tool for effort tracking?

- A. Allows the management team to manage the performance of bad developers who are slacking off.
- B. Allows the organization to track the Developers' work hours for salary compensation purposes.
- C. Allows the management team to make critical timeline commitments based solely on developer estimates.
- D. Allows the Developer to compare their effort estimates and actuals to better adjust their future estimates.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 87

Universal Containers CUC) has been on the org development model with scratch orgs are already enabled, but they haven't been taking advantage of the scratch orgs.

Now UC is ready to move to the package development model.

What step must be done by an administrator?

- A. In setup, switch the Enable Unlocked Packages and Second-Generation Managed Packages to Enabled.
- B. In setup, switch the Enable Dev Hub to Enabled, then switch the Enable Source Tracking for Scratch Orgs to Enabled.
- C. In setup, switch both the Enable Dev Hub and Enable 2nd-Generation Managed Packages to Enabled.
- D. In setup, switch the Enable Unlocked Packages to Enabled, keep the Enable Second-Generation Managed Packages as disabled.

Answer: B ([LEAVE A REPLY](#))

NEW QUESTION: 88

Universal Containers is planning to release simple configuration changes and enhancements to their Sales Cloud. A Technical Architect recommended using change sets.

Which two advantages would change sets provide in this scenario? (Choose two.)

- A. The ability to deploy a very large number of components easily.
- B. An easy way to deploy related components.
- C. The ability to track changes to components.
- D. A simple and declarative method for deployment.

Answer: B,D ([LEAVE A REPLY](#))

NEW QUESTION: 89

Which two options should be considered when making production changes in a highly regulated and audited environment?

Choose 2 answers

- A. No manual steps should be carried out.
- B. All changes including hotfixes should be reviewed against security principles.
- C. After deployment, the development team should test and verify functionality in production.
- D. Any production change should have explicit stakeholder approval.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 90

Universal Containers (UC) has multiple development teams that work on separate streams of work, with different timelines. Each stream has different releases of code and config, and the delivery dates differ between them.

What is a suitable branching policy to recommend?

- A. Leaf-based development
- B. Trunk-based development
- C. Scratch-org-based development
- D. GitHub flow

Answer: ([SHOW ANSWER](#))

Explanation/Reference: <https://blog.logrocket.com/the-git-workflow-you-need-how-to-deal-with-multiple-teams-in-a-single-repository-faf5bb17a6e4/>

NEW QUESTION: 91

Which two options should be considered when making production changes in a highly regulated and audited environment? (Choose two.)

- A. After deployment, the development team should test and verify functionality in production
- B. Any production change should have explicit stakeholder approval
- C. No manual steps should be carried out
- D. All changes including hotfixes should be reviewed against security principles

NEW QUESTION: 92

Universal Containers (UC) just started configuration and customization of its Salesforce organization.

The architect suggested the definition of an application lifecycle management (ALM) process.

What are three benefits of following an ALM process?

Choose 3 answers

- A. Defining metrics for application development project success.
- B. Training new users after each minor and major release.
- C. Releasing new features on a consistent schedule.
- D. Preventing existing working functionality from stopping
- E. Avoiding defects from being deployed to production.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 93

Universal Containers (UC) is using Salesforce Performance Edition. They are planning to host weekly training sessions for the next four weeks. Each training will be five days long and a new set of trainees will attend every week. UC wants to train these users on samples of production data and delete all the data generated during the training session at the end of the week.

What optimal option should a technical architect recommend?

- A. Refresh a Developer Pro sandbox every weekend and load data needed using data loader.
- B. Refresh a Developer Pro sandbox every weekend and include an appropriate sandbox template.
- C. Refresh a Partial Copy sandbox every weekend and load data needed using data loader.
- D. Refresh a Partial Copy sandbox every weekend and include an appropriate sandbox template.

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 94

Universal Containers has developed teams working on multiple projects. They are exploring a source control tool to track and manage their code/config. What two benefits does a source control tool provide? Choose 2 answers

- A. Provides the ability to automatically identify issues in code/configuration.
- B. Provide the ability for distributed teams to work in isolation.
- C. Provides the ability to backup code/configuration changes.
- D. Provides automated code/configuration deployments.

Answer: B,C ([LEAVE A REPLY](#))

NEW QUESTION: 95

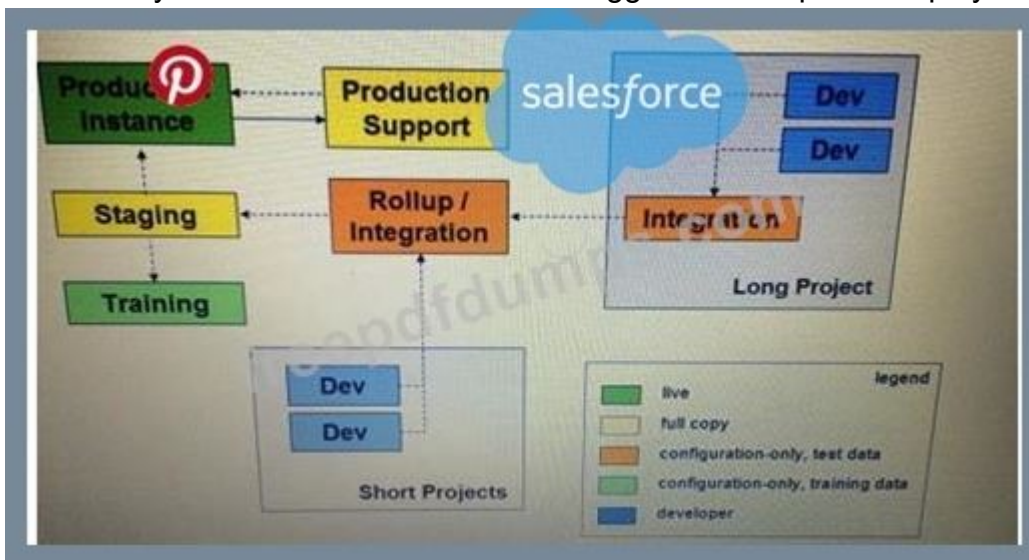

Universal Containers (UC) is developing a custom Force.com application. The following tools are used for development, the Force.com IDE for developing apps. Git as a source control system and a Git repository, and the Force.com Migration Tool for updating sandboxes from source control. UC's current branching strategy calls for two main branches: 1) Master 2) Develop Three supporting branches: 1) Feature 2) Release 3) Hotfix Consider that the branching strategy is in parallel as follows Feature |Develop |Release |Hotfix |Master What is the recommended practice strategy that Developers should adopt for Development?

- A. Developers work off of the Feature branch, which is pulled from the Develop branch, and the Feature branch is then merged with the Hotfix branch.
- B. Developers work off of the Feature branch, which is pulled from the Develop branch, and the Feature branch is then merged with the Develop branch.
- C. Developers work off of the Feature branch, which is pulled from the Release branch, and the Feature branch is then merged with the Develop branch.
- D. Developers work off of the Feature branch, which is pulled from the Master branch and the Feature branch is then merged with the Develop branch.

Answer: B (LEAVE A REPLY)

NEW QUESTION: 96

The release will be deployed over a weekend, one week after Salesforce updates the production environment (e.g., from Winter to Spring). UC has found that a full sandbox refresh can take several days. What should the architect suggest as an optimal deployment plan?

- A. Approximately six weeks before go -live, ensure the sandbox will be on the release preview. One week before go live, deploy to Staging. Deploy from Staging to Production at go-live
- B. One month before go -live, deploy to Staging and to Production Support. Deploy from Production Support to Production at go-live
- C. Two weeks before go -live, deploy to Staging and then refresh the Staging and Production support sandboxes. Deploy from Staging to Production at go-live
- D. One week before go -live, initiate the Staging sandbox refresh and then immediately deploy to Staging. Deploy from Staging to Production at go-live

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 97

What are three advantages of the package development model? (Choose three.)

- A. Facilitating automated testing and continuous integration
- B. Improving team development and collaboration
- C. Providing its own source control, so the source can be deployed in any sandbox orgs
- D. Eliminating the need of using change set, which should no longer be used as it can get messy working with package development models
- E. Significantly reducing the need for manually tracking changes

Answer: B,C,D ([LEAVE A REPLY](#))

NEW QUESTION: 98

Universal Containers CUC) is considering implementing a minor change policy for a series of low-risk user stories that are commonly received by the UC admins. The policy would allow admins to make these changes directly in production. UC does not have continuous integration/continuous delivery (CI/CD) in place.

Which three best practices should the architect suggest UC follow for their new change policy?

Choose 3 answers

- A. Downstream environments will not be automatically updated when production changes.
- B. All changes should still be tested.
- C. Minor changes do not need to be documented and can be made at any time.
- D. CI/CD is required in to successfully manage minor changes.
- E. Minor changes should be thoroughly documented and follow some type of standard cadence.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 99

Northern Trail Outfitters (NTO) has well-defined release management processes for both large and small projects. NTO's development team created a workflow and a trigger for the changes in its opportunity renewal process.

What should the architect recommend for release planning of these changes?

- A. Plan this as a major release and align with a Salesforce major release
- B. Plan this as a minor release with training and change management
- C. Plan this as a patch release and align with the Salesforce patch release
- D. Plan this an interim release after checking with Salesforce support

Answer: D ([LEAVE A REPLY](#))

NEW QUESTION: 100

Universal Containers CUC) is embarked on an enterprise salesforce transformation journey, UC would like to streamline and automate deployment to different sandboxes during the build phase.

Upon customer acceptance in UAT, the company requested to automate the production deployment as well.

As the deployment architect, what is the recommendation to satisfy the customer requirements?

- A.** Recommend using the ANT script and build a custom application to run the script and use change sets to deploy supported metadata.
- B.** Recommend using SFDX and documents the deployment commands with steps to be executed for each environment.
- C.** Recommend using an AppExchange solution that packages the deployment components and you can run the deployment wizard to track deployment result.
- D.** Recommend using the Continues integration and the Continues deployment tool and build the pipeline to deploy to sandboxes and production.

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 101

Which two project situations favor an Agile methodology? Choose 2 answers

- A.** A digitization project to update an existing customer -facing process and enable quick adjustments (Missed)
- B.** An environment with a heavy investment in DevOps capabilities for rapid testing and deployment (Missed)
- C.** A project with well-defined requirements and complex interactions between front- and back - end systems
- D.** A project to be executed by a third party, with a fixed and formal scope, budget, and timeline

Answer: B,D ([LEAVE A REPLY](#))

NEW QUESTION: 102

Universal Containers (UC) is on the Unlimited Edition of Salesforce orgs. Currently, there are four Developer Pro sandboxes used by dev teams for various purposes, one partial copy sandboxes used for training, one full sandbox used for user acceptance testing. There is another full sandbox used for performance testing during the initial launch, and it is no longer being actively used.

A system administrator had reported yesterday that none of the sandboxes can be refreshed.

What is the most probable action an architect can help the system administrator with?

- A.** It appears the org is using more sandboxes than the license permits. The Partial Copy sandbox shouldn't be used
- B.** Create a Salesforce support case, someone should know what is wrong
- C.** Delete the full sandbox used for performance testing
- D.** Contact the Salesforce Account Team to do a sandbox License Count

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 103

5. Universal Containers (UC) is planning to move to Salesforce Sales Cloud and retire its homegrown on-premise system. As part of the project, UC will need to migrate 5 million Accounts, 10 million Contacts, and 5 million Leads to Salesforce.

Which three areas should be tested as part of data migration?

Choose 3 answers

- A. Data transformation against source system
- B. Page layout assignments
- C. Contact association with correct Account
- D. Lead assignment
- E. Account and Lead ownership

Answer: A,B,C ([LEAVE A REPLY](#))

NEW QUESTION: 104

Universal Containers (UC) has decided to improve the quality of work by the development teams. As part of the effort, UC has acquired some code review software licenses to help the developers with code quality.

Which are two recommended practices to follow when conducting secure code reviews? (Choose two.)

- A. Focus on the aggregated reviews to save time and effort, to remove the need to continuously monitor each meaningful change
- B. Generate a code review checklist to ensure consistency between reviews and different reviewers
- C. Conduct a review that combines human efforts and automatic checks by the tool to detect all flaws
- D. Use the code review software as the tool to flag which developer has committed the errors, so the developer can improve

Answer: ([SHOW ANSWER](#))

Explanation

NEW QUESTION: 105

Answer: ([SHOW ANSWER](#))

NEW QUESTION: 109

Universal Containers has five development teams. The performance of the teams has been good, but the number of bugs has been increasing. After each sprint, they need more time to understand the code and make changes.

What are two ways to improve the performance?

Choose 2 answers

- A. Sprint review process.
- B. Define a team that will analyze/approve all changes.
- C. Define and follow code standards.
- D. Version control system to identify who is generating the bugs.

Answer: A,C ([LEAVE A REPLY](#))

NEW QUESTION: 110

Universal Containers (UC) environment management architect is using the package development model for deployment to different orgs.

Which metadata changes does the architect need to track manually?

- A. No manual tracking required. All changes are automatically tracked.
- B. Changes to components not yet supported by source tracking.
- C. Only the changes made via the Setup UI.
- D. All metadata changes for the release.

Answer: A ([LEAVE A REPLY](#))

NEW QUESTION: 111

Universal Containers (UC) is developing a new Customer Community. Requirements for the Community are not fully defined. UC is planning on using an Agile methodology for this work and has promised delivery of the complete system in three months. What are two risks associated with this approach? Choose 2 answers

- A. The functionality that can be delivered in 3 months is unknown, and may not meet the needs of the business (Missed)
- B. Given the lack of requirements and the three-month timeline commitment, the project may not be feasible (Missed)
- C. Agile does not allow for changes to requirements, so customers might not like the resulting solution
- D. Agile is not an appropriate development methodology for Customer Community implementations

Answer: A,B ([LEAVE A REPLY](#))
